GRADUATE MEDICAL EDUCATION IN THE UNITED STATES

ANNUAL REPORT AND DIRECTORY OF APPROVED INTERNSHIPS AND RESIDENCIES IN THE UNITED STATES, AND THE REQUIREMENTS OF EXAMINING BOARDS IN THE MEDICAL SPECIALTIES. PREPARED BY THE COUNCIL ON MEDICAL EDUCATION AND HOSPITALS OF THE AMERICAN MEDICAL ASSOCIATION

Arthur N. Springall, M.D., John Hinman, M.D., and Willard V. Thompson, M.D.

ANNUAL REPORT

The 32nd Annual Report on Internships and Residencies is submitted herewith, consisting of detailed information and statistical data on all intern and residency programs approved by the Council. Its primary purpose is to provide this information for recent medical school graduates beginning their professional careers and desiring to undertake graduate medical education and training. According to the present policy of the Council, approval is limited to programs in hospitals located in the continental United States, the Canal Zone, Hawaii, and Puerto Rico.

The report is based on detailed information furnished by each approved hospital. The data in the tables represent the intern and residency situation on Sept. 1, 1957. In many instances, these data vary from the statistics published in the Directory of Approved Internships and Residencies, as the latter refer to the internship and residency appointments beginning July 1, 1959.

Detailed explanations and interpretations are given on published statistical tables regarding internships and residencies; the function and results of the National Intern Matching Program are included and also information concerning the several intern and residency review committees.

Following the statistical report and interpretations is the Directory of Approved Internships and Residencies. In addition to the name and address of each hospital approved for internship, information is given concerning hospital control, number of beds, number of annual admissions, autopsy rate, length of internship, stipend, and number and types of internships offered. A list of Canadian internships approved by the Canadian Medical Association is included.

The residency section consists of information on residency programs in the various specialties in hospitals approved for training. Supplemental to the data presented, which are similar to information given in the internship section, the names of the

chiefs of services are listed. The geographical listing by state and city indicates the approved residencies in specialties which are offered by each hospital.

The Council is grateful for the cooperation and assistance of the medical staffs and the administrators of hospitals listed. This report is made possible by their assistance in furnishing the data required.

The following organizations collaborated with the Council in approving residency programs:

- Advisory Board for Medical Specialties
- American Academy of General Practice
- American Board of Anesthesiology
- American Board of Dermatology
- American Board of Internal Medicine
- Subspecialty Board on Allergy
- Subspecialty Board on Cardiovascular Disease
- Subspecialty Board on Gastroenterology
- Subspecialty Board on Pulmonary Diseases
- American Board of Neurological Surgery
- American Board of Obstetrics and Gynecology
- American Board of Ophthalmology
- American Board of Orthopedic Surgery
- American Board of Otolaryngology
- American Board of Pathology
- American Board of Pediatrics
- Subspecialty Board on Allergy
- American Board of Physical Medicine and Rehabilitation
- American Board of Plastic Surgery
- American Board of Preventive Medicine
- American Board of Proctology
- American Board of Psychiatry and Neurology
- American Board of Radiology
- American Board of Surgery
- American Board of Urology
- Board of Thoracic Surgery
- American College of Physicians
- American College of Surgeons

The annual report is available to medical students, interns and residents, hospital administrators, medical educators, and other individuals and organizations desiring information on graduate medical education. The entire report is reprinted as the Directory of Approved Internships and Residencies. Copies of this reprint may be obtained from the Council.

INTERNSHIP

During the past 10 years, there has been a gradual increase in the number of approved internships. Since 1952, the number of hospitals offering ap-

Mrs. Helen Neitzel and Mrs. Mildred Papak were responsible for much of the detail work in the preparation of the lists of approved internships and residencies, and the staff of the IBM Service was responsible for the statistical tabulations.

proved intern training programs has varied little more than 2% annually. Comparison of figures for the last 10 years may be made by reference to table 1, which indicates the number of hospitals offering approved internships and the number of positions offered. For the intern year 1957-1958,

TABLE 1.—Approved Hospitals and Internships, 1949-1958

	No. of Hospitals	No. of Internships
1949.....	807	9,124
1950.....	799	9,398
1951.....	828	10,044
1952.....	865	11,467
1953.....	856	11,006
1954.....	844	10,624
1955.....	850	11,648
1956.....	867	11,616
1957.....	852	11,895
1958.....	867	12,325

the number of hospitals offering intern training was 867, an increase of 2% from the figure for the preceding year. Positions offered increased 3% to a total of 12,325. Included in these statistics are figures submitted by hospitals in territories and possessions of the United States—one in the Canal Zone, four in Hawaii, and seven in Puerto Rico.

The disparity between the number of approved intern positions and the number of American medical school graduates available to fill them continues to increase. Approximately 7,000 students were graduated from American medical schools in 1957 as compared with 12,325 positions to be filled. The discrepancy is about 5,000 internships which either remained vacant or were filled by graduates of foreign medical schools. The average number of intern positions for each hospital has increased during the past 10 years from 11.3 to 14.2.

TABLE 2.—Number of Internships, by Type of Service, 1957-1958

* Number of intern training programs in 867 approved hospitals.

Internships, by Type of Service

The following three types of internships are approved by the Council: (1) rotating, which includes training on the medical, surgical, pediatric, and obstetric services; (2) mixed, offering training

in two or three of the four major clinical services; and (3) straight, which provides training on a single service. Although there is a numerical increase of 430 in intern positions, the relative distribution of these three types is approximately the same as for the preceding year—rotating internships 87.6%, mixed internships 1.6%, and straight internships 10.8%.

Table 2 indicates the breakdown of internships according to type of service and shows the number and percentage of positions filled on Sept. 1, 1957, for each type. There is little variation in these statistics from those of the previous year. The per-

* Includes 60 positions assigned to the U. S. Air Force.

centage filled on stated date were rotating 82%, mixed 89%, straight 87%. Of the straight internships, those in medicine showed the highest rate of occupancy 92%, and the lowest rate was for pathology, which was 66%. The status of the straight obstetrics-gynecology internship was clarified too late for interns to be reported on service on Sept. 1, 1957.

Although not indicated in the table, the majority of straight internships are offered in medical school-affiliated hospitals. On Sept. 1, 1957, there were 1,093 approved intern programs in 867 hospitals, offering 12,325 internships. Of this number, 10,198, or 83%, were filled. The same percentage (83%) of positions filled was published for 1956 and for 1955.

Internships, by Type of Hospital Control

Table 3 classifies internships according to type of hospital control. The largest group in this classification is comprised of the nongovernmental hospitals, of which there are 684, or 78.9%. The governmental (nonfederal) hospitals numbered 133 (15.3%); federal hospitals were 41 (4.7%); and the proprietary hospitals, the smallest group, included 9 (1%).

The occupancy rate (as of Sept. 1, 1957) for these hospitals varied from a high of 92% in the case of the federal hospitals to a low of 63% for the proprietary group. The rate for governmental (nonfederal) institutions was 87%, and that for the nongovernmental group was 80%.

TABLE 4.—Number of Internships, by Medical School Affiliation and Bed Capacity, 1957-1958

Classification	No. of Approved Hospitals	No. of Internships		
		Filled Sept. 1, 1957	Vacant Sept. 1, 1957	Percentage Filled
Nonaffiliated				
Less than 200 beds	138	686	163	81
200-299	260	1,796	560	76
300-499	200	2,109	514	80

300-499	24	282	53	84
500-over	10	213	35	86
Totals	71	693	199	78
Grand totals	867	10,198	2,127	83

The largest numerical increase in this group of hospitals appeared in the nongovernmental group; there were 684 hospitals offering 7,740 positions as compared with 670 hospitals providing 7,393 internships in 1956.

In the individual federal services, the Navy hospitals and Public Health Service hospitals reported all positions filled on Sept. 1, 1957; the Army showed 99% filled; the Veterans Administration hospitals were 50% filled. The figure of 223 positions filled shown by the Army includes 60 positions occupied by members of the Air Force; this number is in addition to the 23 interns shown in the single Air Force hospital that is approved for intern training.

The average number of interns on duty per hospital is 11.8 as compared with 11.6 for the preceding year. Federal hospitals averaged 14.9 interns per hospital, governmental (nonfederal) 25.3, non-

governmental 9.0, and proprietary hospitals 4.3. These figures do not vary appreciably from those for 1956.

For the past three years the number of intern positions filled has increased from 9,603 in 1955 to 9,893 in 1956 to 10,198 in 1957. While this numerical increase is present, it should be noted that the percentage of intern positions that has been filled each of these years has remained steady at 83%.

Internships, by Medical School Affiliation and Bed Capacity

In table 4, division of hospitals into three categories is made, classification being based on the degree to which medical schools utilize these hospitals for undergraduate medical education. A "major teaching hospital" is considered by the medical school as a major unit in its undergraduate clinical clerkship program. A "minor teaching hospital" indicates that the hospital is used to a limited extent for undergraduate training. Hospitals which are not designated by a medical school as participating in such a program are termed "nonaffiliated hospitals."

There are 140 major teaching hospitals, constituting 16% of the total number. These hospitals offered 4,333 intern positions, of which 88% were filled on Sept. 1, 1957. The 71 minor teaching hospitals constituted 8% of the total, and were 78% filled. The largest group is comprised of the non-affiliated hospitals, which number 656 and make up 76% of the total number. Of the 7,100 positions, 80% were occupied on Sept. 1, 1957. There has been an increase of 20 hospitals in this group since the preceding year.

On the basis of grouping by bed capacity, it is observed that the occupancy rate for hospitals of 200 beds and under and for hospitals of 200-299 beds is the same, 79%. Of the positions offered by hospitals having 300-499 beds, 83% were filled; and 88% of the positions offered by hospitals of over 500 beds were filled. As compared with similar statistics for 1956, there is an increase of 2% in the occupancy rate in the first three groups for 1957 and a decrease of 2% in hospitals having more than 500 beds for the same period.

Internships, by Census Region and States

Distribution of internships by geographical location appears in table 5, with numbers of positions filled and percentage occupancy given for each region and individual state.

Hospitals in United States territories and possessions and those in the New England area showed the highest rate of occupancy, 88%, on Sept. 1, 1957. The region having the lowest rate of occupancy was the East South Central area with 75%. Individual states with a rate of 90% or above were Canal Zone 100%, New Hampshire 100%, District of Columbia 95%, Louisiana 95%, Vermont 95%, Oregon 94%, New York 93%, Colorado 93%, Connecticut 92%, Iowa 92%, and New Jersey 90%. States having the lowest rates were Indiana, North Dakota, and Mississippi.

As has been noted in previous years, the Middle Atlantic states (New Jersey, New York, and Pennsylvania) offer more than one-quarter of all approved internships, and more than one-quarter of the interns serving on Sept. 1, 1957, were located in these three states.

There are still three states which do not offer approved intern training—Idaho, Nevada, and Wyoming.

Autopsy Rates

Table 6 is a listing of the 20 federal and 20 non-federal hospitals having the highest autopsy rates for the past year. These hospitals are to be com-

mended for their high autopsy rates, as the rate is considered to indicate the interest of the staff in medical education and in the scientific progress of medicine.

Thirteen of the 20 federal hospitals were listed last year, and 13 of the 20 nonfederal hospitals also were listed last year.

Hospitals offering approved intern training programs which fall below the 25% autopsy rate are being encouraged to raise the rate, as a rate below this minimum figure may be the basis for withdrawal of approval.

Internship Stipends

A study of the monthly stipends offered interns indicates that there has been an appreciable increase during the last several years. In order for a comparison to be made of present and past stipends, the average monthly stipend for interns serving in both affiliated and nonaffiliated hospitals was calculated, the upper level of the stipend range being used in order to be consistent with the method of calculation during previous years.

For affiliated hospitals, the average cash stipend paid in 1954 was \$87; in 1955, \$121; in 1956, \$141; and for the year beginning July 1, 1957, \$155. These figures show an increase of \$14 over the previous year. Nonaffiliated hospitals showed a similar increase—in 1954, \$136; in 1955, \$169; in 1956, \$177; and in 1957-58, \$197, an increase of \$20 over the preceding year.

The graph indicates the comparison of the stipend paid by the affiliated and the nonaffiliated hospitals. Cash stipend was furnished by all hospitals. This graph corresponds to the graph published for 1956-1957. Federal hospitals are not included in any of these stipend calculations.

In addition to the cash monthly stipend, 69% of the affiliated hospitals furnished full maintenance; 20% furnished partial maintenance; and 11% furnished no maintenance. In the nonaffiliated group, 83% offered full maintenance; 14% offered partial maintenance; and 3% indicated that no maintenance was furnished.

The stipend paid by the nonaffiliated hospitals averaged \$42 more than that given by the affiliated hospitals. The letters FM and PM, as used in the listings of internships, refer to "full maintenance" and "partial maintenance" respectively.

National Intern Matching Program

The National Intern Matching Program continues to serve as the central clearing agency for hospitals seeking interns and for medical students desiring internships. For the past seven years, hos-

pitals approved for intern training by the Council on Medical Education and Hospitals and medical students seeking first year internships have used the NIMP as the official agency for intern procurement. The plan gives complete freedom of choice to both hospitals and students and has received continued support from both groups.

Hospitals approved by the Council submit a Hospital Agreement to the program in which they agree to interview only students who participate in the program and to accept all interns matched to them. Students submit similar agreements, stating they will apply only to participating hospitals and will accept the hospital to which they are matched. Hospitals and students make contact with each other by means of the NIMP directory. Hospitals

Monthly internship stipends, with federal hospitals excluded. Solid line indicates nonaffiliated hospitals (627), dashed line, affiliated hospitals (199). Abscissa gives upper level of stipend range.

receive a directory of all participating students, and students receive a hospital directory in which are listed all participating hospitals and the type and number of internships each offers. Hospitals are free to interview as many applicants as possible, using any means of evaluation they desire.

The Matching Program has matched more than 42,000 students with no reported error to date. The policies and general management of the program are governed by the organizations most interested

Ward Darley, M.D., Executive Secretary, National Intern Matching Program, submitted the section entitled "National Intern Matching Program."

in medical education at the intern level. These organizations include, in addition to the Council on Medical Education and Hospitals, the American Hospital Association, the Association of American Medical Colleges, the Catholic Hospital Association, the American Protestant Hospital Association, and the Student American Medical Association. Further assistance is given by liaison representatives from the Army, Navy, Air Force, and the Public Health Service.

The program covers internships beginning April 1 and Dec. 31. In Program VII for 1958 internships, 819 hospitals offered 11,958 positions, while 7,131 students participated in the program. Of this number, 6,734 (94%) were matched. 88% of the matched students went to hospitals of their first or second choice. Conversely, 89% of the hospitals received medical students whom they had selected as first or second choice.

All of the above figures include those graduates of foreign medical schools who participated in Program VII. Out of the 376 participating, 224 were matched. For Program VIII (the next matching), NIMP will require certification by the Educational Council for Foreign Medical Graduates. This will undoubtedly reduce the number of foreign graduates participating in the next matching.

Internship Review Committee

The Internship Review Committee was formed in 1954 for the purpose of recommending to the Council action on intern training programs, following review of surveys submitted by the Field Staff of the Council. The Committee is also authorized to make recommendations to the Council for changes in internship requirements and for policy changes regarding intern education.

Membership on the Committee includes representatives of the Council on Medical Education and Hospitals, the Association of American Medical Colleges, the American Hospital Association, the Federation of State Medical Boards of the United States, and the American Academy of General Practice.

The primary objective of the Committee is the continuous improvement of the standards of medical education at the internship level. It allows a reasonable degree of flexibility in the interpretation of the Essentials of an Approved Internship; it urges the development of new ideas; and it encourages proper experimentation. It also gives a hospital having deficiencies in its training program a reasonable period of time in which to correct these deficiencies before approval of the internship is discontinued.

RESIDENCY REVIEW AND CONFERENCE COMMITTEES

The Residency Review and Conference Committees essentially represent a cooperative partnership through which the Council, the various specialty boards, the American College of Surgeons, the American College of Physicians, and the American Academy of General Practice are endeavoring to conduct objective and constructive programs of approval in graduate medical education. These committees are delegated authority by their parent organizations to approve residency training programs and authorize the listing of such programs in the annual Internship and Residency Number of THE JOURNAL.

Since they represent a liaison partnership with responsibilities for approval of residency training delegated to them by their parent organizations, it is important that any major changes in policy by a parent organization which might alter materially program approval are instituted only after discussion and mutual agreement. When the committees find it necessary to make recommendations regarding changes in standards, such changes are referred to the parent organizations for approval prior to implementation.

The objective of these committees, composed of representatives of the Council and other appropriate sponsoring bodies, is to insure that the best possible graduate medical education and training are provided at the residency level. The committees encourage the staffs of hospitals operating residency programs to maintain the training standards at a high level and to strive continually to elevate these standards of graduate medical education.

Bipartite committees, composed of representatives of the Council and the specialty board concerned, are those in anesthesiology, dermatology, neurological surgery, ophthalmology, orthopedic surgery, physical medicine, preventive medicine, proctology, psychiatry and neurology, radiology, and urology. The committees in surgery, plastic surgery, otolaryngology, and obstetrics-gynecology include representatives from the American College of Surgeons, in addition to the Council and the specialty boards. The committee for internal medicine includes representatives of the American College of Physicians, and the committee on pediatrics includes representatives of the American Academy of Pediatrics. The general practice committee is composed of members of the Council and the American Academy of General Practice.

The committee on obstetrics-gynecology has been established during the past year. There is no committee in pathology or in thoracic surgery.

The internal medicine committee is also responsible for the subspecialties of allergy, cardiovascular disease, gastroenterology, and pulmonary diseases. The committee on pediatrics includes the subspecialty of pediatric allergy. The subspecialties of aviation medicine, occupational medicine, and public health are the responsibility of the committee on preventive medicine. Committees meet at stated intervals, from once annually to three or four times annually.

Residencies by Specialty

In table 7 is presented the breakdown of the number of residencies into the particular specialties. Data concerning the number of first year appointments and the total number of appointments are quoted for each specialty, also the number of appointments filled and vacant as of Sept. 1, 1957, together with the percentage filled in each instance. The number of approved programs offered increased from 5,134 for the previous year to 5,299 this year. The total number of residencies offered by all programs was 30,595, an increase of 6% over the number of positions offered last year. Of this number 12,939, or approximately 40%, were first year residencies.

Training is offered in 26 specialties and in general practice. The residencies in contagious diseases and in malignant disease have been discontinued. While the majority of residency training programs are given in hospitals, some (in aviation medicine, occupational medicine, and public health) are given in other organizations or institutions.

The specialty offering the largest number of residency positions was surgery, with 5,924 positions offered; this was followed by internal medicine, with 5,401 positions offered. Obstetrics-gynecology held the third position with 2,525 residencies. The positions offered by these three specialties accounted for approximately one-third of the total number of residencies. The residencies in aviation medicine, dermatology, obstetrics-gynecology, ophthalmology, and surgery showed an occupancy rate of 90% or higher. The rate of 39% for public health was the lowest.

The over-all occupancy rate for all residencies was 82%, which was slightly higher than the figure of 81% for the previous year.

Residencies, by Type of Hospital Control

A breakdown of residencies by type of hospital control is shown in table 8. Federal hospitals numbered 125 in a total of 1,248 and offered 4,614 res-

idencies in a total of 30,595 positions. The Veterans Administration hospitals were responsible for 3,258 residencies, which is 11% of the total number offered. State, county, and city hospitals offered 10,834 positions; the city hospitals being highest in this category with 3,339 positions. Nongovernmental hospitals were responsible for 14,800 residency positions and proprietary hospitals for 250. The figures for the subspecialties of preventive medicine (aviation medicine, occupational medicine, and public health) are quoted in a separate category, since organizations other than hospitals offered training in these specialties.

TABLE 7.—Number of Residencies, by Specialty, 1957-1958

Specialty	No. of Approved Programs	No. of Residencies					
		First Yr. Appointments			Total Appointments (All Yr.)		
		Filled Sept. 1, 1957	Vacant Sept. 1, 1957	Percentage Filled	Filled Sept. 1, 1957	Vacant Sept. 1, 1957	Percentage Filled

Surgery	686	1,966	213	90	5,364	560	90
Thoracic surgery	96	86	13	87	194	28	87
Urology	227	176	55	76	540	144	79
Totals	5,299	10,687	2,252	83	24,976	5,619	82

The occupancy rate for federal hospitals on Sept. 1, 1957, was 75%. The rate for governmental non-federal hospitals was 84%, that for nongovernmental hospitals 82%, and the rate for proprietary hospitals 79%. The over-all occupancy rate for all hospitals and other groups offering residency training was 82%, a 1% increase since last year.

Residencies, by Hospital Bed Capacities

Table 9 indicates the number of residencies according to classification by bed capacity. The largest group of hospitals in this classification has more than 500-bed capacity; this group offered 16,460

residencies, or half the residencies available. The highest percentage of positions filled on Sept. 1, 1957, was in the 50-99 classification, with 89% filled; the group of hospitals having more than 500 beds was 88% filled on the same date.

Again, the subspecialties in preventive medicine (aviation medicine, occupational medicine, and public health) are placed in a separate category as training in these specialties is not under hospital control. It is noted that the number of approved hospitals is 1,248 in comparison with 1,199 for the previous year, and the number of approved programs is 5,299, comparing with 5,134 programs last year. The over-all occupancy rate is 82%.

RESUME

This 32nd Annual Report contains factual information and statistical data on approved internships and residencies in the United States and its territories and possessions. This information is presented to assist medical students, interns, and residents in choosing programs of medical training at

the graduate level where they may continue their medical education. Analysis is made of statistical tables presented, and there are brief write-ups on the National Intern Matching Program and the review committees on internships and residencies. The report is followed by complete lists of hospitals

TABLE 9.—Number of Residencies, by Bed Capacity, 1957-1958

and other institutions offering approved internships and residencies, with detailed information regarding each program.

The number of approved internships, 12,325, shows a 4% increase over the figure of 11,895 positions offered the previous year. The number of approved residencies also increased 6%, with 30,595 positions offered as compared with 28,528 last year. A total of 6,392 programs was offered this year, compared with 6,235 programs last year. The number of hospitals and other institutions offering graduate training increased from 1,372 to 1,400. Of this number, 141 offered intern training only, 537 gave resident training only, and 722 were approved for both intern and resident training.

The occupancy rate for internships on Sept. 1, 1957, was 83%, the same as for the previous year. The rate for residencies on the same date was 82%, an increase of 1% over last year's figure.

The review committees are functioning effectively for the internship, for 17 specialty fields, and for general practice. There are no review committees for two specialties. Graduate training has been offered in 27 fields.

The Council has presented this report in the hope that it will be helpful to all individuals interested in medical education at the internship and residency levels.

APPROVED INTERNSHIPS

Council on Medical Education and Hospitals of the American Medical Association
535 North Dearborn Street, Chicago 10

Revised to September 1, 1958

HOSPITALS, 853 INTERNSHIPS, 12,626

The following general hospitals, investigated and approved by the Council on Medical Education and Hospitals, are considered in position to furnish acceptable intern training in accordance with standards adopted by the American Medical Association. Three types of internships are approved by the Council—rotating, mixed, and straight:

1. A rotating internship is defined as one that provides supervised experience in internal medicine, surgery, pediatrics, obstetrics, and their related subspecialties, together with experience in laboratory and radiologic diagnosis.

2. A mixed internship is defined as one that provides supervised experience in two or more, but not in all, of the clinical divisions named.

3. A straight internship is defined as one that provides supervised experience in a single department, although it may include limited opportunity for work in a related subspecialty. Straight internships are now approved in internal medicine, surgery, pediatrics, pathology, and obstetrics-gynecology.

Hospitals approved for internships that are used by medical schools for undergraduate clinical clerkships on inpatient services have been identified in the following lists by the symbols X and x. Hospitals have been identified with symbol X when a medical school has indicated that the hospital is a major unit in the school's teaching program. Hospitals have been identified with the symbol x when a medical school has indicated that the hospital is used to a limited extent in the school's teaching program. Certain internships in hospitals designated as teaching hospitals may not provide for assignments to teaching services. Other internships may provide for only a portion of the internship period being spent on teaching services. Prospective interns desiring specific information concerning internship assignments to teaching services in a hospital are advised to communicate with the dean of the medical school with which the hospital is affiliated. Medical school affiliations are indicated by footnotes 10 to 90 placed immediately after the symbol X or x. The list of medical schools appears on page 553. The plus (+) sign indicates additional approval for residencies in specialties, as shown in the Council's list of Approved Residencies and Fellowships. The beginning stipends for Federal hospitals have not been listed; they are established in accordance with government pay tables. When applying for internships in Air Force, Army, Navy, or Public Health Service hospitals, applications should be directed to the medical departments of the Air Force, Army, Navy, or the United States Public Health Service and not to the individual hospitals. Although applications are made to the service rather than to individual hospitals, all of the services ask students to list three hospitals in order of preference. Every possible effort is made to place successful candidates in accordance with their desires. Because of the needs of the service it should be understood that students may, in some instances, be assigned to other hospitals than those for which they have indicated a preference.

Hospitals listed below (pages 529 to 552) make first year internship appointments through the National Intern Matching Program, Inc. The number and type of internships as listed represent appointments for the intern year 1959-1960.

Name of Hospital and Location	Control	Total Beds	FEDERAL						Number and Type of Internships	Code Number

Hospitals designated with an asterisk (*) in this listing do not participate in the National Intern Matching Program, sponsored by the American Medical Association, the American Hospital Association, the Association of American Medical Colleges, and other cooperating organizations. Abbreviations and other references will be found on pages 553 through 555.

HOSPITALS APPROVED FOR INTERNSHIPS IN THE DOMINION OF CANADA

The following list of hospitals that conform to the standards of the Canadian Medical Association is published for the information of graduates interested in an internship appointment in a Canadian hospital. Hospitals that are unqualifiedly approved as conforming to the standards of the Canadian Medical Association may be considered as offering internships equivalent in educational value to those in hospitals approved for intern training by the Council.

This list, revised to June 15, 1958, was furnished by the Canadian Medical Association.

Name of Hospital	Location	Name of Hospital	Location	Name of Hospital	Location
Royal Columbian Hosp. New Westminster, B. C.		Hamilton General Hospital	Hamilton, Ont.	Metropolitan General Hospital	Windsor, Ont.
Trail-Tadanan Hospital	Trail, B. C.	St. Joseph's Hospital	Hamilton, Ont.	Hotel-Dieu Saint-Vallier	Chicoutimi, Que.
St. Paul's Hospital	Vancouver, B. C.	Hotel-Dieu Hospital	Kingston, Ont.	Hospital St. Luc	Montreal, Que.
Vancouver General Hospital	Vancouver, B. C.	Kingston General Hospital	Kingston, Ont.	Hotel-Dieu de Montreal	Montreal, Que.
Royal Jubilee Hospital	Victoria, B. C.	Kitchener-Waterloo Hospital	Kitchener, Ont.	Jewish General Hospital	Montreal, Que.
St. Joseph's Hospital	Victoria, B. C.	St. Joseph's Hospital	London, Ont.	Maisonneuve Hospital	Montreal, Que.

ABBREVIATIONS AND NOTES

- | | | | | |
|--|--------|---------------------------------------|-----|---------------------|
| 1. Appointments available to women applicants | CyCo | City and County | Req | Required |
| 2. Appointments restricted to women applicants | Corp | Corporation unrestricted as to profit | FM | Full maintenance |
| 3. Appointments available to graduates of foreign medical schools. Details regarding requirements for appointment can be secured from the hospitals concerned. | Dist | Hospital District | PM | Partial maintenance |
| 4. Dental internships available | NPCorp | Nonprofit corporation | | |
| 5. Available to citizens of the United States only | Part | Partnership | | |
- * The plus sign indicates additional approval for residencies in specialties, as shown in the Council's list of Approved Residencies and Fellowships.

Medical School Affiliations

Footnotes 10 to 90 refer to medical schools affiliated with hospitals for undergraduate clinical clerkships. Hospitals have been identified with symbol X when a medical school has indicated that the hospital is a major unit in the school's teaching program. Hospitals have been identified with symbol x when a medical school has indicated that the hospital is used to a limited extent in the school's teaching program.

APPROVED RESIDENCIES AND FELLOWSHIPS

Council on Medical Education and Hospitals of the American Medical Association

535 North Dearborn Street, Chicago 10

Revised to August 15, 1958

Hospitals, 1,276; Assistant Residencies and Residencies, 31,665

The following services are approved by the Council on Medical Education and Hospitals as meeting the requirements of the Essentials of Approved Residencies and Fellowships. In those specialties in which certifying boards have been established approval is extended in concurrence with the Board concerned as indicated. The number of years of training for which approval has been granted is indicated in the column, "Length of Approved Program (years)." Residencies in which this designation does not appear have been approved without specifying the number of years for which they are accredited. The beginning stipends for Federal hospitals have not been listed; they are established in accordance with government pay tables.

INDEX TO LIST

14. ORTHOPEDIC SURGERY

Type of training acceptable to Board: A—Adult Orthopedics; C—Children's Orthopedics; F—Fractures. Residency programs in the following hospitals have been approved by the Council and the American Board of Orthopedic Surgery, through the Residency Review Committee for Orthopedic Surgery, as offering acceptable training in adult orthopedics, children's orthopedics, and fractures. Training in the basic sciences is given either as an integral part of these services or as a separate course. Services collaborating in an integral plan of training are designated by a program number, a list of which is found on pages 594 through 596.

Residents completing their training in these hospitals are eligible for full certification by the American Board of Orthopedic Surgery, including children's orthopedic surgery.

14. ORTHOPEDIC SURGERY—Continued

Residency programs in the following hospitals have been approved by the Council and the American Board of Orthopedic Surgery, through the Residency Review Committee for Orthopedic Surgery, as offering acceptable training in adult orthopedics and fractures. Training in the basic sciences is given as an integral part of these services or as a separate course. Services collaborating in an integral plan of training are designated by a program number, a list of which is found on pages 594 through 596.

Residents completing three years of training in Adult Orthopedics and Fractures at these hospitals are eligible for limited certification by the American Board of Orthopedic Surgery, not to include children's orthopedic surgery.

Hospitals, 16; Assistant Residencies and Residencies, 56

17. PEDIATRIC ALLERGY

Residency programs in the following hospitals have been approved for TWO years of training by the Council, the American Academy of Pediatrics, the American Board of Pediatrics, and the Sub-Specialty Board of Pediatric Allergy, through the Residency Review Committee for Pediatrics. (Applicants intending to qualify for examination by the Sub-Specialty Board of Pediatric Allergy of the American Board of Pediatrics, should refer to the Board Requirements on Page 678, and the explanatory footnote (*) on "Mixed," "Adult" and "Pediatric" categories below.)

Hospitals, 15.

Name of Hospital	Location	Chief of Service
University of California Hospital	Los Angeles	E. M. Heimlich
University of California Hospital	San Francisco	W. C. Deamer-T. L. Nelson
University of Colorado Medical Center	Denver	M. F. Smelzer
Colorado General Hospital	Denver	
Denver General Hospital	Denver	
Children's Hospital	Washington, D. C.	R. H. Todd
Michael Reese Hospital	Chicago	M. M. Mosko-A. Matheson
Children's Medical Center	Boston	H. L. Mueller
*Mayo Foundation	Rochester, Minn.	G. B. Logan
*Children's Hospital	Buffalo	V. L. Cohen
*Roosevelt Hospital	New York City	R. A. Cooke
*Strong Memorial—Rochester		
Municipal Hospitals	Rochester, N. Y.	J. Glaser
Duke Hospital	Durham, N. C.	S. C. Dees
*Rhode Island Hospital	Providence, R. I.	S. S. Freedman
Children's Medical Center	Dallas, Texas	S. Halpern
*University Hospitals	Madison, Wis.	S. B. Crepea

The total residency programs in Allergy at these centers also include Adult Allergy. Accordingly, residency programs in centers with the symbol () are in the "Mixed" category referred to under Board Requirements on page 680. Reference should also be made to the listing of hospitals approved in Allergy on page 561. Residency programs in these hospitals are in the "Adult" category referred to under Board Requirements on page 680. All other residency programs listed above under Pediatric Allergy, are in the "Pediatric" category referred to on page 607.

18. PEDIATRICS

Residency programs in the following hospitals have been approved by the Council, the American Academy of Pediatrics and the American Board of Pediatrics, through the Residency Review Committee for Pediatrics, as offering full training in the specialty: (i. e., TWO or more years).

Hospitals, 254; Assistant Residencies and Residencies, 1,779

* Estimated.

- (a) Excludes the city of Wilmington.
 (b) To those planning to work in state.
 (c) Excludes Chicago, Evanston, Oak Park, Stickney Township, and Winnetka (including Glencoe, Kenilworth, Northbrook, and remainder of New Trier Township), all with full-time health officers.
 (d) Assistance can be arranged for securing the MPH degree during or immediately after the first residency year. Appointments can be effective the first of any month. Appointments normally are limited to those training for service in Illinois. Exceptions may be made in special cases.
 (e) Training is given under one director in both the City and County Health Departments.
 (f) Arrangements for remuneration made on an individual basis.
 (g) 43 city-county or county health departments and 6 city health departments in which training may be given depending upon local conditions and the needs and desires of the resident.
 (h) State of Georgia with emphasis on 6 major districts.
 (i) Assistance can be arranged for securing the MPH degree after successful completion of residency experience. Appointments will be limited to those training for service in Oregon.
 (j) Combined one year program Fort Dix Health Center, Fort Dix., N. J., and Headquarters First U. S. Army, Preventive Medicine Division, Governor's Island, New York City, for second year of field training.
 (k) Training is given in any one of 10 city health departments, 19 county health departments, or 14 district offices within the state.
 (l) Training to be with Michigan Department of Health, with field experience in local health departments.
 (m) Includes training at Montefiore Hospital.
 (n) Combined one year of training, second year of field training, Fort Ord and Presidio of San Francisco, Calif.
 (o) Stipend offered only to those residents who plan to remain in public health work in the state at least six years.
 (p) Arrangements for remuneration made upon determination of field of interest and location desired.
 (q) City of Portland population (412,100) is not included in this 1957 State Census estimate.

22. PROCTOLOGY

Residency programs in the following hospitals have been approved by the Council and the American Board of Proctology, through the Residency Review Committee for Proctology, as offering acceptable training in the specialty.

PSYCHIATRY PROGRAM IDENTIFICATION

10. Service in child psychiatry.
11. Six months service at Los Angeles County Hospital, Los Angeles.
12. Nine months service at Mount Zion Hospital, six months at Langley Porter Clinic and service in child psychiatry, San Francisco.
13. Three months of service at Napa State Hospital, San Francisco Hospital, Strickton State Hospital, Sonoma State Home and San Quentin Prison; and six months at Colwell Memorial Hospital.
14. Three months service at Fort Miley Veterans Administration Hospital, San Francisco, and Langley Porter Clinic, San Francisco; may include elective services at University of California Hospital, Mount Zion Hospital and Stanford University (Lane) Hospital, San Francisco.
15. Three months service at Pacific Colony Hospital, Pomona, and three months service in child psychiatry at Camarillo State Hospital.
16. Affiliate services at Colorado General and Denver General Hospitals.
17. Affiliate service at Veterans Administration Hospital, West Haven, Connecticut State Hospital, Fairfield State Hospital, Norwich State Hospital and service in child psychiatry.
18. Twelve months service at Grace-New Haven Community Hospital, New Haven, Connecticut.
19. Six months service at Governor Bacon Health Center, Delaware City.
20. Two months service at George Washington University Hospital, Washington, D. C.
21. Affiliate service at University Hospital, Augusta, Georgia.
22. Twelve months service at the Neuropsychiatric Institute of the University of Illinois including service in child psychiatry.
23. Eighteen months affiliate service including service at the Neuropsychiatric Institute of the University of Illinois and three months in child psychiatry.
24. Affiliate service in Neuropsychiatric Institute of the University of Illinois and service in child psychiatry.
25. Three months service at Veterans Administration Hospital, Downey, Illinois, and service in child psychiatry.
26. Six months service at Veterans Administration Hospital, Hines, Illinois. May include service in child psychiatry.
27. Six months service in child psychiatry.
28. Integrated program including service at Veterans Administration Hospital, Indianapolis General Hospital and Indiana University Medical Center and Affiliated Hospitals, Indianapolis.
29. Integrated program including service at Veterans Administration Hospital, Menninger Sanitarium and Topeka State Hospital, Topeka, Kansas.
30. Four months service at University of Louisville Services, Louisville, Kentucky, and four months service at Cincinnati General Hospital, Cincinnati, Ohio.
31. Three months service at University of Louisville Services, Louisville, Kentucky.
32. Twelve months service at University of Louisville Services. May include four months service at Central State Hospital; four months service at Louisville General Hospital.
33. Four months service at Central State Hospital and service in child psychiatry.
34. Integrated program including service at Tulane University Unit, Charity Hospital, New Orleans, and Veterans Administration Hospitals, New Orleans, and Bloxi, Mississippi.
35. Six months service in child psychiatry and twelve months service at South Louisiana State Hospital.
36. Service in child psychiatry.
37. Three months service in child psychiatry at Johns Hopkins Hospital (Harriet Lane House), Baltimore, Maryland.
38. Twelve months service at Boston State Hospital and service in child psychiatry.
39. Twelve-eighteen months service at Veterans Administration Hospital, Boston (Jamaica Plain), Massachusetts, and six months service in child psychiatry.
40. Integrated program including service at Massachusetts General Hospital and McLean Hospital, Waverly; may include 1 year training in child psychiatry at James Jackson Putnam Children's Center.
41. Twelve months service at University Hospital, Ann Arbor, Michigan.
42. University Hospital, Ann Arbor, Michigan.
43. Three months service at Coldwater State Home and Training School, Caro State and Ionia State Hospitals and service in child psychiatry.
44. Six months service in child psychiatry at Children's Hospital, Detroit.
45. Six months service at Receiving Hospital, Children's Hospital, Detroit, and Wayne County General Hospital and Infirmary, Eloise, Michigan.
46. University of Minnesota Hospitals, Minneapolis, Minnesota.
47. Three months service at Rochester State Hospital, Rochester, Minn.
48. Affiliate service at Barnes Hospital, St. Louis and three months at St. Louis State Hospital.
49. Six months service at Barnes Hospital, St. Louis, Missouri.
50. Service at St. Louis State Hospital and St. Louis City Hospital.
51. Service at Lutheran Hospital, Omaha.
52. Service at University of Nebraska Hospital.
53. Affiliate service at University of Nebraska Hospital and Creighton Memorial-St. Joseph Hospital, Omaha, Nebraska.
54. Six months service at Newark City Hospital; three months at New Jersey State Hospital and three months in child psychiatry.
55. Three months service at Albany Hospital, Albany, New York.
56. Affiliate services at Edward J. Meyer Memorial Hospital and Buffalo State Hospital.
57. Six months service at King's County Hospital, Brooklyn, New York.
58. Integrated program with service at Bellevue Hospital Center and University Hospital.
59. Six months service at Mount Sinai Hospital, New York City.
60. Service in child psychiatry. May include six months service at Mount Sinai Hospital and three months at Manhattan State Hospital.
61. Twelve months service at New York Hospital and four months at Veterans Administration Hospital, New York City (Bronx), New York.
62. Three months service at Grasslands, Rockland State, Albany Hospitals and Letchworth Village.
63. Six months service at Rochester State Hospital, Rochester, New York.
64. Six months service at Strong Memorial-Rochester Municipal Hospitals, Rochester.
65. Affiliate service at Strong Memorial-Rochester Municipal Hospitals.
66. Three months service at Syracuse Memorial, Binghamton, Syracuse and Willard State Hospitals, service at Craig Colony and service in child psychiatry.
67. Affiliate service at State Hospitals at Raleigh and Butner, North Carolina.
68. Eighteen months service at Duke Hospital, Durham, North Carolina.
69. Includes rotation through Central (Mental Hygiene) Clinic of the Community Chest, Child Guidance Home, Longview State Hospital, Jewish Hospital.
70. Integrated program including service at Cleveland Clinic and Windsor Hospital.
71. Integrated program including service at University Hospital and Veterans Administration Hospital, Cleveland, Ohio.
72. Integrated program with service at Institute of the Pennsylvania Hospital and Pennsylvania Hospital Department for Mental and Nervous Diseases.
73. Affiliate service at Temple University Hospital, Institute of Pennsylvania, Hospital of the Woman's Medical College of Pennsylvania.
74. Six months service at Philadelphia General Hospital and service in child psychiatry.
75. Two months affiliate service for institutional care.
76. Integrated program including service at Vanderbilt University Hospital, Veterans Administration Hospital, Nashville, Veterans Administration Hospital, Murfreesboro, and Central State Hospital, Nashville.
77. Four months affiliate service at St. Mary's Infirmary, Galveston, Texas.
78. Service in child psychiatry at Jefferson Davis Hospital, Houston, Texas.
79. Six months affiliate service at Veterans Administration Hospital, Salt Lake City, Utah, and affiliate services at State Hospital, Provo, Utah.
80. Integrated program including service at University of Virginia Hospital, Charlottesville and Veterans Administration Hospital, Roanoke, Va.
81. Affiliate service at Southwestern State Hospital, Marion and Lynchburg State Colony, Lynchburg, Va.
82. Six months service at Medical College of Virginia—Hospital Division, Richmond, and service in child psychiatry.
83. Six months service at Veterans Administration Hospital, American Lake, Washington, and six months in child psychiatry.
84. Illinois Mental Health Service program under the direction of the Illinois State Psychopathic Institute.

Numerical and other references will be found on pages 640 through 642.

24. PULMONARY DISEASE

Residency programs in the following hospitals have been approved for ONE year of training by the Council and the Subspecialty Board for Pulmonary Disease of the American Board of Internal Medicine, as offering acceptable training in the specialty.

Hospitals, 115; Assistant Residencies and Residencies, 363.

25. RADIOLOGY

Residency programs in the following hospitals have been approved by the Council and the American Board of Radiology through the Residency Review Committee for Radiology. These programs are approved for THREE years of training in all phases of Radiology. All programs listed offer three years of training intramurally, or on an integrated basis, or through affiliation with another approved institution. Hospitals listed with the following symbol (#) are approved and offer training of three years intramurally, in addition to participating in an integrated residency program.

Hospitals, 371; Assistant Residencies and Residencies, 1,831

NUMERICAL AND OTHER REFERENCES.

1. Appointments available to women applicants.
2. Appointments available to women applicants only.
3. Appointments available to graduates of foreign medical schools.
4. Training at the third year level only.
5. May include one year fellowships in the Department of Cardiology.
6. May include one year of training at Cook County Hospital, Chicago, by special arrangement.
7. May include one year of surgical research at Louisiana State University School of Medicine.
8. Includes fellowships.
9. In addition to three intramural years at White Memorial Hospital, coordinated three year program: White Memorial Hospital affords two years, Presbyterian Hospital-Olmstead Memorial Hospital, one year. Residents should apply to White Memorial Hospital.
10. In addition to three intramural years at Veterans Administration Hospital, coordinated three year program: Touro Infirmary affords one year, Veterans Administration Hospital final two years. Residents should apply to Veterans Administration Hospital.
11. Coordinated three year program: Peter Bent Brigham Hospital affords two years, Veterans Administration Hospital, West Roxbury, Mass., one year. Residents should apply to Peter Bent Brigham Hospital.
12. In addition to three intramural years at Lincoln Hospital, coordinated three year program: Lincoln Hospital affords two years, Hackensack Hospital one year. Residents should apply to Lincoln Hospital.
13. Approved Category I. Residents interested should consult J. A. M. A., Vol. 168, No. 5, pp. 674-678, Oct. 4, 1958.
14. Coordinated three year program: St. Vincent's Hospital affords two years, Maumee Valley Hospital, one year. Residents should apply to St. Vincent's Hospital.
15. In addition to three intramural years at Graduate Hospital of the University of Pennsylvania, coordinated three year program: Graduate Hospital affords two years, final year at Mercy Hospital. Residents should apply to Graduate Hospital.
16. In addition to three intramural years at City of Memphis Hospitals, coordinated three year program: City of Memphis Hospitals affords two years, Baptist Memorial Hospital one year. Residents should apply to City of Memphis Hospitals.
17. In addition to three intramural years at King County Hospital, Unit No. 1 (Harborview); coordinated three year program: King County Hospital affords two years, final year at Veterans Admin. Hospital, Seattle. Residents should apply to King County Hospital.
18. Training limited to Contagious Diseases.
19. In addition to three years in Internal Medicine, one year of training in Hematology is available.
20. Also includes affiliating training at the Veterans Administration Hospital, Boston (Jamaica Plain), Mass.
21. Combined integrated program—Bellevue Div. II (Cornell and Memorial Cancer Center.)
22. Training in pediatric psychiatry (third year level).
23. To include one year of affiliate training at the second year level at the University Hospitals (Lakeside) Cleveland.
24. This one year of training is equivalent to one year of basic science as a part of an approved three year program.
25. One year of clinical investigation available.
26. An additional one year of fellowship training in cardio-pulmonary laboratory is available.
27. Includes one year of training at Veterans Administration Hospital, Iowa City.
28. Provides training at the third year level, affiliate training with University of Minnesota Hospitals, Minneapolis.
29. Approved for affiliate training only.
30. Obstetrical and Gynecological pathology only.
31. Special pathology as a part of pathologic anatomy. See Board requirements.
32. Approved Category P. Residents interested should consult J. A. M. A., Vol. 168, No. 5, p. 674-678, Oct. 4, 1958.
33. LaRabida Sanitarium, Lewis Memorial Maternity Hospital, Municipal Contagious Disease Hospital, St. Joseph Hospital, St. Vincent's Hospital, Chicago.
34. Methodist Hospital and St. Francis Hospital Divisions.
35. Affiliate rotation at Yale-New Haven Medical Center, Grace-New Haven Community Hospital.
36. Six months of training is afforded at University Hospitals, Iowa City.
37. Offer training at the third year level only.
38. In addition to the three year program at Bellevue Medical Center, Division I, another program has been approved for two years of training which includes rotation on the following services: Columbia University Division and Medical Chest Service, Bellevue Hospital, Columbia Research Division, Goldwater Memorial Hospital, Medical Service, Francis Delafield Hospital.
39. Includes one year of training at Parkland Memorial Hospital, Dallas, Texas.
40. Approved for training at the first year level.
41. Previous internship not required.
42. Approved Category H. Residents interested should consult J. A. M. A., Vol. 168, No. 5, pp. 674-678, Oct. 4, 1958.
43. Approved Category J. Residents interested should consult J. A. M. A., Vol. 168, No. 5, pp. 674-678, Oct. 4, 1958.
44. Includes one year fellowship in the cardiopulmonary laboratory.
45. Provides one year of training at third year level as part of three-year program at City of Memphis Hospitals.
46. Includes one year of training at State University of Iowa Hospitals, Iowa City.
47. One year of approved resident training in Pulmonary Diseases is offered at each the University of Kansas Medical Center, Kansas City, Kan., and the Veterans Admin. Hospital, Kansas City, Mo.
48. In addition to three intramural years at Sinai Hospital, Baltimore, coordinated three-year program: Sinai Hospital affords first two years, Fordham Hospital one year (third yr.). Residents should apply to Sinai Hospital.
49. Coordinated three-year program: Bayonne Hospital and Dispensary affords two years; Jersey City Medical Center, Jersey City, one year. Residents should apply to Bayonne Hospital and Dispensary.

REQUIREMENTS FOR CERTIFICATION

AMERICAN SPECIALTY BOARDS

Examining and certifying boards in 19 specialties have been approved by the Council on Medical Education and Hospitals of the American Medical Association and the Advisory Board for Medical Specialties on the basis of minimal standards governing accreditation of specialty boards as formulated by the Council.

The primary purposes of the boards are (1) to conduct investigations and examinations to determine the competence of voluntary candidates for certificates issued by the respective boards, (2) to grant and issue certificates of qualification to candidates successful in demonstrating their proficiency, (3) to stimulate the development of adequate training facilities, (4) to aid in evaluating residencies and fellowships under consideration by the Council on Medical Education and Hospitals of the American Medical Association, and (5) to advise physicians desiring certification as to the course of study and training to be pursued.

The boards are in no sense educational institutions, and the certificate of a board is not to be considered a degree. It does not confer on any person legal qualifications, privileges, or a license to practice medicine or a specialty. The boards do not purport in any way to interfere with or limit the professional activities of any licensed physician, nor do they desire to interfere with any practitioners of medicine in any of their regular or legitimate duties.

Two boards certify candidates in subspecialties. The American Board of Internal Medicine certifies in allergy, cardiovascular disease, gastroenterology, and pulmonary diseases. The American Board of Pediatrics certifies in allergy. Certification in the primary field is a requirement for certification in the subspecialties. The Board of Thoracic Surgery, which is organized as an affiliate board of the American Board of Surgery, requires certification in surgery as a prerequisite to certification in thoracic surgery.

Certificates in special divisions of their specialty are conferred by six boards. The American Board of Obstetrics and Gynecology will issue certificates in obstetrics or gynecology only. The American Board of Otolaryngology grants a limited certificate in endoscopy. The American Board of Pathology issues certificates in pathological anatomy, clinical pathology, a combination of these two fields, pathological anatomy and clinical microbiology, clinical microbiology and clinical chemistry, clinical bacteriology, neuropathology, clinical microbiology, hematology, and clinical chemistry. The American Board of Preventive Medicine issues certificates in public health, aviation medicine, and occupational medicine. The American Board of Psychiatry and Neurology issues separate certificates in psychiatry and in neurology or a combined certificate for those qualified in both fields. This board also issues supplementary certificates in psychiatry and in neurology. The American Board of Radiology issues certificates in radiology, roentgenology, therapeutic radiology, diagnostic roentgenology, therapeutic roentgenology, radium therapy, radiologic physics, x-ray and radium physics, and medical nuclear physics.

The majority of the American specialty boards have published booklets containing a list of their officers together with statements regarding organization, purposes, and qualifications that determine eligibility for certification. In this issue of *THE JOURNAL*, there are published, with the consent of each board concerned, the requirements for certification in specialties. This information is published for the convenience of those physicians who are planning to seek board certification. Any specific inquiry concerning certification by a specialty board should be addressed to the board secretary, whose name and address will be found in this issue of *THE JOURNAL*.

TABLE 1.—Approved Examining Boards in Medical Specialties

Name of Board	Year of Activation	Total Certificates Awarded to June 30, 1958
American Board of Anesthesiology	1937	1,829
American Board of Dermatology	1932	1,879
American Board of Internal Medicine	1936	11,865

* Independent board established in 1949.

Table 1 contains a list of the approved specialty boards, the year of activation, and the total number of candidates certified through June 30, 1958. Data are also presented regarding the number of physicians certified in the subspecialties and those granted special certification by the boards in obstetrics and gynecology, otolaryngology, pathology, preventive medicine, psychiatry and neurology, and radiology.

A total of 69,151 physicians were reported certified by the 19 specialty boards on July 1, 1957. From this date through June 30, 1958, 3,954 physicians were certified, bringing the total to 73,105 certifications on June 30, 1958. Sixty-nine physicians were certified in the subspecialties, bringing that total to 1,578 on the same date.

Table 2 indicates the total number of physicians certified each year for the past 16 years by all specialty boards. The total number certified on June 30, 1958, was 73,105.

TABLE 2.—Annual Specialty Board Specification, 1942-1958

Year (Ended March)	No. of Boards in Existence	No. Certified	Cumulative Totals
1942	15	1,756	19,694
1943	15	2,172	21,866
1944	15	1,578	23,444
1945	15	1,308	24,752
1946	15	1,320	26,072
1947	15	2,424	28,496
1948	16	3,002	31,498
1949 (June 30)	19*	4,479	35,977
1950 (June 30)	19	3,827	39,804
1951 (June 30)	19	4,552	44,356
1952 (June 30)	19	4,118	48,474
1953 (June 30)	19	4,022	52,496
1954 (June 30)	19	4,133	56,619
1955 (June 30)	19	3,843	60,462
1956 (June 30)	19	3,083	63,545
1957 (June 30)	19	5,424	69,151
1958 (June 30)	19	3,954	73,105

* One board, the American Board of Proctology, did not certify any candidates during this period.

The eighth edition of the "Directory of Medical Specialists," compiled by the Advisory Board for Medical Specialties and published in 1957 by the A. N. Marquis Company, Chicago, contains biographical information on the educational background of each living specialist, including those retired from practice, certified by an American board.

AMERICAN BOARD OF ANESTHESIOLOGY

SCOTT M. SMITH, President
Salt Lake City
FREDERICK P. HAUGEN, Vice-president
Portland, Oregon
DONALD L. BURDICK, New York
STUART C. CULLEN, Iowa City
ROBERT D. DRIPPS, Philadelphia
ALBERT FAULCONER, Rochester, Minn.
FORREST E. LEFFINGWELL, Pasadena, Calif.
E. M. PAPPER, New York
MILTON C. PETERSON, Kansas City, Mo.
HARVEY C. SLOCUM, Washington, D. C.
CURTISS B. HICKCOX, Secretary-Treasurer, Hartford, Conn.

REQUIREMENTS

Each applicant, before he shall become eligible for certification as a Diplomate in Anesthesiology, must satisfy the following requirements.

1. Have been graduated from a medical school approved by the Council on Medical Education and Hospitals of the American Medical Association or have been screened by organizations acceptable to the Board.

2. Establish in a manner satisfactory to the Board, that (a) he is a physician duly licensed by law to practice medicine, (b) he has completed a satisfactory internship, (c) he is of high ethical and professional standing, and (d) he has received adequate special training in Anesthesiology.

3. Submit proof to the Board that he has limited his practice to Anesthesiology as a specialty for five calendar years, of which at least two have been training approved by the Board; or submit proof to the Board that he has limited his practice for four calendar years, of which at least three have been training acceptable to the Board.

4. Prove to the satisfaction of the Board by such examinations and investigations as the Board may prescribe that he is qualified to practice Anesthesiology.

5. Personally prepare such case history abstracts of personally conducted procedures pertaining to Anesthesiology as the Board may specify.

Each applicant shall be classified for the purpose of examination and shall be examined in such a manner and under such rules as the Board may prescribe. The Board, acting as a committee of the whole, reserves the right to reject an applicant for any reason deemed advisable and without stating the same, and the action of the Board shall be final.

EXAMINATIONS

1. Written Examination: Eligible applicants may take this examination upon completion of two years of clinical training in a program approved by the Board. Written examinations are held annually in approximately 16 locations throughout the United States on the second Friday in July. Written examinations cover the basic and applied aspects of anatomy, chemistry and physics, pharmacology, pathology, and physiology. A passing grade, as determined by the Board, is required.

2. Survey Examinations: The Board may request one or more Diplomates to visit the applicant in his own locality to observe him in the practice of Anesthesiology. The Examiner may interview other individuals in the community to determine whether the candidate is of high ethical and professional standing. Such survey examinations as the Board may require are conducted after the written examination has been completed successfully, and prior to admission to the oral examination.

The expense of surveying and/or giving practical examinations outside of the United States will be borne by the candidate. The approximate amount of such funds to be paid by the candidate will be determined by the Secretary and must be paid in United States currency to the American Board of Anesthesiology in advance.

3. Oral Examinations: After limitation of practice to Anesthesiology as specified (Requirements Paragraph A /3/) the candidate's qualifications are reviewed, and he may be declared eligible to appear for the oral examination. However, at least six months must elapse between the written and oral examination. Examinations are conducted semi-annually, in April and October. Examiners consist of Directors of the Board, and Diplomates who assist as associate examiners. Oral examinations cover all phases of Anesthesiology, including the basic sciences and clinical applications.

4. Practical Examination: Applicants are requested to submit to the Board annual reports of their anesthesia experience on forms provided by the Board. These reports covering the minimum number of years of clinical training and practice as prescribed (Requirements Paragraph A /3/) must be filed with the Board in July of each year.

Applicants are entitled to three opportunities at yearly intervals to take the written examination. This three-year period begins on the date an applicant is first declared eligible for the written examination.

Oral examinations are given at six-month intervals. An applicant is entitled to one oral examination each year for a three year period.

In the event that a candidate fails an oral examination, at least 12 months must elapse before he may reappear for oral examination. The three-year period begins on the date an applicant is first declared eligible for the oral examination.

Failure to take an examination constitutes an opportunity just as much as failure to pass an examination. Under extenuating circumstances a candidate may apply for an extension of the three-year period by writing to the Secretary's office prior to the expiration of the three-year period. Under similar circumstances the Board, entirely at its discretion, may excuse a candidate from any scheduled examination without penalty, provided the request for such absence is filed prior to time of the examination.

A fee of \$50 will be charged for each repeat in the written and oral examination. The Board may, however, at its discretion deny a candidate the privilege of reexamination.

If an applicant fails to pass either the written or oral examination within the allowed period, having taken one or more written or oral examination, his application will be declared void and reapplication will not be allowed.

The Board reserves the right to limit the number of candidates to be admitted to any examination.

FEE

The fee shall be one hundred fifty dollars (\$150.00). At least fifty dollars (\$50.00) shall be paid upon filing the application, of which sum thirty-five dollars (\$35.00) shall be returned if the candidate is not accepted for examination. The remainder (\$100.00) shall be paid before taking the examination.

The Board is a nonprofit organization. The fees for examination and certification have been computed on a basis of cost of maintaining an administrative office and conducting examinations. The Board reserves the right to change the fee when necessary.

AMERICAN BOARD OF DERMATOLOGY

J. LAMAR CALLAWAY, President
Durham, N. C.

FRANCIS W. LYNCH, Vice-president
St. Paul, Minn.

LOUIS A. BRUNSTING, Rochester, Minn.

MARCUS R. CARO, Chicago

JOHN H. LAMB, Oklahoma City

CLINTON W. LANE, St. Louis

J. WALTER WILSON, Los Angeles

BEATRICE MAHER KESTEN, Secretary

WALTER C. LOBITZ JR., Assistant Secretary

Office of the Board: One Haven Ave., New York 32

GENERAL REQUIREMENTS

Preliminary registration forms are acceptable after the applicant has met the following requirements:

1. High ethical and professional standing.
2. Graduation from a medical school approved, at the time of the candidate's graduation, by the Council on Medical Education and Hospitals of the American Medical Association. (Graduates of schools not on the approved list may be eligible provided they pass Part I and Part II of the examinations of the National Board of Medical Examiners.
3. Satisfactory completion of an approved internship.
4. A state license to practice medicine in the United States or Canada issued following examination, or by endorsement of the certificate of the National Board of Medical Examiners, or regular status in the Armed Forces of the United States or Canada.
5. Citizenship in the United States or citizenship by birth in Canada.

SPECIAL REQUIREMENTS

The following minimum requirements have been established for admission to examination:

Formal training in dermatology and related subjects, of not less than three years. This training may be obtained as a resident, fellow, or graduate student in the institutions recognized by the Council on Medical Education and Hospitals of the American Medical Association and approved by the joint Residency Review Committee for Dermatology. One month in each year may be taken as a vacation. Vacations

may not be postponed from one year to another. Candidates will be eligible for the written examination when a minimum of three full years have elapsed since the beginning of training.

The formal training shall include: At least one year full-time in an institution approved for three-year training in dermatology; graduate training in the basic medical sciences; and carefully supervised clinical and laboratory work.

METHODS OF TRAINING

The preferred method of training is a three-year well-integrated and continuing program in an institution approved for the full training period. At least one year of full-time training in an institution approved for three years is required.

However, apart from the required full-time year in such an institution, the additional training requirements may be fulfilled by training in institutions approved for one year or two years or in part as a preceptee.

Training must be completed within five years except where military service or other compelling circumstances shall intervene.

Suggestions for the study of Dermatology are given in the Syllabus of Graduate Training.

PRECEPTESHIP TRAINING

Candidates may take one year of their training under the direction of a preceptor approved by the Board. Not more than half of each training day may be spent in the office of the preceptor; during the other half-day training must be undertaken in an approved institution. Although preceptorships may be taken during any one of the years of training, it is recommended that the preceptee have at least one year of dermatologic training previous to a preceptorship. After preceptees have become diplomates, they will be asked to fill out a Precepteeship Evaluation Form.

CREDIT FOR MILITARY SERVICE

Candidates who have served in the Armed Forces of the United States or Canada as physicians may submit credentials for possible credit toward training or experience. The Supplementary Application form for Military Training should be submitted with the Preliminary Registration form or at the termination of military services.

RESPONSIBILITY

It is the candidate's responsibility to make early contact with the Board, to ascertain and observe its regulations, and to file the preliminary registration and the application for certification forms. Candidates must meet all requirements before applying for certification.

Directors of training are responsible for submitting an Annual Graduate Training form on each candidate.

Approved preceptors, in conjunction with the director of training of the institution in which the candidate spends half his training time, are responsible for submitting an Annual Graduate Training form on each preceptee.

PRELIMINARY REGISTRATION

Each candidate must file a Preliminary Registration form with the Board at the beginning of training, whether or not plans are complete at the time. This establishes his identity and status as a candidate, and begins his permanent file. It enables the Board to detect any deficiencies in the plan of training. No fee is involved at this time.

ESTIMATES OF STATUS

Decisions as to the status of candidates who ask for an estimate of the further training needed can be made only by the Committee on Requirements upon submission of an Estimate of Status Form. The \$25 registration fee, which will be credited toward the application for certification, must accompany this form. The Board acts as a body and through duly constituted committees. Individual members only carry out the rules and regulations of the Board.

APPLICATION FOR CERTIFICATION

Application for certification forms may be filed before the end of the formal training period and must be made before the closing date regularly published in the Examinations and Licensure column of THE JOURNAL of the American Medical Association. Dates of examinations are also published here. Applications should be filed during the last year of training in order to obtain full advantage of the loan sets of histopathology slides available from the Armed Forces Institute of Pathology. Application will be considered with the accompanying registration fee of \$25, which will not be refunded. When all supporting documents have been received the application is submitted to the Committee on Requirements, which appraises the qualifications of the candidate and decides as to his eligibility for examination. An examination fee of \$75 is payable when the candidate is notified that his application is acceptable to the Board.

The total fee of \$100 has been carefully computed and is used entirely for administrative purposes. Members of the Board receive no compensation except for actual expenses connected with the examinations.

EXAMINATIONS

Examinations are designed to ascertain the breadth of the candidate's knowledge in the basic as well as the clinical aspects of dermatology and to test his familiarity with the literature and to gauge his general qualifications as a specialist in this branch of medicine.

All applicants for certification must now pass a comprehensive written examination before they are eligible for the oral test. The written examination is held simultaneously in major cities. Applicants are then required to pass the oral clinical and laboratory examination which is conducted in a clinic. Cases will be seen and discussed with each candidate, and the examiners will seek to ascertain his knowledge of dermatology as well as of various related subjects.

Candidates whose applications have been accepted may take the next examination after the completion of training. Except in special circumstances, an applicant shall take the examination within a year following the filing of application. A candidate once accepted for an examination will henceforth remain eligible for only two succeeding examinations, unless some compelling circumstance, such as military service, shall intervene.

Candidates who have signified their intention of taking the examination and who fail to appear, or who cancel their request after the final notice has gone out, shall forfeit the examination fee.

The Board's records are confidential throughout. Examination marks will not be divulged. The findings of the Board are subject to its discretion and are final. Applications are accepted on this understanding.

PRECEPTORS AND PRECEPTEE TRAINING

Preceptors are diplomates of the Board of at least five years standing in active practice, recognized teachers of professorial rank, on the active staff of an institution approved for three years of graduate training in dermatology.

Precepteeships are now granted for only one year of graduate training. The preceptee must not spend more than one-half of his time in the preceptor's office. The remainder must be spent under supervision in an institution approved for three years of graduate training in dermatology. His work program should be based on not less than a 40-hour week.

A Preceptee Work Plan is filed with the Secretary of the Board previous to acceptance of each preceptee. Following the preceptorship, the preceptor, in conjunction with the director of training of the institution in which the candidate spends half his training time, submits an Annual Graduate Training form on each preceptee.

Each dermatologist who wishes to become a preceptor must file an Application for Preceptorship form with the Board. (The Committee on Education passes on these applications.) Detailed qualifications, rules, and regulations as well as duties and rights of preceptors and preceptees will be sent to dermatologists on request.

AMERICAN BOARD OF INTERNAL MEDICINE

THOMAS M. DURANT, Chairman, Philadelphia
 HOWARD P. LEWIS, Vice-Chairman, Portland

 C. WILMER WIRTS, Philadelphia
 ERIC E. WOLLAEGER, Rochester, Minn.

PULMONARY DISEASES

THEODORE L. BADGER, Boston, Mass.
 ALVIS E. GREER, Houston, Texas
 CARL MUSCHENHEIM, New York
 ARTHUR M. OLSEN, Rochester, Minn.
 JULIUS L. WILSON, Philadelphia

GENERAL QUALIFICATIONS

1. All candidates must be citizens of the United States or Canada.
2. All candidates must be licensed to practice medicine in a state, territory, or possession of the United States or Canada.
3. All candidates must present evidence of satisfactory moral and ethical standing in the medical profession.

PROFESSIONAL QUALIFICATIONS

1. Graduation from a medical school approved by the Council on Medical Education and Hospitals of the American Medical Association at the date of graduation.
2. Satisfactory completion of an approved internship of not less than 12 months.*
3. Residency or fellowship approved by the Council on Medical Education and Hospitals of the American Medical Association in internal medicine according to the following plan (Plan A) or one of the alternate plans described under paragraph 4.

*During the period in which the 9-9-9 program was in effect an approved internship of nine months will satisfy the requirement of twelve months. A residency of nine months is considered as nine months only.

(Plan A) A residency or fellowship in internal medicine for a period of not less than three years in a hospital or other institution approved by the Council on Medical Education and Hospitals of the American Medical Association for residency or fellowship in internal medicine. In such instances in which a resident's nominal status differs from that of the other hospital residents, he must furnish the Board with certification by the Chief of the Medical Service and the Medical Director of the Hospital that he actually performed the full duties of a resident as a bonafide member of the residency program. In addition, two years of adequate clinical experience in the practice of internal medicine following graduate training will be required. The Board will accept the following equivalents as satisfying one year only, of the three years of residency or fellowship to which this paragraph refers. (Two years must be in the field of general internal medicine.)

(a) If 12 months of a two-year approved internship in a hospital approved for residency training in internal medicine is limited to the medical service and the medical specialties, credit will be granted for a first year of assistant residency. The remaining two years of residency training must be in the general field of internal medicine. Certification by the Chief of the Medical Service as to compliance with this requirement must accompany application.

(b) One year of approved residency in one of the medical specialties: Allergy, Cardiovascular Disease, Gastro-Enterology, Hematology, Pathology, Pulmonary Diseases, Neurology, Pediatrics, Psychiatry, Dermatology, and Syphilology, provided the candidate completes in addition, two full years of approved residency in the general field of internal medicine.

(c) One year as a medical graduate student or as a medical graduate instructor in an approved medical school on a full-time basis in Bacteriology, Biochemistry, Pathology, Pharmacology, Physiology, or Internal Medicine.

(d) An advanced degree in the Medical Sciences, provided the work has been done and the degree obtained after graduation from medical school.

NOTE: Graduate training credit for the time involved will be allowed candidates who take and satisfactorily complete post-graduate courses in internal medicine or the basic medical sciences provided by accredited medical schools on a full-time basis. This ruling shall not apply to courses of less than three months or more than twelve months duration. A certification of creditable performance, based in part, at least, on a formal examination upon completion of the course, will be required.

NOTE: Fellowship or Research assignments not approved by the Residency Review Committee in Internal Medicine will require certification by the Chief of Service that such assignments were equivalent in graduate training opportunities and patient responsibilities to those of approved residencies in Internal Medicine or the sub-specialties recognized by this Board. This certification must be presented with application.

4. Alternate Training Plans: The Board firmly believes that the plan of intensive training prescribed above offers the best opportunity for a young physician to prepare himself to meet his responsibilities as a specialist in internal medicine. It is recognized, however, that capable individuals may accomplish the same result in a longer period of time during which the training is less intensive. The Board realizes that a number of medical graduates cannot follow the shorter and more desirable plan either because suitable residencies are not available or in some instances because of personal and economic reasons. Accordingly the Board has modified its previous regulations governing eligibility for admission to examination. In doing so the Board has not modified its standards of examination. It has liberalized its eligibility requirements for admission to examination by accepting half-time formal training, and the practice of internal medicine under circumstances favorable as to professional

and hospital contacts, in lieu of part of the full-time requirements. It is hoped that by this means exceptional individuals may acquire a knowledge of medicine and experience in its application sufficient to qualify for examination.

The program previously described (Plan A), which consists of three years of formal training in an approved residency or its equivalent, following internship, and followed by two additional years in the practice of internal medicine, is recommended by the Board. Variations in this program are now subject to the following regulations:

(a) In all instances, one year of approved internship and one year of approved residency will be required, except as indicated under Plan G. The graduate training credit of one year heretofore granted as a result of active duty as a commissioned officer in the Armed Forces during the period beginning December 7, 1941, and ending January 1, 1947, and during the Korean emergency beginning June 1, 1950, and ending July 1, 1954, may not be applied in satisfaction of the one year of approved residency referred to in Plans D, E, F, unless the candidate's assignment is considered by the Board to have been equivalent to an approved residency.

(b) Following one year of internship and two years of approved residency, the remaining requirements may be satisfied by:

(Plan B) That is by two years of half-time formal training followed by two years of practice limited to internal medicine or by

(Plan C) That is, by five years of practice limited to internal medicine.

(c) Following one year of internship and one year of approved residency, the remaining requirements may be satisfied by:

(Plan D)* That is, by four years of half-time formal training followed by two years of practice limited to internal medicine or by

(Plan E)* That is, by two years of half-time formal training followed by five years of practice limited to internal medicine, or by

(Plan F) That is, by eight years of practice limited to internal medicine.

(d) (Plan G) Physicians who have practiced internal medicine for 12 years following an approved internship may qualify for the examinations without further training.

(e) (Plan H) In order to better the opportunity for adequate graduate education in terms of the requirements of this Board, a special plan (Plan H) has been designed. This plan is exclusive. It is reserved for Chairmen of Departments of Medicine in approved medical schools in the United States and Canada, who may wish to recommend for admission to examination certain men who have planned a career in academic medicine, but whose training has not satisfied the requirements of any of the other "PLANS" authorized by the Board. Candidates may not elect Plan H at the time they make application. Specific recommendations that a candidate be qualified under this plan must be made by a Chairman of a Department of Medicine in a Class A Medical School in the United States or Canada. This recommendation must assure that the candidate has been under the jurisdiction and guidance of him or other persons whom he has selected or recommended during a five-year period of training after internship; that this training has been shaped with the idea that the candidate has been preparing for an academic career; and that during the training period the candidate has had adequate direct responsibility for patient care in the broad field of Internal Medicine. This Plan is intended for the unusual candidate. Each application will be individually considered by the Executive Committee of the Board.

It will be the responsibility of Heads of Departments of Medicine to affirm to the American Board of Internal Medicine that the candidate is qualified for admission to examination after a minimum of five years of training. It may well be that the Head of the Department will require additional

years of training beyond the minimum before stating the qualifications of the candidate to the Board. A candidate thus recommended under the foregoing provisions will be examined by the Board in the broad field of internal medicine.

If, during the period of training under Plan H, the candidate decides to qualify under one of the other plans of the Board (A to G) credit will be granted on the basis of the requirements of Plans A to G.

Half-time formal training under expanded plans B, D, and E is defined as follows:

1. Half-time* as an instructor in clinical medicine in a recognized medical school in the United States or Canada.

2. Half-time* in a research fellowship sponsored by a recognized medical school in the United States or Canada.

3. Half-time* as a graduate student in an approved medical school in the United States or Canada.

5. Practice Requirements: A period of not less than two years (to be completed by the time of the first written examination) of adequate clinical experience in the practice of internal medicine. This requirement may be satisfied by independent practice or in association with a recognized internist following completion of formal training. If teaching or research assignments are broad enough to merit practice credit, please ask Chief of Service or Chairman of the Department of Medicine to certify that assignments are equivalent to the practice of medicine as it is commonly known. Adequate experience in the care of clinical patients would include full responsibility for inpatients as well as outpatients. The certification referred to should accompany application.

6. Graduates of Foreign Medical Schools: All candidates who are graduates of foreign medical schools must meet the following requirements as a minimum:

(a) The physician must be a citizen of the United States.

(b) The physician must furnish proof in the form and to the extent deemed adequate by the Board that he (or she) has graduated from a medical school after completing a four year full-time course in medicine.

(c) The physician must have a license to practice in one or more states of the United States and have been in active practice confined to Internal Medicine within the state of legal residence for at least two years.

(d) Graduates of foreign medical schools prior to 1930 may qualify under the alternate plans of the Board the same as graduates of approved medical schools in the United States.

(e) Graduates of foreign medical schools in 1930 and thereafter must, in addition to all other requirements, satisfy the requirements of one year of approved internship and three years of approved residency or fellowship in the United States, followed by at least two years of practice limited to the field of Internal Medicine in the United States. If, however, their school of graduation is "recognized" by the Council on Medical Education and Hospitals of the American Medical Association, graduates of Foreign Schools may qualify under the various plans of the Board the same as graduates of approved Medical Schools in the United States.

7. Candidates Graduating Prior to 1937: Candidates graduating from approved medical schools in the United States or Canada prior to 1937 may qualify for admission to examination provided their practice has been limited to internal medicine for at least two years prior to application and provided they are identified as internists by their colleagues in their community.

8. Preceptor Training: Preceptor type training is not recognized in satisfaction of any part of the three-year requirement of formal graduate training.

9. Credit for Service in the Medical Corps of the Armed Forces of the United States and Canada.

*Half-time formal training is regarded as four hours per day for six days per week. It is required that half-time formal training be verified by the head of the department. Verification must accompany application.

(a) Active duty as a commissioned officer in the Medical Corps prior to January 1, 1947, may be applied as one year of residency credit or one year of practice credit, regardless of assignment.

(b) Active duty as a commissioned officer in the Medical Corps for period June 1, 1950, to July 1, 1954, may be applied as one year of residency credit or one year of practice credit regardless of assignment.

(c) Active duty as a commissioned officer in the Medical Corps after July 1, 1954, may be applied as practice credit provided the candidate had previously satisfied the requirements of graduate training. Certification of Chiefs of Service that assignments were in the field of Internal Medicine on a full-time basis in the care of clinical patients largely on one's own responsibility is required.

(d) Residency credit automatically granted for active service in the Medical Corps of the Armed Forces was discontinued as of July 1, 1954.

10. Graduates of The Chicago Medical School, prior to approval by the Council on Medical Education and Hospitals of the American Medical Association, and graduates of the Middlesex School of Medicine, who received their degree in medicine prior to January 1, 1951, and who have fulfilled all of the requirements set forth in Section 2 (Requirements for admission to Examination and Certification), and an approved residency or fellowship of three years duration (Plan A) and followed by two years of practice in Internal Medicine may apply, and at the discretion of the Executive Committee or of the Board may be admitted to examination.

PRINCIPLES OF TRAINING

The American Board of Internal Medicine is interested in the fact that the candidate has embarked on a career of study voluntarily and has thereby expressed the desire to excel and to participate personally in the world's progress in Medicine.

Preparation must be based on years of continuous thoughtful study. Therefore, in suggesting a program for those who wish advice, the Board hopes to assist the candidates to avoid inferior and superficial programs which may lead to failure and disappointment in later years.

The Board believes that all internists should have a sound fundamental knowledge of Anatomy, Bacteriology, Biochemistry, Pathology, Pharmacology, and Physiology. Such knowledge is essential to the continued progress of any internist. The Board anticipates that adequate training will be obtained in the basic sciences as applied to internal medicine during a formal three-year residency program.

The Board wishes to emphasize that time and training are but a means to the end of acquiring a broad knowledge of internal medicine which the candidate must demonstrate to the Board in order to justify it in certifying that he is competent to practice internal medicine as a specialty. The responsibility of acquiring the knowledge rests with the candidate. The responsibility of maintaining the standards of knowledge required for certification rests with the Board.

APPLICATION

Candidates for examination must make their application on a prescribed form which may be obtained from the office of the Executive-Secretary-Treasurer.

The application must contain a record of the candidate's premedical and medical training as well as of internships, residencies, graduate study, hospital or dispensary staff appointments, teaching positions, service in the armed forces, membership in medical societies, medical papers published, and the names of four well-known internists to whom the Board may write for professional and character reference.

The application must be accompanied by one recent, signed photograph of the candidate mounted on the application, and the registration and examination fee of forty dollars (\$40.00) to cover the written examination, of which

twenty-five dollars (\$25.00) will be refunded if the application is disapproved. Upon application for admission to the oral examination, an additional fee of fifty dollars (\$50.00) will be required. Upon notification of certification by the Board, a further fee of ten dollars (\$10.00) to cover cost of certification will be required.

Applications must be filed by May 1 of the year concerned and all requirements must be satisfied by October 1 of the year concerned.

The requirements of graduate training followed by two years of practice in the field of internal medicine must be satisfied before a candidate is eligible for admission to examination.

If three or more years elapse before a candidate completes his certification, the Board will require the candidate to file a new application.

METHOD OF EXAMINATION—WRITTEN AND ORAL

1. The examinations for certification by the Board comprise two parts: Part I is written; Part II is clinical and is an oral examination. The written examination is held simultaneously in different sections of the United States, Canada, and outside continental limits of the United States wherever eligible candidates are located. Only one written examination will be given each year. This examination will be held on the third Monday in October. This examination is divided into a morning and afternoon period for each of which three hours are allowed. The questions are of the multiple-choice type, framed in such manner as the Board elects, and designed to test the candidate's basic clinical acumen and his knowledge of applied physiology, anatomy, physiological chemistry, pathology, bacteriology, and pharmacology as related to internal medicine.

2. Candidates must pass the written examination before admission to the oral examination will be authorized. Oral examinations are held near the time and place of the annual meetings of the American Medical Association and the American College of Physicians and at such other times and places as the Board may designate. Announcements of all oral examinations will appear in the *Annals of Internal Medicine* and THE JOURNAL of the American Medical Association. Applications cannot be accepted until the schedule is announced in the publications referred to and cannot be accepted after closing date is announced.

3. The oral examination will be conducted under the direct supervision of the Board. It will be given by members of the Board of Internal Medicine with the assistance of such Guest Examiners as may be selected. Oral examinations are conducted at the bedside of each of two patients previously assigned to each candidate. Forty-five minutes will be allowed for the examination of each of the patients before the candidate is examined orally. Candidates will be expected to present in a concise, orderly fashion pertinent facts in history and diagnosis. Demonstration of important physical findings will be requested by the examiner. During the oral examination, questions will be asked concerning diagnostic and therapeutic procedures related to the problems under discussion and to any other aspects of Internal Medicine. Conciseness and clarity of statements as well as evidence of clinical maturity will be searched for, in addition to factual knowledge. Furthermore, the candidate should be prepared to demonstrate his ability to interpret objective demonstrations of roentgenologic, pathologic, hematologic, electrocardiographic and other abnormalities.

Revised Requirements Governing Readmission to the Written and Oral Examinations

To: All Candidates eligible for readmission to the Written and Oral Examinations of this Board.

I. Written Examination

1. The interval between written examinations will be not less than one year.

2. The number of written examinations for which a candidate may apply is not limited.

3. A fee of twenty-five dollars (\$25.00) is required for each written reexamination. This fee is due upon application for reexamination.

II. Oral Examination

1. The interval between oral examinations will be not less than one year.

2. Candidates failing the oral examination three times, must reapply for admission to the written examination. After passing the written examination again, candidates become subject to the same regulations and priorities in respect to the oral examination as apply to candidates who pass the written examination for the first time.

3. A fee of fifty dollars (\$50.00) is required for each oral reexamination. This fee is due upon application for reexamination.

The effective date of the changes referred to governing readmission to the written and oral examinations was February 1, 1958, and will apply to examinations taken after February 1, 1958.

AMERICAN BOARD OF NEUROLOGICAL SURGERY

EDGAR A. FINCHER, Chairman, Atlanta, Ga.
 E. JEFFERSON BROWDER, Vice-chairman, Brooklyn, N. Y.
 GEORGE S. BAKER, Rochester, Minn.
 EDWIN B. BOLDREY, San Francisco, Calif.
 DEAN H. ECHOLS, New Orleans
 JAMES GARDNER, Cleveland, Ohio
 EDGAR A. KAHN, Ann Arbor, Mich.
 DONALD D. MATSON, Boston, Mass.
 FRANK MAYFIELD, Cincinnati, Ohio
 WILLIAM T. PEYTON, Minneapolis
 JOHN RAAF, Portland, Ore.
 LEONARD T. FURLOW, Secretary-Treasurer, 600 S. Kingshighway, St. Louis 10

GENERAL QUALIFICATIONS

1. Moral and ethical standing in the profession satisfactory to the board of directors.

2. It shall be discretionary with the board to accept for examination candidates who have been in neurosurgical practice more than six years but whose formal training fails to meet full requirements.

3. Properly qualified candidates who are permanent residents in and citizens of other countries and are legally qualified to practice medicine there and who have received their training in neurological surgery in the United States of America or Canada may apply for certification by the American Board of Neurological Surgery.

4. A special certificate may be issued to foreign (not United States of America or Canadian citizens) candidates who have received their training in neurological surgery in the United States of America or Canada and who are returning to their own country at the end of their training period, upon passing successfully the regular examinations of the board, without completion of the requirement of two years in the practice of neurological surgery. This special certificate shall be appropriately identified to distinguish it from the regular certificate of this board.

PRELIMINARY PROFESSIONAL STANDING

1. Graduation from a medical school that is acceptable to the American Board of Neurological Surgery.

2. (a) Completion of a surgical internship of not less than one year in a hospital acceptable to the Board, or its equivalent in the opinion of the Board, plus a period of graduate study of not less than four years beyond the year of general surgical training in an approved hospital, or in a recognized graduate school of medicine, acceptable to the American Board of Neurological Surgery. Of this training period, at

least 30 months must be devoted to clinical neurological surgery. The training in clinical neurological surgery must be progressive and not obtained during repeated short periods in a number of institutions. It is necessary that at least two years of this training be had in one institution, and the Board will not ordinarily approve periods of training in clinical neurological surgery of less than one year.

OR

2. (b) Completion of a rotating internship of not less than one year in a hospital acceptable to the Board or its equivalent in the opinion of the Board, plus a period of graduate study of not less than four years beyond the year of rotating internship in an approved hospital, or in an accredited school of medicine acceptable to the American Board of Neurological Surgery. Of this training a period of at least six months must be in an approved clinical program in general surgery, and at least thirty months must be devoted to clinical neurological surgery. The training in clinical neurological surgery must be progressive and not obtained during repeated short periods in a number of institutions. It is necessary that at least two years of this training be had in one institution, and the Board will not ordinarily approve periods of training in clinical neurological surgery of less than one year.

Furthermore, the candidate must prepare himself to pass a Board examination in general surgery, organic neurology, neuropathology, neuroanatomy, neurophysiology, and neuro-radiology.

The Board does not accept training by preceptorship.

An additional period of not less than two years of satisfactory independent practice of neurological surgery.

The above represents only the minimum requirements of eligibility for examination for certification by the Board.

APPLICATIONS

An application on the official application blank in order to be considered at any meeting must be in the hands of the secretary-treasurer of the Board not less than six months before the date of such meeting.

PAYMENT OF FEES

The fee for certification shall be one hundred fifty dollars (\$150.00). The candidate for examination, on filing his application, shall accompany it with an application fee of twenty-five dollars (\$25.00). The application fee will not be returned even though the application for examination is denied. When notified by the Secretary-Treasurer that he is eligible for examination, he shall send the examination fee of one hundred twenty-five dollars (\$125.00) to the Secretary-Treasurer at least two weeks before the date of the examination.

AMERICAN BOARD OF OBSTETRICS AND GYNECOLOGY

F. BAYARD CARTER, President, Durham, N. C.
 ROBERT A. KIMBROUGH Jr., Vice-president, Philadelphia
 HERBERT E. SCHMITZ, Vice-president, Chicago
 LAWRENCE M. RANDALL, Assistant Secretary, Rochester, Minn.
 WALTER T. DANNREUTHER, New York City
 DANIEL G. MORTON, Los Angeles
 JOHN L. PARKS, Washington, D. C.
 CONRAD C. COLLINS, New Orleans
 R. GORDON DOUGLAS, New York City
 CARL P. HUBER, Indianapolis
 CURTIS J. LUND, Rochester, N. Y.
 REED B. DAWSON, Esq., Counsel, New York City
 ROBERT L. FAULKNER, Secretary-Treasurer, 2105 Adelbert Rd., Cleveland, Ohio

REQUIREMENTS

Each applicant, before he may become eligible to apply for examination, must establish the following facts:

1. The possession of the degree of Doctor of Medicine from an institution of learning approved by the Council on Medical Education and Hospitals of the American Medical Association.

2. That he is a physician of high ethical and professional standing duly licensed to practice medicine in the United States or Canada and is a member of a County or District Medical Society.

3. The completion of at least one year of intern service in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association. The Board accepts the fifth or "intern" medical school year required by some schools in lieu of the usual fifth or intern year of clinical training following graduation.

4. The completion of seven years of training and practice after the first intern year to include at least three years of Progressive Residency Training in clinical obstetrics-gynecology in approved institutions. Approved Preceptorship training may be substituted in part for Residency training, as explained on pages 20 and 21.

5. Following completion of acceptable training, two years of post-training practice, limited to the specialty, are required before application for examination can be made. Post-training practice may include practice within the specialty as an assistant or associate or independent practice. Periods of Residency in obstetrics-gynecology in excess of the required three years will not be accepted as a substitute for any part of the two required years of post-training practice except in the cases of men advancing from the Residency Training into and planning to remain in full-time faculty positions in Medical Schools and their affiliated hospitals.

6. That he is limiting his practice to obstetrics and/or gynecology and intends to continue to do so, except for possible military duty.

7. The Board conformed with the general acceleration in programs in medical education in that it will accept a period of nine "accelerated" months as an academic year in satisfying our requirements for each of three years of residency training. Such allowances can be made only for services during the wartime period of the official "accelerated program" and are not made for services before 1943 or after the discontinuance of this acceleration in 1946.

8. Applicants who have been certified by one of the other American Specialty Examining Boards will not be eligible for certification by this Board until they have relinquished the certificate previously conferred, except upon special action to the contrary taken by the American Board of Obstetrics and Gynecology.

9. The Board has ruled that physicians who accept male patients in their private or other practice, for operative or other care, cannot be regarded as specialists in obstetrics and gynecology, except by special ruling when this is related to active military duty.

10. This Board deprecates engagement in fields of practice other than that in which candidates profess to be specialists. The sole exception to this provision is that it is permissible for candidates and diplomates of the American Board of Obstetrics and Gynecology to participate in Emergency Care.

11. This Board will not accept applicants for examination who are not full citizens of the United States or of Canada. Foreign born applicants must have been certified by either the National Board of Medical Examiners or licensed to practice medicine in the United States or Canada by a State or Provincial Board of Licensure. Notarized statements, not original citizenship papers, must be furnished when the application is filed attesting to the fact of full citizenship in the United States or Canada, if the applicant is foreign born.

Further, there will be required a probationary period of at least three (3) years from the date of licensure in the practice of medicine in these countries before such a candidate may be admitted to examination.

SPECIAL CREDITS AND RULINGS

1. Physicians otherwise qualified, who were graduated before January 1, 1939, and whose required training was in obstetrics or gynecology alone, and who have confined their practice to obstetrics or gynecology for at least five (5) years immediately prior to application may be accepted for examination as candidates for certification in either obstetrics or gynecology. In all other respects requirements for eligibility remain the same as for those physicians graduated since 1939. At least a fundamental knowledge of both obstetrics and gynecology is essential, regardless of whether a candidate's practice is limited to one or the other branch.

2. Basic science training should emphasize the relation of anatomy, pathology, physiology, biochemistry, and bacteriology to the application of surgical principles which are fundamental in all branches of surgery. More especially for this specialty there should be training in infertility, endocrinology, oncology, irradiation therapy, electrotherapy, psychosomatic medicine, and other nonoperative methods of diagnosis and treatment. In addition, the candidate must understand and be trained in the care of emergencies, shock, hemorrhage, blood replacement, electrolyte and fluid balance, protein and nitrogen balance, choice of anesthetics, chemotherapy, acidosis and alkalosis, narcotics and hypnotics, wound healing, etc.

3. After July 1, 1958, this Board will not allow credit within the three years required training period for separately organized basic science courses which remove the candidate from clinical training in obstetrics and/or gynecology.

4. Training in abdominal surgery, in addition to the required three (3) years of training in clinical obstetrics and gynecology, is desirable and may be included in the total minimal seven (7) years required after the intern year.

5. Applicants on service in obstetrics-gynecology under orders in hospitals of the Army, Navy, Air Force, and Public Health Service will receive residency training credit if such hospitals are officially approved for training in this specialty.

When the hospital is not approved, Preceptorship Training credit may be allowed if the service is supervised by a Diplomate of this Board or an otherwise qualified obstetrician and gynecologist. If such training credit is desired, candidates must comply with the regulation governing Preceptorships as published on pages 20 and 21 of this bulletin. In addition, the Medical Officers Professional Training Record should be completed and attested while in military service.

Credit toward the required two years of post-training practice, limited to this specialty, will not be allowed for service in the Armed Forces except in the case of regular medical officers who have completed the training requirements.

APPLICATION AND FEES

Application must be made on a special blank which will be furnished by the Secretary's Office and must be forwarded with the other required credentials and the application fee to the Secretary's Office not later than September 1 of each year. Commencing in 1959 this date will be advanced to August 1 of each year.

All candidates must comply with Board regulations in effect for one year in which the examination is taken, regardless of when the original application was filed.

Candidates applying for admission to the examinations for certification are required to submit with their application, an unbound typewritten list, on 8½-by-11-in. paper, of all patients admitted to the hospitals where they practice, for the year preceding their application or the year prior to

their request, for reopening of their application, with the age, parity, diagnosis, pathological diagnosis, nature of treatment, and end result.

The list should conform to page 23 of this Bulletin and be certified by the hospital librarian, administrator, or superintendent.

The application fee is \$35.00 and is not returnable.

The examination fee is \$100.00 and is payable when the candidate is notified of acceptance for examination. This fee is not returnable after the candidate has been officially accepted by the Credentials Committee and notified to report for examination.

If the candidate fails the Part II examination on his original application, he may exercise the privilege of one reexamination (see Examinations, Part II) but will be required to pay a fee of \$25.00 for such reexamination upon making request that his application be reopened for this purpose.

The fees have been carefully computed on a basis of cost of examinations and are used entirely for administrative expenses. Examiners and Associate Examiners serve as such without compensation other than actual expenses.

APPRAISAL OF INCOMPLETE TRAINING

Many prospective candidates write the Secretary's Office outlining in their letters their training qualifications and asking informally if they are eligible, if this training has been sufficient and, if not, what is still lacking. Any candidate should be able to make a fair estimate of his eligibility after studying this Bulletin.

However, if the candidate wishes an informal evaluation of qualifications, a form "Application for Appraisal of Incomplete Training" should be requested from the Secretary of the Board. The request should be accompanied by a check for \$15.00 to cover the clerical expense involved. Prospective candidates are reminded that this appraisal is not official and is subject to review and final decision by the Credentials Committee when they consider the application for admission to examination.

Appraisal of Incomplete Training forms should not be filed if Application for admission to examination has already been filed. This is unnecessary duplication.

Official interviews cannot be granted by the Secretary or other Directors of the Board unless requested by the Board.

Applicants declared ineligible for admission to examination may request reopening of their applications within two (2) years of the filing date without payment of an additional application fee. When a candidate requests that his application be reopened, he must supply the Board with information to justify such further consideration. A request for the reopening of an application declared ineligible by reason of insufficient training, nonlimitation of practice, or similar items may not be approved in less than two (2) years, although application may be made as specified above to avoid payment of an additional fee. This approval time may be reduced under exceptional circumstances. The request must have adequate supporting evidence of additional training and experience to warrant reconsideration. Supplemental Training blanks should be used for such reports, and these will be supplied upon request.

After two ineligibility or postponement rulings on any candidate's application, an entirely new application must be submitted (with or without fee, according to current requirements) in order to bring data down to date. The essential feature of this should be evidence of additional training and experience.

Applicants declared eligible but who fail to exercise the examination privilege within three (3) years of the date of filing the application are required to file a new and current application and to pay a new application fee. Candidates should offer as sponsors or references, two Diplomates of this Board with whom they are presently in contact rather than men under whom they served as residents only. It is required

that sponsors be from the candidate's community and currently acquainted with the candidate and his ability in his practice of the specialty.

When notice of acceptance for admission to examination has been received by the candidate it should be immediately acknowledged and the examination fee paid. Case reports must be forwarded to the Secretary within thirty (30) days.

EXAMINATIONS

Part I examinations are scheduled for January 16, 1959. Arrangements will be made for candidates to report in any convenient city where there may be a Diplomate of this Board to conduct or to supervise the written examination which will be sent out from the Board's Office under sealed cover.

Special arrangements will be made through senior officers for conducting the written portion of the Part I examination for men in military service. Such candidates are requested to keep the Secretary's Office informed at all times of changes in their mailing addresses.

All applicants accepted for examination will be required to obtain a passing grade in both the written examination and a review of case reports (Part I), before becoming eligible for the oral clinical and pathology examinations (Part II). The passing grade for the written examination and case reports is 75%. A candidate whose grade in either or both falls below 75% is conditioned. Reexamination for the removal of conditions in Part I may be taken after one year but within three years after the first failure, without payment of an additional fee.

Requests for reexamination in the written portion of Part I and requests for resubmission of case reports must be filed prior to September 1 of each year. Candidates who successfully complete the Part I examination proceed automatically to the Part II examination held later in the year.

Requests for reexamination in Part II must be made prior to September 1 of each year.

Candidates appearing for reexamination under a new application after two previous failures will not be required, if they have passed all or part of the Part I examinations on their first application, to repeat such examination items already successfully cleared.

Part I

Examination consists of:

1. A comprehensive written examination, conducted annually, including questions on both obstetrics and gynecology and related basic sciences. The written examination will be limited to a maximum period of three hours.

2. The evaluation of twenty (20) important obstetrical and gynecological case reports in condensed form. Five (5) of the twenty (20) cases may concern major illnesses not necessarily operative. These reports must include a variety of material rather than a number of reports of one type. Case reports from one's residency service shall not be more than five (5) in number.

CASE REPORTS

In the case of candidates applying for unilateral certification, case reports must pertain to the branch for which application is made.

Men holding full-time Medical School faculty appointments may submit the remainder of their case records from this full-time, nonprivate practice, but post-training service. (See Requirements.) The candidate should prepare and maintain in his possession a carbon copy of his case records in case of possible loss in shipping.

Evidence of adequate follow-up examination pertinent to each individual case must be submitted.

The candidate should submit separate verified index lists, in duplicate, for each individual hospital at which operations were performed. All of these must be formally signed by the responsible hospital official (preferably the hospital superintendent), attesting in each instance that the candidate was the operator.

Part II

The oral clinical and pathology examinations given all candidates are conducted by the entire Board and the Associate Examiners. Advance announcements of examination dates and place will be made in medical journals throughout the country. (Scheduled for Chicago, May 8 to 19, 1959.)

Examination consists of:

1. Oral examination before three or more examiners. All endeavor is made to adapt the details of the oral examination to each candidate's experience and practice. The examination is particularly directed to ascertain his familiarity with recent obstetrical and gynecological literature, the related basic sciences, the breadth of his clinical experience, and his general qualifications as a specialist in obstetrics and gynecology.

2. Pathology examination. The candidate is expected to identify and to discuss pathologic specimens and microscopic sections.

Examiners report orally upon each candidate to the assembled Board, after which the results of their investigations are considered jointly by the entire Board and Associate Examiners. After a general consideration of the details of the candidate's oral and pathology examinations, including a review of his capability and general adaptability, the candidate is passed or failed by the entire Board of Directors.

The final action of the Board is based upon the candidate's ethical and professional record, training, and attainments, as well as on the results of his formal examination.

When a candidate fails in Part II of the examination, he is not required to repeat Part I, but is required to repeat Part II only. One reexamination may be taken within three (3) years of the original examination and first failure without formal reapplication papers. Request for reopening of the candidate's original application must be filed with a reexamination fee of \$25.00 (see Application and Fees). Application for reexamination in Part II must be made by the candidate prior to September 1 of each year. Data regarding additional training or experience and Medical School or hospital appointments acquired in the interim must be cited in the letter and verified on a Supplemental Training Form obtained from the Office of the Secretary of this Board.

The reexamination fee will be effective only on original applications filed subsequent to the date of this announcement, namely, June 1, 1949. The candidate may be allowed to reappear at the examination following the one failed by him. The Board may, at its discretion, deny the candidate the privilege of reexamination.

Failure to exercise the privilege of reexamination within three (3) years, entails the filing of a new application with the usual application and examination fees.

After two failures in either Part I or Part II on the first application, the candidate may reapply with a new application and reapplication fee of \$35.00 and reexamination fee of \$100 and be readmitted to examinations once only. Exceptions to this ruling can be made only by action of the entire Board of Directors in annual session, usually to be based upon evidence of additional training and experience sufficient to warrant such action.

GRADUATE TRAINING RESIDENCIES

This Board, through the Council on Medical Education and Hospitals of the American Medical Association, has approved institutions providing the acceptable residencies in obstetrics and gynecology.

The American Board of Obstetrics and Gynecology has established the following requirements for its approval of a residency in a hospital department or service:

1. It is most desirable that the Chief of Service of the Department be certified by the Board, in the interests of the proper teaching of the specialty of obstetrics and gynecology. In lieu of such certification the Board will approve of individuals of recognized high professional standing in the specialty. At least one additional senior member of the staff should be similarly qualified.

2. Exceptions to the foregoing, in respect to the certified status of Chiefs of Service and others as outlined above, can be made by assent of the Committee on Residency Training, for adequate and justifiable reasons. As examples of the latter, the degree of F.A.C.S. in obstetrics-gynecology may be accepted in lieu of one of the two required certifications if the general reputation of the person concerned is known to the Committee as national or sectional in scope, or a professorial rank without certification might be acceptable.

3. In instances where the services of obstetrics-gynecology are not combined but are separate in any given hospital, the Chief of each such service seeking approval and at least one of his subordinates must be certified or otherwise qualified as outlined above. If obstetrics and gynecology are not combined in one department, approval can be granted only if arrangements are made for some degree of rotation of residents between both services, provided both services are separately approved.

4. If gynecology is classified in the given hospital as a subdivision or subservice of general surgery, approval cannot be granted for residency training in gynecology. Exceptions have been made if the subdivision of Gynecology is headed and staffed by a Chief and at least one other certified by this Board or otherwise qualified as specialists in obstetrics-gynecology, as specified above, thus ensuring an acceptable educational program in obstetrics-gynecology.

5. Departments holding official approvals for residency training are cautioned that their totals of residents appointed must be kept to the number specified in the A. M. A.—American Board approval notification. Dilution of training facilities by unauthorized appointment of residents in excess of these numbers may be cause for reinspection and changes in approval status of such hospitals and their special services.

6. For further details of requirements and qualifications for approval for residency training, hospital officials should refer to the latest special issues of *THE JOURNAL* of the A. M. A. as they appear during each year, dealing with these subjects, or should apply to the Council on Medical Education and Hospitals of the A. M. A. for bulletins entitled *Essentials of Approved Residencies and Fellowships*.

7. Application for residency approval must be made in triplicate on special forms provided for this purpose. These forms may be obtained from the Secretary of the Council on Medical Education and Hospitals of the A. M. A. All statements amplifying an application should also be made in triplicate. The hospital should keep a duplicate of all papers.

8. The formal application, with all papers, for residency training approval should be submitted primarily to the Council on Medical Education and Hospitals of the A. M. A., 535 N. Dearborn St., Chicago 10. Action is taken jointly by the Council and this Board after survey by the Council.

9. Approvals are granted according to adequacy of the training program and teaching facilities of various institutions on the following several bases: (a) one-year approval in obstetrics and gynecology (combined) or one-year approval in obstetrics and/or gynecology (separate), correlated basic science instruction being an essential part of the first year; (b) two-year approval in obstetrics and gynecology (combined) or two-year approval in obstetrics and/or in gynecology (separate), provided there is opportunity in the latter instances for some degree of rotation between the two

services as well as laboratory instruction in basic sciences; (c) three-year approval in obstetrics and gynecology (combined) or in obstetrics or in gynecology, provided there is opportunity for one to one and one-half years service in the branch of the specialty opposite to that in which the candidate holds appointment, as well as laboratory instruction in the basic sciences of both branches.

Exchange residencies within the specialty between approved institutions are acceptable and to be encouraged. Many authorities believe that training in more than one institution is broadening to the candidate. "Farming out" to unapproved institutions or services is not acceptable unless the work of such services is directly and carefully supervised by the Chiefs of the service in the approved hospital under which the man is actively appointed and working. This should be attested by such Chiefs.

Exchange residencies into other specialties cannot be permitted to subtract from the minimal required three (3) years of training divided between obstetrics-gynecology.

As noted elsewhere in the Bulletin two (2) years of post-training practice limited to the specialty is necessary before a candidate may apply for examination.

This Board has no objection to residency services being arranged by hospitals for periods longer than three (3) years, unless this dilutes the candidate's clinical training opportunities too much during the first three (3) years. However, the Board does not accept a fourth year, or more, of residency training as a substitute for any part of the required two (2) years of post-training practice.

The importance of post-training practice in the specialty is emphasized as an opportunity for maturing of the candidate and for colleague appraisal of a man's ability when working on his own responsibility in his chosen community.

Exception to this ruling may be made for men advancing from their training into and planning to remain in full-time teaching positions. These men then must complete at least two (2) years in such positions. Consequently the only institutions in which men may work as fourth and fifth-year residents and obtain credit for this time as "post-training practice" are those directly affiliated with approved Schools of Medicine as teaching hospitals for undergraduate instruction. These "full-time" men must hold faculty appointments, must have teaching duties with undergraduate students, must be given independent authority more than that of residents, and must make a declaration of intention to remain in full-time teaching work.

10. Any physician formally obligating himself to serve a residency in a Council on Medical Education and Hospitals of the American Medical Association-American Board of Obstetrics and Gynecology approved hospital and thereby eliminating other possible candidates from the position, who breaks his contract without justifiable cause, either before beginning his service or during his period of service, except by mutual consent and agreement between the candidate and the hospital, may be barred from the examinations for certification at the discretion of the Board.

11. It should be recalled by all concerned that credits for graduate training may be obtainable in certain instances for residency or assistantship service in hospitals not officially approved for residency training. Each such case must be individually considered, and credits will be largely dependent upon the teaching qualifications of those in charge of the service and the clinical facilities of the hospital in question.

PRECEPTORSHIP TRAINING

After July 1, 1958, the initiation of Preceptorship Training must be preceded by two (2) years of formal training in an institution approved for Residencies in obstetrics and/or gynecology. Candidates who propose Preceptorship Training must notify the Secretary of the Board of such

intent and request an application form. When this has been completed, signed by the Preceptor and Preceptee and returned to the Secretary, it will be submitted (as has long been true of Residency Training Programs) to the Residency Training Committee of the Board for their decision.

If the program is approved the Preceptor must supervise closely the candidate's work and keep an informative record of the candidate's performance. The Preceptor and the Preceptee shall report in writing to the Secretary of the Board at the end of each six months of Preceptorship, outlining the progress of the training program. This information will be placed in the candidate's application for admission to examination in order that it may be evaluated by the Credentials Committee.

As a general rule each year of Preceptor Training will receive a six-month credit toward the total of three years of training necessary for admission to examination. As is the case with candidates whose training has been entirely by formal Residency, each application will be evaluated finally by the Credential's Committee.

An acceptable Preceptor preferably shall be one certified by the American Board of Obstetrics and Gynecology and must have been certified for a minimum of five years. Fellowship in the American College of Surgeons or long experience and established reputation as an obstetrician-gynecologist without either of the above qualifications may qualify the Preceptor. Preceptor and Preceptee must work in a hospital approved by the Joint Commission on Accreditation of Hospitals.

The post-training practice requirement cannot be carried on concurrently with Preceptorship Training.

AMERICAN BOARD OF OPHTHALMOLOGY

GORDON M. BRUCE, Chairman, New York
 PAUL A. CHANDLER, Vice-chairman, Boston
 MERRILL J. KING, Secretary-Treasurer, Rockland, Maine
 JAMES H. ALLEN, New Orleans
 ALSON E. BRALEY, Iowa City
 ARTHUR GERARD DE VOE, New York
 F. BRUCE FRALICK, Ann Arbor, Mich.
 MICHAEL J. HOGAN, San Francisco
 HAROLD H. JOY, Syracuse, N. Y.
 JOHN S. MCGAVIC, Bryn Mawr, Pa.
 C. WILBUR RUCKER, Rochester, Minn.
 KENNETH C. SWAN, Portland, Ore.
 MISS LEA M. STELZER, Registrar, Box 236, Cape Cottage Branch, Portland, Maine

PREREQUISITES

1. High ethical and professional standing.
2. Full citizenship in the country where the candidate practices. (Limited to countries of North and South America, their possessions and territories, and the Philippine Republic.)
3. A degree from a medical school of high standing, satisfactory to the Board and approved by the Council on Medical Education and Hospitals of the American Medical Association.
4. Completion of an internship of not less than one year in a hospital approved by the same Council.
5. Completion, by the time of the Written Qualifying Test, of not less than 36 months (a total of 60 months is required of candidates practicing both ophthalmology and otolaryngology) of combined study, training, and practice of ophthalmology in approved medical schools, hospitals, clinics, dispensaries, laboratories, and private practice.

APPLICABLE TO APPLICANTS WHO START RESIDENCIES IN OPHTHALMOLOGY AFTER DECEMBER 31, 1956

Individuals who have completed three years of formal ophthalmological training (residency and basic science courses) may apply for the written qualifying test after completion of 12 months of practice or 12 months of institutional work, a total of 48 months. All other individuals, with less formal training, may apply for the written test after 60 months in ophthalmology or 72 months of combined ophthalmology and otolaryngology. A basic course is recognized as equivalent in time to residency training. All time requirements must be completed by the date of the written test.

GENERAL REQUIREMENTS FOR ALL CANDIDATES

1. Application forms must be filled out completely and accurately. Letters of endorsement, together with any other required credentials, must be sent to the Secretary's office before the published deadline date.
2. Fee of \$100.00 remitted with application.
3. A list of papers or books published.
4. Written qualifying test.
5. Practical examination.
6. Special review of ophthalmic surgery. (Instructions on Page 9.)
7. Licensure in the state, province, or country where the candidate practices.

SPECIAL TRAINING

This shall include:

1. Graduate study of the basic medical sciences which are fundamental to the intelligent practice of ophthalmology, particularly: anatomy, histology, embryology, optics, physiologic optics, visual physiology and psychology, pathology, bacteriology, pharmacology, disorders of ocular motility and binocular vision, perimetry, and in the skillful adjustment and use of instruments such as the ophthalmoscope, retinoscope, slit lamp, and microscope. Mere factual knowledge is not sufficient; the candidate must have had training in the application of these subjects and in their use in clinical ophthalmology, especially in refraction.
2. Active clinical experience in approved hospitals, clinics, dispensaries, and private practice. Library and laboratory facilities should be utilized for the intensive study of cases. These requirements may be met in various ways:

BASIC STUDIES

Anatomy and Histology of the Normal Eye
 Embryology and Developmental Abnormalities
 Biochemistry
 Pathology
 Microbiology and Immunology
 Optics and Physiological Optics
 Ocular Physiology
 Medical Ophthalmology
 Pharmacology
 Neuro-Ophthalmology
 Principles of Ophthalmic Surgery

These may be covered by graduate study—by a curricular course in the basic sciences related to Ophthalmology in an approved graduate medical school.

FEES

For original written test, \$100.00, payable with application.

For original clinical examination, \$50.00 payable on successful completion of the written test.

AMERICAN BOARD OF ORTHOPAEDIC SURGERY

EDWIN F. CAVE, President, Boston, Mass.
 WILLIAM H. BICKEL, Vice-president, Rochester, Minn.
 S. BENJAMIN FOWLER, Nashville, Tenn.
 GEORGE W. N. EGGERS, Galveston, Texas
 J. VERNON LUCK, Los Angeles
 HARRY D. MORRIS, New Orleans, La.
 FRED C. REYNOLDS, St. Louis
 JOHN ROYAL MOORE, Philadelphia, Pa.
 SAM W. BANKS, Secretary-Treasurer, 116 S. Michigan Ave.,
 Chicago

REQUIREMENTS FOR PART I EXAMINATION

1. Citizenship in the United States or Canada, or possession of papers showing intent to become a full citizen.

2. Graduation with a degree of Doctor of Medicine from a medical school of the United States or Canada recognized by the Council on Medical Education and Hospitals of the American Medical Association or graduation from a foreign school on the list of institutions surveyed by the aforementioned Council at the time the application is received.

Note: Graduates of foreign medical schools not on the list of the Council who pass the examination of the Educational Committee for Foreign Medical Graduates will be acceptable to the Board on the same basis as others possessing the degree of Doctor of Medicine as herein stated. Send inquiries to the Educational Council for Foreign Medical Graduates, 1710 Orrington Ave., Evanston, Ill. The Board will not accept completion of the examinations of the National Board of Medical Examiners in lieu of the examinations of the Educational Council for Foreign Medical Graduates.

After 1961 the list of approved foreign medical schools will be discontinued by the Council on Medical Education and Hospitals, and every foreign graduate will be required to pass the examination of the Educational Council.

3. Completion of an internship of not less than one year in a hospital approved at that time by the aforementioned Council, or if trained abroad, in institutions considered satisfactory by the American Board of Orthopaedic Surgery.

4. Completion, in addition to the above, of one year of resident training in general surgery in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association.

Note: This minimum year of training in general surgery may also be satisfied in one of the following alternate ways, subject to approval by the American Board of Orthopaedic Surgery, and can be accomplished at any time during the total period of residency training.

(a) A second year of surgical internship.

(b) Time spent in supervised research pertaining to orthopaedic surgery.

(c) Time spent on services which have overlapping interest with orthopaedic surgery.

(d) A fourth year of orthopaedic training, consisting of either 12 months of orthopaedic surgery or 6 months of such surgery and 6 months of fractures and related trauma.

(e) Surgical work in private practice—candidates will present a list of independent surgery prepared by the hospital record librarian and supplemented by letters from at least two colleagues evaluating their experiences.

(f) Surgical work in military service—credit is granted only after termination of military service and presentation of the Professional Training Record and letters from Chiefs of Services.

5. Two of the required three years of resident training in orthopaedic surgery under a program approved by the Residency Review Committee. (See list of approved services in the Internship and Residency Number of the Journal of the American Medical Association.)

FILING OF APPLICATION FOR PART I EXAMINATION

1. Application blanks for this examination are obtainable from the office of the Board. They must be returned to the office before November 30 of the year preceding the examination and must be accompanied by the registration fee of \$15.00, a nonrefundable fee.

2. The Committee on Eligibility is the sole arbiter in deciding whether the application is acceptable or not. Questions only as to rules and procedures may be answered by the Secretary.

3. Notification of acceptance is mailed to eligible applicants in February of the year of the examination.

4. A fee of \$40.00 is payable on receipt of said notification. The fee is not refunded if the candidate fails to appear at the scheduled examination, unless in response to his written request the Committee on Eligibility rules otherwise.

5. An application which has been accepted by the Committee on Eligibility remains valid for three years, after which time a new application and fee are required.

6. The date and place of the scheduled examination are announced in *THE JOURNAL* of the American Medical Association and also in the *Journal of Bone and Joint Surgery*. The examination is usually held in April in three cities strategically located in the eastern, central, and western sections of the country.

SCOPE OF PART I EXAMINATION

The examination is in two parts—written and oral.

The written part covers such subject matter as: fundamental principles of surgery, elementary fractures and related trauma, orthopaedic surgery, history taking, physical diagnosis and also anatomy, pathology, and physiology and biochemistry, insofar as related to the Specialty.

The oral portion covers the following five subjects: (1) anatomy; (2) pathology; (3) physiology and biochemistry; (4) surgery, and (5) fractures, related trauma and orthopaedic surgery.

RESULTS OF PART I EXAMINATION

1. Notification of the results of the part I examination is mailed by the Secretary of the Board to both successful and unsuccessful candidates.

Note: No information respective to the results is obtainable prior to the date of said notification. Furthermore, no certificate is issued to successful candidates of part I examination, and no details as to the grading of integral parts of the examination are made available to either applicants or diplomates of the Board.

2. Successful candidates may make application to the Board for admission to the part 2 examination, as explained in Section VII.

3. Unsuccessful applicants may repeat the part 1 examination in each of the two ensuing years, as necessary, and may do so without additional training requirements or the filing of a new application. They are, moreover, automatically reconsidered for examination by the Committee on Eligibility during the additional two years their application remains valid.

4. On receipt of the Committee's approval of his eligibility to repeat the examination, the applicant must pay to the Board the fee of \$40.00.

5. After the third and subsequent failures to pass the part 1 examination, the Committee on Eligibility may require the unsuccessful candidate to obtain the equivalent experience of one year of residency training acceptable to the Committee. A new application with a fee of \$15.00 must then be submitted for each additional examination, and this must, in turn, be followed by payment to the Board of the fee of \$40.00 on receipt of notification from the Committee.

REQUIREMENTS FOR PART 2 EXAMINATION

Note: Successful completion of the part 1 examination does not automatically enjoin the Board to declare the candidate eligible for the part 2 examination. Certain additional requirements as well as the approval of the Committee on Eligibility are requisite.

1. Part 2 examination must be taken within the five-year period following completion of the part 1 examination. After this lapse of time it will be necessary to take the part 1 examination over again before eligibility for the part 2 examination can be considered. In some cases the Committee on Eligibility may extend this time beyond five years because of problems presented by service in the military forces.

2. The FORMAL REQUIREMENTS leading to either "full" or "limited"* Certification by the Board are as follows:

(a) Full citizenship in the United States or Canada.

(b) License to practice medicine in the United States or Canada.

(c) High ethical and professional standards and satisfactory moral standing in the community.

3. TRAINING REQUIREMENTS.—The requirements for "Full Certification" (including the training completed prior to part 1 examination) are as follows:

(a) One year of general surgery or its equivalent.

(b) One year of adult orthopaedic surgery.

(c) Six months of fractures and related trauma.

(d) Six months of basic science training.

(e) One year of children's orthopaedic surgery.

Note: The training requirements for "Limited Certification" are identical with those for "full certification" except for the one year devoted to children's orthopaedic surgery. In its stead there is in addition to the above requirements—items 3a through 3d—a choice between the following two alternatives:

(a) Twelve months of training in adult orthopaedic surgery, or

(b) Six months of training in adult orthopaedic surgery and six months in fractures and related trauma.

PRACTICE REQUIREMENTS

These are:

(a) All practice requirements must be satisfied after completion of the formal training requirements.

(b) Practice must be limited to orthopaedic surgery for two years, except as other therapy may be required in the care of patients on emergency services.

(c) Candidates in private practice must spend 14 of the 24 months immediately prior to application for the part 2 examination in one locality to permit the Committee on Eligibility to evaluate the candidate's competence in practice.

(d) A candidate employed full time in institutions may satisfy practice requirements by serving a minimum of two years. The minimum requirement of two years of practice limited to orthopaedic surgery cannot be satisfied by mixing full time institutional work with preceding or subsequent time in private practice unless the Committee on Eligibility rules otherwise.

FILING OF APPLICATION FOR PART 2 EXAMINATION

1. Applications for admission to the part 2 examination must be received in the office of the Secretary of the American Board of Orthopaedic Surgery before August 15 of the year preceding the examination. Each application must be accompanied by payment of the nonrefundable fee of \$15.00.

2. An application remains valid for three years, after which time a new application and fee must be submitted.

*Training leading to Limited Certification will be discontinued after Jan. 1, 1962.

3. On notification from the Committee on Eligibility of approval of the candidate's application, a fee of \$75.00 must be paid to the Board. The notification is mailed out by the Secretary during the month of November preceding the part 2 examination.

4. Failure to appear for the scheduled examination entails forfeiture of the fee unless upon written request from the candidate the Committee rules otherwise.

SCOPE OF PART 2 EXAMINATION

1. The examination consists of two parts—written and oral.

2. The written part covers advanced work in all phases of orthopaedic surgery and trauma related to the muscular skeletal system in which the candidate has been trained.

3. The oral portion covers the following five items: (1) anatomy; (2) pathology; (3) children's orthopaedic surgery; (4) fractures and related trauma, and (5) adult orthopaedic surgery.

Note: Candidates for "limited certification" will not be examined in children's orthopaedic surgery, but will be tested personally in adult orthopaedic surgery and fractures and related trauma by two different groups of examiners.

RESULTS OF PART 2 EXAMINATION

A.—Successful Candidates

1. Candidates who have successfully passed the part 2 examination and who are otherwise acceptable to the Board on the basis of full requirements, receive appropriately a "full" or a "limited" certificate, stating that they have been found qualified to practice the Specialty of Orthopaedic Surgery in those fields in which they have been trained and examined.

2. Candidates who obtain "limited certification" are expected to delete children's orthopaedic surgery from their practice because of lack of approved training. They may subsequently become fully certified by completing one year of approved resident training in children's orthopaedic surgery and passing the Board examination in that field. A practice period of one year should intervene between the completion of the additional training and the examination. The examination fee is \$25.00.

B.—Unsuccessful Candidates

1. Candidates unsuccessful in the part 2 examination are so informed by the Secretary. The grades received on integral parts of the examination are not revealed either to the candidate or to diplomates of the Board.

2. Candidates who fail one oral examination or the written examination will be required to repeat this portion of the examination within three years upon payment of a fee of \$25.00.

3. Candidates who fail two oral interviews or one oral and the written test must repeat the entire examination as described in paragraph four.

4. The examination may be repeated on two subsequent occasions without requirement for further training or the filing of a new application. The eligibility of the candidate for reexamination receives automatic consideration from the Committee, and the results will be made known to him. On notification of his approval by the Committee on Eligibility, payment of the fee of \$75.00 must be made to the Board.

5. After a third or subsequent failures to pass part 2 examination; the candidate may apply to the Committee on Eligibility for permission to repeat the examination. The Committee may require the candidate to gain additional experience equivalent to one year of resident training. A new application and fee of \$15.00 must be submitted for each additional examination and this must be followed by payment to the Board of the fee of \$75.00 on receipt of Committee approval of the candidate's eligibility.

MILITARY SERVICE

1. Medical officers who have elected service in the military forces as their life career compete for certification on the same basis as do doctors in civilian practice; that is, they must satisfy the practice requirements by military assignments in which their duties are limited to the practice of orthopaedic surgery.

2. Medical officers on temporary or permanent status with the armed services who serve in military hospitals approved by the Residency Review Committee, obtain credit on the same basis as do residents on approved services in civilian hospitals.

3. Applicants who serve in military hospitals not approved by the Council for resident orthopaedic training, but whose experience is judged by the Board to have been equal to that obtained on the approved orthopaedic programs, may be granted the maximum credit of one year of resident orthopaedic training.

4. Applicants requesting such credit must submit completed "Professional Training Records" in addition to lists of operations performed by them, and letters from Chiefs of Services with evaluations of their experience.

5. Medical officers assigned to residency programs in civilian institutions on the approved list for orthopaedic training receive the same credit as do civilian candidates.

RECORDS OF SURGICAL CASES AND INSPECTIONS

1. Records of a specified number of consecutive surgical cases may be requested by the Board in order to evaluate properly the work of an applicant.

2. A representative of the Board may visit a community in order to evaluate properly the work of an applicant.

APPROVED RESIDENCIES

1. Training in the United States must be taken in institutions approved for resident training in orthopaedic surgery by the Residency Review Committee. The latter is made up of representatives of the Council on Medical Education and Hospitals of the American Medical Association and the American Board of Orthopaedic Surgery.

A complete list of approved institutions is published annually in the Internship and Residency Number of THE JOURNAL of the American Medical Association. The list is not obtainable from the office of the Board.

2. The integral parts of approved residencies are designated in the list by the following symbols: A—Adult Orthopaedic Surgery; C—Children's Orthopaedic Surgery; F—Fracture Surgery and related Trauma. Training in the basic sciences is given either as an integral part of these services or as a separate course. The length of training in various approved institutions is also indicated.

3. Candidates electing an additional year of training in adult orthopaedic surgery and surgery of fractures and related trauma in lieu of a year of children's orthopaedic surgery for the "limited certificate" may satisfy requirements by continuing their training in institutions approved for adult orthopaedic surgery, or adult orthopaedic surgery and fractures and related trauma.

4. Credit for time spent in institutional resident training will be granted only for the period the institutions are on the approved list. Credit may be given from the start of the resident training period if the institution becomes approved during the time the candidate is in training and the program is found to be satisfactory.

5. Candidates engaged in resident training in institutions which become disapproved in whole or in part receive resident training credit for the entire period during which their contracts are in force.

6. The term "fellow" is considered synonymous with "resident" only if the position occupied and the work performed by the former are in all respects equal to those of the

latter. The total number of residents and fellows performing resident training for credit must not exceed the number approved by the Residency Review Committee for a given program.

7. Institutions approved for resident training in orthopaedic surgery by the Residency Review Committee may utilize the training facilities of institutions not individually approved for resident training by the aforementioned Committee, provided that:

(a) The resident spends at least half of the minimum time required in each category of training in institutions approved for that type of training by the Council.

(b) The training supplements services in the same categories in which the institutions responsible for the training is approved.

(c) Whenever the supplemental service is used for six months of training, the program is inspected and is subject to approval by the Residency Review Committee.

Note: Services thus approved may request that they be included under the appropriate training program in the official list of residencies of the Council on Medical Education and Hospitals of the American Medical Association. Services giving five months or less of training are subject to approval but not necessarily inspection by the Residency Review Committee; they are not included in the official list of residencies of the Council.

(d) A maximum of three months is spent on services devoted to rehabilitation.

REQUIREMENTS OF INSTITUTIONS OFFERING ORTHOPAEDIC TRAINING

1. Institutions approved for full three-year programs and including all parts of the training requirements may integrate all parts so that they may be given concurrently.

2. Institutions now approved for less than three years of resident orthopaedic training must make cooperative arrangements with other approved institutions so as to provide complete three-year programs for all of the residents by January, 1962.

3. The minimum requirements of resident orthopaedic training programs are as follows:

(a) One year of training in adult orthopaedic surgery.

(b) Six months of training in the basic sciences.

(c) Six months of training in fractures and related trauma.

(d) One year of training in children's orthopaedic surgery if "Full Certification" is the aim, or else a second year of adult orthopaedic training in surgery, fractures, and related trauma if "limited certification" is elected.

(To be discontinued after January 1, 1962.)

4. Candidates who take an additional year of training in adult orthopaedic surgery and fracture surgery in place of a year of children's orthopaedic surgery may satisfy the requirements by devoting the additional year either solely to training in adult orthopaedic surgery or by taking six months of adult orthopaedic surgery and six months of fractures and related trauma. But the entire year must not be devoted solely to training in fractures and related trauma.

5. Training in adult and children's orthopaedic surgery must include observation and first-hand experience in diagnosis, treatment, and operative and postoperative care of orthopaedic problems.

6. Training in fracture surgery and related trauma must similarly include observation and first-hand experience in diagnosis, conservative and operative treatment, and postoperative care of recent and old fractures as well as other forms of related trauma.

7. Training in the basic sciences must instill a sound knowledge of anatomy, pathology, physiology, bacteriology and biochemistry, insofar as these relate to orthopaedic surgery.

8. Candidates may complete the residency requirements by training in several approved institutions, provided that all of the aforementioned requirements are satisfied.

9. No training period of less than six consecutive months in one institution may be credited toward resident training requirements, except as noted in Section XIV-7c.

10. Candidates in resident training may not engage in private practice of their own or receive credit for time spent in private office practice of others.

AMERICAN BOARD OF OTOLARYNGOLOGY

GORDON D. HOOPLE, President, Syracuse, N. Y.
 BERNARD J. McMAHON, Vice-President, St. Louis
 LAWRENCE R. BOIES, Minneapolis
 LOUIS H. CLERF, Philadelphia
 DANIEL S. CUNNING, New York

 FRANCIS L. LEDERER, Chicago
 FRANCIS E. LEJUENE, New Orleans
 JOHN R. LINDSAY, Chicago
 WILLIAM J. McNALLY, Montreal, Canada
 JAMES H. MAXWELL, Ann Arbor, Mich.
 PHILIP E. MELTZER, Boston
 WERNER MUELLER, Boston
 C. STEWART NASH, Rochester, N. Y.
 ARTHUR W. PROETZ, St. Louis
 GEORGE F. REED, Boston
 LEROY A. SCHALL, Boston
 HARRY P. SCHENCK, Philadelphia
 O. E. VAN ALYEA, Chicago
 DEAN M. LIERLE, Secretary-Treasurer, University Hospitals,
 Iowa City, Iowa

GENERAL REQUIREMENTS

The following general qualifications of candidates for examination are required by the board:

1. A candidate must have been a graduate for five years or more of a medical school approved by the Council on Medical Education and Hospitals of the American Medical Association.
2. A candidate must be of known good moral character and be ethical in his professional relationships.
3. A candidate trained in a foreign country must be able to give proof of medical and graduate training comparable to the requirements of the board.
4. A candidate from the United States or the Dominion of Canada must be a member of the American Medical Association or of the Canadian Medical Association respectively or other such medical societies of equal standing as are recognized by the Council on Medical Education and Hospitals of the American Medical Association.
5. Candidates from foreign countries who have received their training in otolaryngology in the United States and the Dominion of Canada are eligible for examination at the discretion of the American Board of Otolaryngology, provided they meet the general academic requirements of the Board.

SPECIAL REQUIREMENTS

1. A candidate must have had a general internship of at least one year in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association.
2. A candidate must be proficient in the applied basic sciences, fundamental to the intelligent practice of otolaryngology. These include anatomy of the ear, nose, and throat, neck, chest, esophagus and nervous system, gross pathology and histopathology, bacteriology, physiology, didactic otolaryngology and the general fundamentals of surgery. (This requirement may be fulfilled in a residency or fellowship service or in an approved organized post-graduate course.)

3. In addition to the general internship, the required clinical training in otolaryngology may have been acquired in any of the following ways:

(a) A three years' residency or fellowship in otolaryngology approved by the Council on Medical Education and Hospitals of the American Medical Association.

(b) A four years' approved residency or fellowship in otolaryngology and ophthalmology provided one half of the training has been in otolaryngology.

(c) A two years' approved residency or fellowship in otolaryngology or a three years' approved combined residency or fellowship in otolaryngology and ophthalmology, provided two years have been in otolaryngology and have been preceded by at least one year's approved residency training in surgery or medicine, or by an additional year in an approved internship.*

4. In exceptional circumstances certain candidates who do not meet all of the above requirements may be accepted for examination on recommendation of the credentials committee, substantiated by action of the board.

5. At least one year must be spent in private, group, or institutional practice of otolaryngology after the period of special training. This requirement may be waived in cases of candidates from foreign countries who are returning there for the practice of otolaryngology. Should such a candidate pass the examination the certificate of the board will be withheld until the board has been furnished evidence that the candidate has spent one year in the practice of otolaryngology. (When the requirement of an additional year referred to in No. 5 may impose handicaps as to rating, in the Military or Veterans Administration Services, the candidate may be considered under No. 4 above.)

6. A candidate may be qualified for examination, at the discretion of the American Board of Otolaryngology, if in addition to the General Requirements and Special Requirements, No. 1 and 2, he has limited his practice to otolaryngology for seven years in association with a hospital staff approved by the Council on Medical Education and Hospitals of the American Medical Association.

7. A physician who limits himself exclusively to the practice of peroral endoscopy may be granted limited certification in this field by the American Board of Otolaryngology irrespective of certification in any other specialty. Limited certification will be granted provided the candidate has spent not less than one year of training in a hospital approved for endoscopic teaching and has passed successfully examinations in the basic sciences as they pertain to this field, and didactic and clinical examinations covering diseases of the larynx, pharynx, neck, esophagus, stomach, tracheobronchial tree, lungs and mediastinum and certain aspects of cardiovascular disease as they pertain to peroral endoscopy. A limited certificate by the American Board of Otolaryngology will not be issued to physicians who have been certified in a specialty that employs peroral endoscopy in diagnosis and/or treatment because his major interest is in that specialty, not in endoscopy.

All candidates must comply with current board regulations, regardless of the time of filing application.

APPLICATION AND FEES

1. Application must be made in duplicate on special blanks procured from the secretary. The completed application blanks must be returned to the secretary, together with the other required credentials, at least 120 days in advance of the examination at which the candidate desires to appear.

2. The applications must be accompanied by two small photographs of the candidate, together with verification of the period of enrollment from the institutions where training in otolaryngology was obtained, and the names of two or more

*See Standards for Residencies in Otolaryngology published by the American Medical Association.

otolaryngologists, preferably diplomats of the board, from the vicinity of the candidate's place of residency, to be used as references.

3. The fee for the examination is \$150. Of this sum \$75 must accompany the application, of which \$50 shall be returned if candidate is not accepted for examination. No application will be acted on until the \$75 application fee is received. The remaining \$75 of the total examination fee of \$150 must be paid to the secretary on notification that the candidate has been accepted.

4. The fees have been carefully computed on a basis of cost of examinations and are used entirely for administrative expenses. Examiners serve without compensation other than actual expense.

5. The application remains valid for three years. An applicant must appear for examination within this time or forfeit the fee.

6. Candidates whose credentials have been found satisfactory and who meet the requirements of the board will be notified 90 days prior to the date of examination. The number of candidates who can be admitted to any one examination is limited. Due to a large number of applications on file, delay in assignment for examination may be inevitable. Appointments will be given in the order applications are accepted and on payment of the balance of the examination fee.

7. The board, acting as a committee of the whole, reserves the right to reject an applicant for any reason deemed advisable and without stating the same, and the action of the board shall be final.

EXAMINATION

Examinations will be held at such time and place as the judgment of the board may dictate. Advance notice of examinations will be given in THE JOURNAL of the American Medical Association and the several special journals devoted to otolaryngology. Insofar as is possible these will be held bi-annually at, or near, the time and place of meeting of the American Medical Association, or special societies, and of the American Academy of Ophthalmology and Otolaryngology. The examinations cover from two to four days.

Scope.—This examination encompasses all phases of otolaryngology and peroral endoscopy, including maxillofacial surgery, and surgery of the neck, excluding the thyroid.

The type of examination is as follows:

1. Clinical, covering the actual handling of patients, including history-taking, physical and functional examinations, the use of laboratory and x-ray findings, and a discussion of differential diagnosis.

2. Didactic, oral examinations covering all phases of otolaryngology.

3. Gross and microscopic pathology.

4. A written examination may be included when the board deems this advisable.

AMERICAN BOARD OF PATHOLOGY

JAMES W. KERNOHAN, President, Rochester, Minn.

WILLIAM B. WARTMAN, Vice-president, Chicago

JOHN J. ANDUJAR, Fort Worth, Texas

ROGER D. BAKER, Durham, N. C.

ISRAEL DAVIDSOHN, Chicago

DOUGLAS A. MACFADYEN, Chicago

ALAN R. MORITZ, Cleveland

JAMES N. PATTERSON, Tampa, Florida

S. BRANDT ROSE, Philadelphia

JOHN R. SCHENKEN, Omaha

SHIELDS WARREN, Boston

EDWARD B. SMITH, Secretary-Treasurer, Indiana University Medical Center, 1100 W. Michigan St., Indianapolis 7, Ind.

GENERAL REQUIREMENTS

1. Satisfactory moral and ethical standing in the profession.
2. License to practice medicine or a certificate of the National Board of Medical Examiners.
3. The applicant must devote his time primarily and principally to the practice of pathology.

PROFESSIONAL EDUCATION

1. Graduation from a medical school in the United States approved by the Council on Medical Education and Hospitals of the American Medical Association, or graduation from medical schools in other countries acceptable to the board.

SPECIAL TRAINING AND EXPERIENCE

1. The board admits candidates to examinations who are otherwise eligible and who have had either of two following types of training and experience.

(a) After five years, if four of the five years have been in institutions approved by the Council on Medical Education and Hospitals of the American Medical Association or by the board; or

(b) After 11 years if none of the training and experience has been in institutions so approved.

2. The specific requirements for those acceptable after five years are as follows:

(a) Pathology anatomy only.

(1) Four years of supervised study and training in an institution approved for residency training in pathological anatomy by the Council on Medical Education and Hospitals of the American Medical Association or by the board. It is immaterial whether the candidate holds the title of resident or fellow or assistant. Candidates may, at their own election, substitute not to exceed 12 months of a straight or rotating clinical internship or a fellowship or instructorship in any of the preclinical departments of a university for one of the four years. In addition, time, not to exceed 12 months, spent in a department of pathology of an approved school of medicine after the completion of the second year of undergraduate study may be counted for full credit toward the four years.

(2) One additional year, which may be a continuation of the preceding or may be independent practice of pathological anatomy in a hospital approved by the American Medical Association or other institutions acceptable to the board.

(b) Clinical pathology only.

(1) Four years of supervised study and training in an institution approved for residency training in clinical pathology by the Council on Medical Education and Hospitals of the American Medical Association or by the board. It is immaterial whether the candidate holds the title of resident or of fellow or assisant. Candidates may, at their own election, substitute not to exceed 12 months of a straight or rotating clinical internship or a fellowship or instructorship, in any of the preclinical departments of a university, for one of the four years. Candidates holding also a master's or doctor's degree in a special field of clinical pathology (bacteriology, serology, chemistry, parasitology, or hematology) may obtain time credit for not more than 12 to 24 months toward the four years for this work, regardless of whether it was taken before or after the medical degree. The evaluation of time credit will depend on how much of the broad field of clinical pathology was covered in the graduate work.

(2) One additional year, which may be a continuation of the preceding or may be independent practice of clinical pathology in a hospital approved by the American Medical Association or other institutions acceptable to the board.

(c) Pathological anatomy and clinical pathology.

(1) Four years of supervised study and training divided as follows: (a) two years of supervised study and training in pathological anatomy as outlined in the preceding para-

graph 2-(a)-(1), (b) two years of supervised study and training in clinical pathology as outlined in the preceding paragraph 2-(b)-(1). Candidates declared eligible before July 1, 1953, may, at their own election, substitute one year (twelve months) of a straight or rotating clinical internship for one year of this special training in clinical pathology. After July 1, 1953, all candidates applying for both pathological anatomy and clinical pathology will be required to have two years of supervised training in clinical pathology.

(2) One additional year, which may be a continuation of the preceding or may be independent practice of both pathological anatomy and clinical pathology in a hospital approved by the American Medical Association or other institutions acceptable to the board. After July 1, 1953, candidates who elect to claim credit for one year for a clinical internship must take this fifth year as supervised study and training in clinical pathology in institutions approved for residency training in clinical pathology by the Council on Medical Education and Hospitals of the American Medical Association or by the board. Candidates declared eligible after July 1, 1953, who do not take a clinical internship, may after four years of training as outlined in 2-(1)-(a) and (b), spend the fifth year in independent practice in an institution or laboratory acceptable to the board.

Note: As outlined in the preceding paragraphs, the total time requirements of the board are unchanged after July 1, 1953, namely, five years of study or practice after graduation from medical school, with exceptions noted in sections 2-(a)-(1) and 2-(b)-(1).

3. The specific requirements for those acceptable after 11 years are as follows: (a) The practice of pathology under circumstances acceptable to the board for a period of not less than 11 years. At the election of the candidates, a period not to exceed one year of straight or rotating clinical internship may be substituted for one of the 11 years. For those candidates in this category who have had some special study and training in pathologic anatomy or clinical pathology acceptable supervised study and training, only seven years of practice are required.

CREDIT FOR MILITARY SERVICES

Credit may be allowed for training and experience in pathology in the federal services during the period July 1, 1940, to June 30, 1947. This credit for training or experience or both is given on an individual basis and will depend on the opportunity the applicant has had, as indicated by his or her medical service record in the specialty of pathology.

After July 1, 1947, credit for those military services will be given on the same basis as it is in civilian institutions, except that the rule in the preceding paragraph will not apply to reserve officers who continue on active duty or are called to active duty after that date.

SPECIAL FIELDS OF PATHOLOGY, CLINICAL CHEMISTRY, CLINICAL MICROBIOLOGY, HEMATOLOGY, AND NEUROPATHOLOGY (IN FORCE AFTER JULY 1, 1954)

The trustees of the American Board of Pathology have adopted the following requirements for certification in special fields of pathology, effective July 1, 1954.

Candidates who have met all general requirements and have had special training and experience that is acceptable to the board in a special field of pathological anatomy or clinical pathology may apply to the board for certification in that special field. The board, at its discretion, may approve this application, and, after the candidate has successfully passed a prescribed examination or has fulfilled certain special qualifications (see below, section D), will issue a certificate designating the special field.

A. General Qualifications:

1. Satisfactory moral and ethical standing in the profession.

2. License to practice medicine or a certificate of the National Board of Medical Examiners.

3. The applicant must devote his time primarily and principally to the practice of pathology or the special field of pathology in which he is requesting certification.

B. Professional Education:

1. Graduation from a medical school in the United States approved by the Council on Medical Education and Hospitals of the American Medical Association or graduation from a medical school in other countries acceptable to the board.

C. Special Training and Experience:

The Board admits candidates to examination in special fields of pathology who are otherwise eligible and who have had either of the following types of training.

1. Applicants already holding a certificate of the board in clinical pathology or the combined certificate in pathological anatomy and clinical pathology (for qualification in clinical chemistry, clinical microbiology, and hematology), or in pathological anatomy (for qualification in neuropathology)—two additional years of supervised training in the special field of their choice in institutions approved by the Council on Medical Education and Hospitals of the American Medical Association or by the board.

2. Applicants not holding a certificate in pathological anatomy or clinical pathology—five years of training in the special field of their choice, provided four of the five years have been in institutions approved by the Council on Medical Education and Hospitals of the American Medical Association or by the board. Candidates may, at their own election, substitute not to exceed 12 months of a straight or rotating clinical internship or a fellowship or instructorship in any of the preclinical departments of a university for one of the four years. The fifth year may be a continuation of supervised training or may be independent practice of the particular specialty in a hospital approved by the American Medical Association or in other institutions acceptable to the board.

D. Special Qualifications—Certification Without Examination:

Prior to Jan. 1, 1960, the board at its discretion may certify candidates without examination if the following conditions have been met as of Jan. 1, 1955:

1. That the candidate has been for a period of five years of professional rank in the special field of his choice and in an approved medical school, or

2. That the candidate has been practicing his specialty for 10 years in a senior position in a hospital having an adequate department in the special field, approved by the Council on Medical Education and Hospitals of the American Medical Association, or in an institution acceptable to the board.

APPLICATION BLANK AND FEE

Application must be made on the special form that may be procured from the secretary and forwarded with other required credentials and the application fee. An application cannot be given consideration by the board unless it is accompanied by the application fee.

The application or examination fee for candidates is \$100. If the candidate fails in his examination he will be admitted to a second examination after one year. The applicant must pay an additional fee of \$50 before a second examination will be given.

The application fee of \$100 has been determined after careful consideration and is based on actual estimates of the expense of examination and administration. None of the board members receives any compensation for his services except actual expenses incurred.

If the applicant, for any reason, is deemed ineligible for examination by the board, his fee will be returned; however,

the application fee is not returnable after the candidate has officially been accepted for examination and notified to report for the examination.

EXAMINATIONS

Written and oral examinations will be held at the discretion of the board at or near the time and place of national medical meetings. If a number of applications from any region of the country are received, an examination in conjunction with a national medical meeting in that section will be arranged so that the financial outlay of the applicant in meeting the examiners will be as small as possible.

The examinations are to be based on the broad principles of pathology with emphasis on diagnosis, interpretation, and technique. The applicant may apply for certification in either pathological anatomy or clinical pathology or both.

The examinations in pathological anatomy consist of a written test, an oral examination on gross pathology, and a practical examination in microscopic pathology. The examination in clinical pathology consists of a written test and an oral and practical examination in the six phases of clinical pathology: bacteriology, hematology, clinical chemistry, parasitology, serology, and clinical microscopy.

DEFINITIONS

1. Pathological anatomy is that branch of pathology that deals with the morphological aspects of disease, recognition being given that that definition covers two phases of pathology: (a) the applied phase with special attention to the description and diagnosis of gross and microscopic specimens, (b) the academic phases of teaching and general morphological diagnosis.

2. Clinical pathology is that branch of pathology that deals with bacteriology, immunology, clinical chemistry, parasitology, hematology, endocrinology, clinical microscopy, and the application of the physical and biological sciences to the diagnosis, prognosis, and treatment of disease.

CRITERIA FOR APPROVAL OF INSTITUTIONS FOR TRAINING IN PATHOLOGY

In Sections C-2-a, C-2-b, and C-2-c of the General Requirements, it is stated that candidates must have certain periods of supervised study and training. The American Board of Pathology, in cooperation with the Council on Medical Education and Hospitals of the American Medical Association, certifies hospitals in the United States as satisfactory for this supervised study and training. Lists of these hospitals are published in the Internship and Residency Number of THE JOURNAL of the American Medical Association each year. In addition, the American Board of Pathology recognizes certain hospitals outside the United States and certain laboratories not connected with hospitals in the United States. Inquiries concerning these should be directed to the secretary of the board.

The general criteria for approval of hospitals and laboratories are both qualitative and quantitative. On the score of quality, consideration is given to the qualifications of the director of laboratories and in the associates and assistants, the supervision of work of the person in training, the excellence of the educational program, and the exactness and completeness of the laboratory work performed. On the score of quantity, consideration is given to the volume and distribution of laboratory work, both in absolute numbers and in relation to the size of the hospital, to the diversity and completeness of test performed, to the size and equipment of the laboratory, and to the number of professional and non-professional personnel in relation to the volume of work.

In general, the qualitative standards will determine whether or not a hospital or laboratory is approved and the

quantitative standards will determine whether the approval is for one, two, three, or four years of credit toward the requirements of the board.

In evaluation of applications the board takes into consideration the following criteria:

1. Director of laboratories or pathologist:

(a) It is required that the responsible head of the laboratory hold the certificate of the American Board of Pathology in the subject for which the hospital is approved, or be eligible for certification, and that he or she spend full time in the hospital. Full time is not interpreted in terms of hours, but rather that the director have no obligation outside the one approved hospital except in a university department of pathology in which he and the residents have an opportunity to participate in the educational program;

(b) In special instances, the equivalent of full time by two or more qualified persons will be accepted, and one person need not spend the entire working day in the laboratory;

(c) In special instances, two or more hospitals will be approved as a unit with a single full-time director of laboratories, if it is apparent that a satisfactory training program can be conducted;

(d) In hospitals with over 350 beds, it is expected that the professional staff, in addition to the pathologist, will include one or more persons with special training and qualifications in the subspecialties of clinical pathology.

2. Technicians:

There are no absolute criteria, but it is expected that the number of technicians will be proportional to the volume of laboratory work and that, insofar as possible, the technicians will hold the certificate of the Registry of Medical Technologists of the American Society of Clinical Pathologists.

3. Floor space of laboratory:

In general, it is believed that the size of the laboratory should be related to the size of the hospital and the volume of laboratory work. A minimal ratio is 4 sq. ft. of space in the laboratory, including morgue and autopsy room, for each bed in the hospital.

4. Equipment for the laboratory:

The variety and completeness of laboratory tests performed depend on the size of the hospital. In all hospitals there should be facilities for the more common tests in clinical pathology, for study of surgical specimens, and for performance of autopsies. In larger hospitals, the variety of tests performed should be larger, and in hospitals with over 500 beds all recognized laboratory procedures should be available for study and treatment of the patients.

5. Autopsy percentage:

No institution with a percentage of less than 15 will be approved, and those institutions with percentages between 15 and 40 will be given special scrutiny.

6. Examination of surgical specimens:

All surgical specimens should be sent to the laboratory for gross examination, and microscopic examinations should be made unless there are general or special reasons not to do so.

7. Indices:

There should be indices according to the names of the patients and the diagnoses of all surgical and autopsy material. Indices of clinical pathology are left to the discretion of the hospital.

8. Museum:

There should be available fixed anatomic and pathological specimens for study by the staff in proportion to the size of the hospital. Properly filed and indexed color photographs may in part be substituted for museum specimens.

9. Library:

A reasonably complete library of modern books and recent unbound and bound journals should be available to the hospital, and the more commonly used books and journals should be on hand in the laboratory.

10. Education program:

The work of the person in training should be supervised. Conferences, seminars, journal clubs, and demonstrations should be conducted as frequently as the volume of material and the size of the staff justifies. A clinicopathological conference must be held at least every two weeks.

11. Volume of laboratory work:

(a) As indicated in the following categories, no hospitals with less than 75 autopsies, 1,000 surgical specimens, and 25,000 tests in clinical pathology annually will be approved (Category D), except as outlined in the following paragraphs. It is the belief of the board that less material than this is inadequate for the training of a pathologist.

(b) In the field of clinical pathology, there should be a reasonable diversification of tests, and in each category there should be sufficient absolute volume to provide training and experience. There are no absolute criteria, but special scrutiny will be given to a hospital in which there is not a reasonable diversification and variety.

(c) In the field of pathological anatomy, a deficiency in either autopsies or surgical specimens may be made up by an excess of the other, if the deficiency does not exceed 20% of the minimum required in the ratio of one autopsy to 75 surgical specimens. Thus, in a hospital approved for one year in pathological anatomy and clinical pathology, the minimums are 75 autopsies and 1,000 surgical specimens. If a hospital has 2,500 surgical specimens, it is acceptable if there are only 60 autopsies.

If a hospital has met these minimal qualitative and quantitative standards, it will then, on the basis of the following quantitative standards, be approved for one, two, three, or four years of training in pathological anatomy, or clinical pathology, or both, or some special field as shown for the number of residents indicated.

CATEGORY A. In both pathological anatomy and clinical pathology for four years (as required of all candidates seeking certification in both fields who are examined after July 1, 1952).

Minimum: 150 autopsies, 1,750 surgical specimens, and 65,000 tests in clinical pathology for four residents. Additional resident for each 50 autopsies or 500 surgical specimens or 20,000 tests in clinical pathology.

CATEGORY B. In both pathological anatomy and clinical pathology for three years. This meets all requirements of the board for supervised training until July 1, 1952. Candidates examined after that date who seek certification in both subjects must take an additional year of supervised training in clinical pathology or pathological anatomy in another hospital that is approved for the deficiency of training required.

Minimum: 125 autopsies, 1,500 surgical specimens, and 50,000 tests in clinical pathology for three residents. Additional resident for each: 50 autopsies, 500 surgical specimens, or 20,000 tests in clinical pathology.

CATEGORY C. In both pathological anatomy and clinical pathology for two years. Candidates taking two years in these institutions must have an additional year (two years after July 1, 1952) in an institution in category A, B, or D.

Minimum: 100 autopsies, 1,250 surgical specimens, and 40,000 tests in clinical pathology for two residents. Additional resident for each 50 autopsies, or 500 surgical specimens or 20,000 tests in clinical pathology.

CATEGORY D. In both pathological anatomy and clinical pathology for one year. Candidates taking training in these institutions must have an additional two years (three years after July 1, 1952) in institutions that are approved for the deficiency of training required.

Minimum: 75 autopsies, 1,000 surgical specimens, and 25,000 tests in clinical pathology for one resident. Additional resident for each 50 autopsies, or 500 surgical specimens, or 20,000 tests in clinical pathology.

CATEGORY E. In pathological anatomy only, for three or more years. Candidates taking all training in these institutions will not be eligible for certification in clinical path-

ology unless an additional year (two years after July 1, 1952) is taken in clinical pathology in institutions that are approved for the deficiency of training required.

Minimum: 175 autopsies and 1,500 surgical specimens for three residents. Additional resident for each 50 autopsies or 500 surgical specimens.

CATEGORY F. In pathological anatomy only, for two years. Candidates taking training in these institutions will not be eligible for certification in clinical pathology unless they take one additional year full time in clinical pathology (two years after July 1, 1952) in institutions that are approved for the deficiency of training required, and will be eligible in pathological anatomy only if another year is taken in another institution that is approved for one or more years in pathological anatomy.

Minimum: 125 autopsies and 1,250 surgical specimens for two residents. Additional resident for each 50 autopsies or 500 surgical specimens.

CATEGORY G. In pathological anatomy only, for one year. Candidates training in these institutions will not be eligible in both pathological anatomy and clinical pathology unless they take an additional year in pathological anatomy and an additional year (two years after July 1, 1952) in institutions that are approved for these periods of training. Candidates seeking certification in pathological anatomy only must study an additional two years in institutions that are approved for that period of training.

Minimum: 75 autopsies and 1,000 surgical specimens for one resident. Additional resident for each 50 autopsies or 500 surgical specimens.

CATEGORY H. For postmortem part of pathological anatomy for two years. Credit is never allowed for more than two years. Candidates taking training in these institutions may pursue further training as follows: 1. For pathological anatomy only. An additional year in an institution in Category A, B, C, E, F, or G with assignment to surgical pathology principally. 2. For pathological anatomy and clinical pathology. An additional year (two years after July 1, 1952) in an institution in Category A, B, C, L, M, or N with assignment to clinical pathology and one-half year assigned to surgical pathology principally, in an institution in Category A, B, C, or J.

Minimum: 125 autopsies for two residents. An additional resident for each 60 autopsies.

CATEGORY I. For postmortem part of pathological anatomy for one year. Candidates taking training in these institutions may pursue further training as follows: 1. For pathological anatomy only. An additional two years in an institution in Category A, B, C, E, F, or G with general assignments. 2. For pathological anatomy and clinical pathology. An additional year (two years after July 1, 1952) in an institution in Category A, B, C, L, M, or N with assignment to clinical pathology; and one year to an institution in Category A, B, C, E, F, or G.

Minimum: 75 autopsies for one resident.

CATEGORY J. Surgical pathology part of pathological anatomy for one year. Credit is never allowed for more than one year, and the director of the laboratory must hold the certificate of the American Board of Pathology in pathological anatomy or be eligible for certification. Candidates training in these institutions may pursue further training as follows: (1) For Pathological Anatomy only. An additional two years in an institution in Category H or in an institution in Category A, B, or C with assignment to postmortem pathology only. (2) For Pathological Anatomy and Clinical Pathology an additional year (two years after July 1, 1952) in an institution in Category A, B, C, L, M, or N with assignment to clinical pathology full time, and an additional year to an institution in Category A, B, D, E, F, G, or H with assignment to postmortem pathology full time.

Minimum: 2,000 surgical specimens for one resident. An additional resident for each 1,000 surgical specimens.

CATEGORY K. Special pathology as part of pathological anatomy. Credit for not to exceed one-fourth the time credit (one year if seeking certification in pathological anatomy only, six months if seeking both pathological anatomy and clinical pathology) of candidates applying in pathological anatomy may be taken in special laboratories with limited activities such as neuropathology, orthopedic pathology, ophthalmic pathology, etc. The candidate who receives credit in this category may, on request, have the field of special pathology designated on the certificate of the board.

CATEGORY L. Clinical pathology for three or more years. Candidates taking three years of training in these institutions will not be eligible for pathological anatomy unless they take an additional two years in institutions approved for pathological anatomy.

Minimum: 100,000 tests in clinical pathology for three residents. Additional resident for each 50,000 tests.

CATEGORY M. Clinical pathology for two years. Candidates taking two years training in these institutions must take the same additional training as in Category L to be eligible for pathological anatomy also. To be eligible for clinical pathology only, an additional year of clinical pathology must be taken in an approved institution.

Minimum: 75,000 tests in clinical pathology for two residents. An additional resident for each 50,000 tests.

CATEGORY N. Clinical pathology for one year. Candidates taking training in those institutions must take an additional two years in an institution in Category A, B, C, L, or M assigned to clinical pathology for eligibility in clinical pathology only. To be eligible in pathological anatomy and clinical pathology, an additional two years in approved institutions is required.

Minimum: 50,000 tests in clinical pathology for one resident.

CATEGORY O. Special clinical pathology as part of clinical pathology. Candidates applying for clinical pathology only may receive credit for not in excess of one-quarter of the training period (one year if seeking certification in clinical pathology only, six months if seeking both pathological anatomy and clinical pathology) for work in a special field of clinical pathology, such as bacteriology, serology, etc. Under these circumstances, on request, the special field will be designated on the certificate of the board.

CATEGORY P. Research: Residence in certain institutions in which full time is devoted to research with a direct application to the practice of pathological anatomy or clinical pathology may be accepted for credit not to exceed one-third the time requirement (20 months if no clinical internship, 16 months if a clinical internship was taken). The board encourages research and believes that all candidates should carry on investigation during their training in all institutions. Therefore, this category is only for those wishing to do full time research.

AMERICAN BOARD OF PEDIATRICS

LEE F. HILL, President, Des Moines, Iowa
 JAMES MARVIN BATY, Vice-president, Boston
 ROBERT B. LAWSON, Secretary-Treasurer, Miami, Fla.
 JOHN A. BIGLER, Chicago
 CRAWFORD BOST, San Francisco
 JAMES G. HUGHES, Memphis, Tenn.
 J. A. JOHNSTON, Detroit
 RALPH V. PLATOU, New Orleans
 A. ASHLEY WEECH, Cincinnati
 JOHN MCK. MITCHELL, Executive Secretary, 6 Cushman Rd., Rosemont, Pa.

REQUIREMENTS FOR CERTIFICATION*

All candidates for examination for certification must meet the following requirements:

1. Graduation from an approved medical school.
2. Licensure to practice in the United States prior to issuance of a certificate except in those situations in which a license to practice is not required.
3. One year of rotating, pediatric, or other internship in an approved hospital.
4. Two years of specialized residency-type training in an approved pediatric center.

At least one year of the two years of required residency training must be a full-time medical pediatric inpatient residency or internship in an approved institution. The second year of required residency training may be met in the ways listed below, although the board recommends that whenever possible candidates complete the two years as regular residents.

(a) Graduate School courses will be accepted only in exceptional cases by prior arrangement, up to a maximum of nine months.

(b) A maximum of three months' credit each is allowed for full-time residency type training in allied pediatric subjects such as pediatric allergy, pediatric psychiatry, pediatric pathology, pediatric radiology, newborn service, etc.

(c) A maximum of six months' credit is allowed for residency training in an approved contagious disease hospital.

5. A subsequent term of two years of specialized study or practice or a combination of the two.

Credit for one year toward this requirement is allowed for medical military service regardless of the assignment. The maximum credit that any candidate may receive toward the practice requirement for work done prior to the completion of residency training is one year.

Research residencies which involve little or no clinical training are creditable for only three months. Research residencies which include significant clinical training may be prorated to a total of six months for a year of service. Teaching fellowships may not be offered in lieu of residency appointments.

Both research residencies and teaching fellowships are, of course, entirely acceptable in satisfaction of the practice or further study requirements. Portions of a research residency not applicable for residency training credit may be carried over for practice credit.

Preceptorships are not accepted for credit toward the residency requirement, but are accepted toward the practice requirement.

GRADUATES OF MEDICAL SCHOOLS IN CANADA

Graduates of approved medical schools in Canada and those who have received their internship and residency training in pediatrics in hospitals approved by the Royal College of Physicians and Surgeons of Canada will be eligible for examination for certification under the same regulations as those trained in the United States.

GRADUATES OF FOREIGN MEDICAL SCHOOLS

Citizens of the United States.—Citizens of the United States of America who are graduates of medical schools other than those in the United States and Canada will be

*A booklet of information, presenting in more detail the data published here, may be obtained from the Executive Secretary of the Board. To avoid misunderstanding, the board urges any candidate whose training is not clearly covered in these regulations to communicate with that office. Whenever possible, this should be done before entering upon the appointment in question.

processed for eligibility for examination for certification if they can meet all the following requirements:

1. They are graduates of medical schools recommended by the Council on Medical Education and Hospitals of the American Medical Association.

2. They hold a license to practice in the United States.

3. They can meet the internship and residency training requirements of the board as detailed above with the following provisions:

(a) Internship and residency training must be served in hospitals approved by the board in the United States.

(b) A maximum of the internship and one year of residency training may be allowed for such experience obtained in a small list of foreign hospitals recognized by the board. The other year of residency training must be served in a straight inpatient medical pediatric residency appointment in an approved hospital in the United States.

Citizens of the United States of America who are graduates of medical schools other than those in the United States or Canada, and which are not recommended by the Council on Medical Education and Hospitals of the American Medical Association, may be accepted for examination for certification after they have passed successfully part 2 of the examinations of the National Board of Medical Examiners, or the qualification examination of the Educational Council for Foreign Medical Graduates, provided they meet all other requirements of the Board as provided in regulations governing such candidates.

Citizens of Other Countries.—Properly qualified candidates who are permanent residents in and citizens of other countries and are licensed to practice there and who have fulfilled the residency training requirements listed above in the United States or Canada may apply for examination for certification by the American Board of Pediatrics.

Such foreign candidates who are returning to their own country at the end of their training period may be examined without completion of two full years in the practice of pediatrics. The residency training requirements must be completed in full in advance of admission to any part of the examinations.

A special certificate, appropriately identified to distinguish it from the regular certificate of this board, may be issued to such candidates who have passed successfully the examinations of this board after they have completed such a period of practice or further study in their own country which when added to similar experience in the United States or Canada, make a total of two years of the practice of pediatrics.

INFORMATION CONCERNING EXAMINATIONS

The examinations for certification are given in two sections: part 1 is written, part 2 is an oral examination.

Part 1—Written

Written examinations are objective in type and are given once each year, usually in January, simultaneously at a number of places scattered throughout the country, and at a few locations abroad. Candidates must pass the written examination before admission to the oral examination will be authorized.

Part 2—Oral

Oral examinations are held four to six times each year at centers offering suitable facilities, in locations determined by proximity to the largest number of eligible candidates. One examination session each year is scheduled at a location

closer to candidates from some less populous area. As far as possible, candidates are given a choice of locations, taking into account date application is filed, date of eligibility and proximity to the examination site.

Candidates who are admitted to the oral examination (part 2) will not be informed of their grade on the written portion. Their relative standing in part 1 will, however, be utilized in final decision with regard to passing.

Candidates who fail after taking part 2 will not be required to retake part 1 but may be advised to do so in order that they may have an opportunity to improve a low score.

APPLICATION

Application must be made on special blanks, which will be furnished by the executive secretary after a preliminary survey of the applicant's training. Applications may be submitted one year in advance of eligibility date; they will not be accepted earlier. The number of candidates admitted to a given written examination will be determined by the number who can be examined orally during that year, plus a reasonable number of alternates.

LETTERS OF RECOMMENDATION

Letters from two competent pediatricians recommending each applicant must be sent to the executive secretary of the board. These letters should not accompany the application but should be sent directly to the executive secretary.

FEEES

The application fee is \$75.

The full fee must be remitted with the application. No additional fee is required for second and third written examinations. The fee for second and third oral examinations is \$50 each.

CERTIFICATION IN SUBSPECIALTY OF ALLERGY

WILLIAM C. DEAMER, Chairman, San Francisco

SUSAN DEES, Durham, N. C.

JEROME GLASER, Rochester, N. Y.

GEORGE B. LOGAN, Rochester, Minn.

HARRY L. MUELLER, Boston

RICHARD H. TODD, Washington, D. C.

The American Board of Pediatrics has established certification in allergy as a subspecialty of pediatrics.

All candidates must hold a certificate in Pediatrics before submitting an application for examination in Allergy.

Each allergy application is individually considered and must be accepted by the subspecialty board.

INFORMATION CONCERNING EXAMINATION

Allergy examinations consist of written and oral portions. The written examination will be given once a year under a local monitor and must be passed before the candidate is admitted to oral examination. Oral examinations will be held at times and places designated by the subspecialty board. Ample notice will be sent to candidates.

FEEES

The application fee for certification in allergy is \$100.

The full fee must be remitted with the application.

No additional fee is required for second and third written examinations. The fee for second and third oral examinations is \$50 each.

Application forms will be forwarded on request to the office of the Executive Secretary of the American Board of Pediatrics and should be returned to that office when completed. All correspondence should be addressed to him.

REQUIREMENTS

(1) Certification in Pediatrics.

(2) Two years of full-time training in an approved allergy clinic and its associated hospital. At least half of such training must be in pediatric allergy. Three types of allergy clinics have been approved: (a) pediatric, (b) adult, and (c) mixed.

Two years of training in clinics of type (a) or (c), or one year in each, is acceptable. One year in (b) and the other in (c) is not acceptable. Please see Intern and Residency number of J. A. M. A. for listing of approved hospitals and associated clinics. In place of (2) the candidate may take (3).

(3) One year full-time training in an approved allergy clinic plus two years part-time training of at least 200 hours each year in an approved allergy clinic and hospital. At least half of the total experience must be in pediatric allergy. Thus, training which consists only in a combination of (b) and (c) as defined above does not qualify.

OR

(4) Five years, part-time, at least 200 hours each year, in an approved pediatric or mixed allergy clinic and its activities.

RESEARCH: If at least half of a candidate's qualifying full-time training is in clinical pediatric allergy, the remainder may be spent in supervised allergy research or in training in adult allergy at an approved clinic, or in a combination of the two.

PRECEPTORSHIP: Preceptorship alone is not acceptable, but part of a full-time training program (50% or less) may include supervised training in the private office of a qualified allergist, provided such an arrangement is part of the training program of an approved clinic and the preceptor and clinic training run concomitantly.

CREDIT FOR COURSES: Established courses or seminars in Allergy and Immunology, which are attended during the training period, may be credited for part-time training. Instruction such as is given in these subjects by the American Academy of Pediatrics, the Academy of Allergy, or the College of Allergy are examples. Three hours of credit toward part-time training will be allowed for each hour of instruction, but not over 20% of required part-time training hours may be so credited each year.

The candidates should be prepared for oral and written examinations in the theory and practice of allergy. This will include immunology, atopy, allergy of infection, experimental hypersensitivity, the clinical manifestations of allergic disease, especially as they appear in infants and children, and also allergic factors that may be present in other diseases. They must be prepared to discuss diagnostic procedures and methods of treatment and the pharmacology of drugs and physiology of respiration as they relate to allergy and asthma. In controversial matters, they should be familiar with arguments on both sides of such questions.

CERTIFICATE

When accepted the diplomate will receive from the American Board of Pediatrics a certificate in allergy and will be listed as a specialist in allergy.

Prospective applicants for certification in the subspecialty of allergy may apply to the executive secretary of the American Board of Pediatrics.

AMERICAN BOARD OF PHYSICAL MEDICINE AND REHABILITATION

ROBERT L. BENNETT, Chairman, Warm Springs, Ga.

WILLIAM H. SCHMIDT, Vice-chairman, Philadelphia, Pa.

ARTHUR S. ABRAMSON, New York

DONALD A. COVALT, New York

O. LEONARD HUDDLESTON, Santa Monica, Calif.

H. WORLEY KENDELL, Peoria, Ill.

A. B. C. KNUDSON, Washington, D. C.

FREDERIC J. KOTTKE, Minneapolis, Minn.

DONALD L. ROSE, Kansas City, Kans.

ARTHUR L. WATKINS, Boston, Mass.

EARL C. ELKINS, Secretary-Treasurer, 200 First St., S. W., Rochester, Minn.

QUALIFICATIONS

A. Satisfactory moral and ethical standing in the profession.

B. A legal license to practice medicine in one or more of the states of the United States, its territories, the District of Columbia, or one or more of the provinces of Canada.

C. Graduation from a medical school approved by the Council on Medical Education and Hospitals or graduation from a foreign medical school which, in the opinion of the board, offers medical education equivalent to such an approved school; completion of an internship in a hospital approved by said Council.

D. A period of study after the internship of not less than three years in a residency approved by the above mentioned Council. This period of study shall include graduate training in basic science as related to physical medicine and rehabilitation and not less than two years of clinical training and experience in physical disabilities related to the fields of rheumatology, neurology, neurosurgery, orthopedics, and medicine.

E. An additional period of not less than two years in full time practice of physical medicine and rehabilitation.

Training in approved residency programs in closely allied medical-surgical fields may be acceptable in part (for D above), but such credit is limited and based on individual interpretation by the board.

In selected cases, a candidate may be deemed eligible for examination on the basis of eight years of full time practice in physical medicine and rehabilitation (as a substitute for D and E above).

EXAMINATION

The examination for certification is given in two parts. Part 1 is written, part 2, oral. Examinations are given once a year and cover certain aspects of the basic sciences and the clinical aspects of physical medicine and rehabilitation (including the role of associated personnel such as the physical therapist, occupational therapist, clinical psychologist, social service worker, and vocational guidance counselor).

APPLICATION

The application form shall contain a record of the candidate's premedical and medical education, internship, graduate study, and verification of full-time practice in the specialty. The application shall be accompanied by a fee of \$75 if the candidate is applying for part 1 only, and by a fee of \$125 if applying for parts 1 and 2. (In case of rejection of the application, evaluation fee of \$25 will be retained by the Board, and the examination fee will be refunded.)

CERTIFICATION

Certificates of the board shall be issued to the effect that the applicant has been found qualified as a specialist in physical medicine and rehabilitation.

AMERICAN BOARD OF PLASTIC SURGERY

S. MILTON DUPERTUIS, Chairman, Pittsburgh
 CLARENCE R. STRAATSMA, Vice-Chairman, New York
 LESLIE H. BACKUS, Buffalo
 TRUMAN G. BLOCKER, JR., Galveston, Tex.
 HERBERT CONWAY, New York
 ALBERT D. DAVIS, San Francisco
 JOHN B. ERICH, Rochester, Minn.
 WILLIAM H. FRACKELTON, Milwaukee
 JAMES B. JOHNSON, Beverly Hills, Calif.
 EDWARD A. KITLOWSKI, Baltimore
 J. J. LONGACRE, Cincinnati
 ROBERT E. MORAN, Washington, D. C.
 GERALD B. O'CONNOR, San Francisco
 KENNETH L. PICKRELL, Durham, N. C.
 FRANK McDOWELL, Secretary-Treasurer, St. Louis
 MRS. ESTELLE E. HILLERICH, Corresponding Secretary,
 4647 Pershing Ave., St. Louis 8

GENERAL REQUIREMENTS

1. Moral and ethical standing in the profession satisfactory to the board.

The board, believing that the practice of "fee splitting" is pernicious, leading as it does to traffic in human life, will reserve the right to inquire particularly into any candidate's practice in regard to this question.

2. Those whose activities are limited to the practice of plastic surgery.

3. This board will accept as applicants for examination only those who are full citizens of the United States or Canada. Notarized statements, not original citizenship papers, attesting to the fact of full citizenship in the United States or Canada must be furnished by foreign-born applicants when the application is filed. Such candidates must have at least two years of practice in plastic surgery in North America after completing the training required by the board.

PROFESSIONAL REQUIREMENTS

The board considers the requirements outlined below to be minimal in attaining its purposes and encourages candidates to take advantage of broadening experience in other fields. Candidates must fulfill the requirements that are in force at the time of their examination and/or certification.

1. Graduation from a medical school of the United States or Canada recognized by the Council on Medical Education and Hospitals of the American Medical Association, or graduation from a foreign school considered acceptable by the board.

2. Completion of an internship of not less than one year in a hospital approved by the same Council.

3. Two years of postgraduate work in general surgery, beyond the intern year, as a resident or an assistant resident in a hospital approved by the same Council. This requirement will be increased to three years for those candidates who start their residencies or preceptorships in plastic surgery on or after July 1, 1960.

4. Training in general plastic surgery, including maxillo-facial surgery, for an additional period of not less than two years in a residency approved by the same Council, or in a preceptorship approved by the Board. In fulfilling this requirement, there is a limit of one year's credit given for all work done in all governmental plastic surgery residencies (Army, Navy, Veterans Administration hospital, etc.) regardless of the time put in by trainees in such residencies. It is required that all such trainees take one additional year of approved training in plastic surgery in a civilian residency or preceptorship.

5. During these years of training following the internship year, a candidate must hold positions of increasing responsibility for the care and management of patients with surgi-

cal conditions. When a candidate receives his training in more than one institution, it is equally imperative that he hold positions of increasing responsibility. He must have sufficient operative experience to acquire surgical skill and judgment through the performances of surgical operations with a high degree of responsibility, but under circumstances providing adequate opportunity for consultation and advice.

6. An additional period of not less than two years of practice in plastic surgery. If a candidate elects to spend one or two additional years in approved training in plastic surgery, one year of such training will be credited toward the required two years of private practice if it can be demonstrated that the candidate held a position of increasing responsibility. It is imperative that one year be in actual private practice in such instances.

The Board gives credit only for training in plastic surgery received in the United States or Canada but may, at its discretion, give credit towards the required private practice period for training in plastic surgery received in countries other than the United States and Canada, each case being determined individually.

The above training in plastic surgery may be taken as a resident in an approved hospital or under an approved preceptorship offering equivalent training (a list of currently approved preceptorships is available from the board office).

The period of special training should emphasize the relation of the basic sciences—*anatomy, pathology, physiology, biochemistry, bacteriology*—to the application of surgical principles which are fundamental in all branches of surgery, and especially to plastic surgery. In addition, the candidate must understand and be trained in the following subjects: the care of emergencies, shock, hemorrhage, blood replacement, electrolyte and fluid balance, choice of anesthetics, chemotherapy, acidosis and alkalosis, narcotics and hypnotics, wound healing, etc.

The board reserves the privilege of requesting lists of operations done solely by the candidate for one or more years, or of requesting special and extra examinations, written or oral and practical, and of requesting any specific data concerning the candidate that may be deemed advisable before making final decision for certification.

Eligibility rulings or an evaluation of a candidate's qualifications or training cannot be made by the secretary or by any one member of the board. Official evaluations of qualifications are made only by the committee on credentials and requirements or by the entire board where necessary after a review of the candidate's formal application for such rulings. The applicant must allow at least two months for such requests to make the rounds of the committee.

TRAINING FACILITIES

Residencies.—The American Board of Plastic Surgery, in cooperation with the Council on Medical Education and Hospitals of the American Medical Association and the American College of Surgeons, evaluates training facilities in institutions providing acceptable residencies in plastic surgery. The board does not assume the responsibility for independent inspection and approval of residencies. It will inspect and make recommendations for or against approval of a residency in plastic surgery only after the director of the residency has applied to the Residency Review Committee in Plastic Surgery of the Council on Medical Education and Hospitals of the American Medical Association for approval of the residency and after the Council has notified the board to that effect. Therefore, any diplomate of the board wishing approval of a residency under his supervision should apply to the Council for such approval.

The board will make its own inspection, preferably at the same time as the American Medical Association Council inspection, and will report its findings to the Council. Upon completion of consideration by the Council and the board, the hospital will be notified by the Council of the joint

action that has been taken, and the hospital and the secretary of the board will be notified simultaneously by the Council to avoid any misunderstanding as to the status of the program.

Preceptorships.—In certain instances the board will accept, in lieu of the required two years' training in an approved residency, training in an approved preceptorship under a fully qualified plastic surgeon when such preceptorship is properly organized and supervised to give the trainee adequate experience and training in plastic surgery of a well-rounded nature. Trainees will be required to keep a detailed record of their experience, presenting this report to the board annually on a report form supplied by the board on request. In preceptorship programs of training it would be well for the preceptor to report annually to the board the name and qualifications of any preceptee under his supervision and the work done by the preceptee. Neither the board nor its individual members can be responsible for the placing of applicants for training. The board considers those residencies approved by the Council on Medical Education and Hospitals of the American Medical Association as acceptable facilities for training in plastic surgery.

It should be kept in mind by all that the primary interest of the board is to encourage well-rounded training in plastic surgery with the aim of producing plastic surgeons capable of doing good work in the wide variety of cases which may come under their care. The standards set up by the board both for preliminary general surgery and for specialized plastic surgery training, are established in an effort to further this aim. The quality of the training received should be reflected in the candidate's ability to achieve good results in his practice, and the examinations of the board are an attempt to judge the ability of the candidate in the specialty of plastic surgery.

Before training in plastic surgery is begun, the plastic surgeon in charge of the residency or preceptorship should ascertain that the trainee's preliminary training in general surgery meets the requirements of the board, that is, two years of residency training in general surgery after the internship year.

The training in plastic and maxillofacial surgery (at least two years) whether in a residency or a preceptorship, should cover a wide field of plastic surgery, both as to type and anatomic distribution. It should include experience in the treatment of congenital and acquired defects and deformities of the face, neck, body, and extremities, for both functional and esthetic reasons. There should be available sufficient material of a diversified nature so that the trainee will be able to pass the examinations of the board after the period of training and the two additional years of private practice. If the available material on one service is inadequate, the deficiency should be made up by affiliation with another plastic surgeon on another service so that a broad experience will be obtained in plastic surgery. The trainee should be provided an opportunity to operate under the direct supervision of the plastic surgeon in charge, and with increasing ability, should be given an opportunity to operate independently on suitable cases under more remote supervision.

MILITARY CREDIT

Credit for military service is given on an individual basis, each case being considered on its own merits, and the amount of credit allowed is determined by the board when the information is submitted with the application.

The Medical Officer's Professional Training Record (DD Form 408) is a record maintained by individual Medical Corps officers for presentation to the various authorized accrediting boards toward certification. This record is presented by the officer to the Boards for evaluation of the military experience acquired by Medical Corps officers while serving in the Army Medical Service. This form has been prepared by the surgeons general of the armed services with

the assistance of the Council on Medical Education and Hospitals of the American Medical Association and is distributed by the offices of the Surgeons General to their personnel. It is highly important that prospective applicants obtain a copy of this form and that it be submitted with their credentials for evaluation by the board.

CASE REPORTS

Upon approval by the board of a candidate's application for certification, each candidate is required to submit to the board 35 or more case reports illustrative of his independent work in the field of general plastic surgery.

Candidates are admitted to examination only after submitting case reports that meet the required standards of the board and that have been approved by the committee on credentials and requirements.

Case reports must be submitted within one year from the time of such request; otherwise a new application must be filed. The case reports shall conform to conditions which the board may from time to time specify.

Case reports must be received in the office of the board by January 1 for those who desire to be considered for the spring (May-June) examinations of the board and by July 1 for the fall (October-November) examinations. There will be no exceptions to these two deadlines.

The 35 case reports must be of a diversified nature and must be submitted to the office of the board together with before and after photographs. They should be of the following distribution:

1. Cleft lip: 1 to 3 cases
2. Cleft palate: 1 to 3 cases
3. Traumatic defects requiring reconstructive surgery:
 - (a) Face and neck: 2 to 4 cases
 - (b) Body: 1 to 4 cases
 - (c) Extremities: 1 to 6 cases
4. Acute burns: 2 to 4 cases
5. Fracture of facial bones, excepting nasal fractures: 1 to 3 cases
6. Esthetic operations of sufficient variety: 6 to 12 cases
7. Plastic surgery of the hand: 2 to 4 cases
8. Malignancies, or conditions prone to malignancies (eradication and repair):
 - (a) Face: 2 to 4 cases
 - (b) Body: 1 to 3 cases
 - (c) Extremities: 2 to 4 cases
9. Congenital anomalies: 1 to 6 cases
 - (a) Examples:
 - (1) Syndactylism
 - (2) Congenital absence (partial or total) of external ear
 - (3) Hypospadias
 - (4) Bands (constricting)
 - (5) Thyroglossal duct cyst
 - (6) Extensive nevi, etc.

If the case reports and lists of operations are approved, the candidate will receive subsequent information regarding taking the examinations. The board at its discretion may request certification of case reports by the hospital where the operations were performed. The following form should accompany the case reports: "I hereby certify that the planning and essential surgical procedures described herein were carried out by me as an independent operator."

Every candidate's final acceptability for examination is based not only on the evaluation of his training qualifications but on his professional ability as a plastic surgeon, his ethical standing in the community, and the strict limitation of his work to plastic surgery.

A candidate should remember that these case reports are documentary evidence of his ability and that the material in them and the manner of presentation are important evidences of his ability.

EXAMINATIONS

In instances where a candidate submits case reports that do not meet the standards of the board, he will be required to submit additional case reports or an entirely new set of 35 within a period of one year. If this second series of new case reports again do not meet the standards of the board, the candidate may be required to take additional training (of length and type specified by the board) before he will be allowed to submit any further case reports.

After a candidate has been notified that he has fulfilled the preliminary requirements and that his case reports have been approved, he will be required to take the qualifying examination within a period of three years.

After approval of the case reports, and prior to the examination, the candidate will be visited at his place of practice by a member or members of the board to observe him operate and to examine a number of his preoperative and postoperative cases.

The qualifying examinations are given twice yearly, in the spring and fall. The spring examination is given immediately preceding, during, or following the annual meeting of the American Association of Plastic Surgeons (usually in May), and the fall examination is given immediately preceding, during, or following the annual meeting of the American Society of Plastic and Reconstructive Surgery (usually in October). Candidates are required to go to the designated center for the qualifying examination, which will last three days. These centers will be the city in which the meetings of these two organizations are held if the proper clinic and hospital facilities are available, otherwise in some nearby city where such material is available. Arrangements for all examinations are made by the examination committee.

A written examination will consume all of the first day and half of the second day. An oral and practical examination will consume the afternoon of the second day and all of the third day. The subjects of the written examination are (1) theory and practice of plastic surgery, (2) applied anatomy, applied physiology, (3) pathology, bacteriology, clinical laboratory methods (pharmacology), (4) reaction of tissue to injury, surgical accidents, anesthesia. A general oral examination pertaining to plastic surgery will be given. In the practical part of the examination, the examiner will present a group of patients for examination by the candidates, and the candidates will be quizzed on methods of procedure—diagnosis, treatment, technique, and so on. Slides of preoperative conditions will be shown on a screen and the candidate asked to make a quick diagnosis of the items and to tabulate in the order of their importance the methods of treatment. Microscopic slides of the average pathological tissue falling within the province of the plastic surgeon will be given the candidates, and they will be asked to write a description and diagnosis.

GRADES

To be considered as passing, the candidate will be required to receive a grade of at least 65% in each portion of the written examination and an average grade of 75% on the entire written and oral examination.

CERTIFICATION

After a candidate has met the requirements for eligibility and passed the examinations of the board, a certificate attesting his qualifications in plastic surgery will be issued to him by the board, signed by its officers and having the seal of the board affixed thereto. It shall be the prerogative of the board to determine the fitness professionally and ethically of any candidate for its certificate, and the action or decision of the board regarding the certification of any candidate shall be final.

FEES

The fee for application and examination is \$150. Of this sum, \$25 must accompany the application, and the remaining \$125 must be paid when the candidate is notified of acceptance for examination. There will be no refunds. This fee may be increased at the discretion of the board. The board is a nonprofit organization, and the fees of candidates are used solely for defraying the actual expenses of the board. The members of the board serve without remuneration. Because of the limited number of surgeons certified by this board it is necessary for a limited time to request a voluntary annual contribution of \$10 from diplomates after the first year's certification to help defray expenses.

**THE AMERICAN BOARD
OF PREVENTIVE MEDICINE, INC.**

ERNEST L. STEBBINS, Chairman, Baltimore
V. A. VAN VOLKENBURGH, Vice-chairman for Public Health, Albany, N. Y.
OTIS O. BENSON JR., Vice-chairman for Aviation Medicine, Randolph Air Force Base, Tex.
ROBERT A. KEHOE, Vice-chairman for Occupational Medicine, Cincinnati
GAYLORD W. ANDERSON, Minneapolis
J. H. BAILLIE, Toronto
LEROY E. BURNLEY, Washington, D. C.
ORAN W. CHENAULT, Washington, D. C.
JAN H. TILLISCH, Rochester, Minn.
A. G. KAMMER, Pittsburgh
JAMES H. STERNER, Rochester, N. Y.
TOM F. WHAYNE, Secretary-Treasurer, 615 N. Wolfe St., Baltimore 5, Md.

ELIGIBILITY REQUIREMENTS FOR EXAMINATION

Each applicant for a Certificate in Public Health, Aviation Medicine, or Occupational Medicine is required to meet certain eligibility requirements and to pass an examination. Such eligibility requirements are set forth in the by-laws of the Board. For the information of applicants such requirements are briefly outlined below; but for a full statement thereof reference must be made to the by-laws, as from time to time in force, by which alone such requirements are governed:

GENERAL REQUIREMENTS

1. Good moral character and high ethical and professional standing;
2. Graduation from a medical school in the United States or Canada approved by the Council on Medical Education and Hospitals of the American Medical Association, or from a foreign school satisfactory to the Board;
3. A hospital internship of at least one year approved by the Council on Medical Education and Hospitals of the American Medical Association, or a foreign hospital internship satisfactory to the Board; and
4. Authority to practice medicine in a State, territory, commonwealth or possession of the United States or in a Province of Canada.

SPECIAL REQUIREMENTS IN PUBLIC HEALTH

1. Successful completion (after internship) of at least one academic year of graduate study leading to the degree of Master of Public Health or an equivalent degree or diploma in a school of public health accredited for the purpose of such graduate study by the American Public Health Association; or training or study deemed by the Board to be substantially equivalent to such graduate study;

2. Residency (after internship) of at least two years of field experience in general public health practice, which included planned instruction, observation, and active participation in a comprehensive, organized, public health program approved* by the Residency Review Committee for Preventive Medicine of the American Medical Association's Council on Medical Education and Hospitals and the Board; or an equivalent Canadian residency approved by the Board; one year of such period in both instances may be an approved clinical residency in a field directly related to public health;

3. A period (after internship) of not less than three years, in addition to 1 and 2 above, of special training in or teaching or practice of public health;

4. Three years of the experience outlined in 2 and 3 above must have been obtained within the five-year period immediately prior to application for certification; and

5. Limitation of practice to full-time teaching or practice of public health as a specialty.

SPECIAL REQUIREMENTS IN AVIATION MEDICINE

1. Successful completion (after internship) of at least two academic years of graduate study in preventive medicine and aviation medicine, one year of which graduate study shall be in a school of public health accredited for the purpose of such graduate study by the American Public Health Association and one year of which shall be in a school of aviation medicine accredited for the purpose of such graduate study by the Council on Medical Education and Hospitals of the American Medical Association; or training or study deemed by the Board to be substantially equivalent to such graduate study;

2. Residency (after internship) of at least one year of supervised experience in aviation medical practice, which included planned instruction, observation, and active participation in a comprehensive, organized program of aviation medicine;

3. Supervised practice of aviation medicine (after internship) of not less than one year, in addition to 1 and 2 above, of special training in or teaching or practice of aviation medicine;

4. A period (after internship) of not less than two years, in addition to 1, 2, and 3 above, of special training in or teaching, research, or practice of aviation medicine;

5. Three years of the experience outlined in 2, 3, and 4 above, must have been obtained within the five-year period immediately prior to application for certification; and

6. Limitation of practice to full-time teaching, research, or practice of aviation medicine.

SPECIAL REQUIREMENTS IN OCCUPATIONAL MEDICINE

1. Successful completion (after internship) of at least two academic years of graduate study in preventive and occupational medicine in a school of medicine, a university graduate school, a school of public health, or a combination of these schools, all of which must be accredited for such graduate study by the Council on Medical Education and Hospitals of the American Medical Association; or training or study deemed by the Board to be substantially equivalent to such graduate study.

2. Completion (after internship) of not less than one year, in addition to 1 above, of supervised experience in occupational medical practice in an industrial or medical organization, which shall have provided planned instruction, observation and active participation in a comprehensive program of occupational medicine; or a period of experience deemed by the Board to be substantially equivalent to such year of supervised experience;

3. A period (after internship) of not less than three years, in addition to 1 and 2 above, of special training in or teaching or practice of occupational medicine;

4. Three years of the experience outlined in 2 and 3 above must have been obtained within the five-year period immediately prior to application for certification; and

5. Limitation of practice to full-time teaching, research or practice of occupational medicine.

APPLICATIONS FOR EXAMINATION AND REEXAMINATION

Each application for examination must be made on the prescribed form (which may be obtained from the Secretary of the American Board of Preventive Medicine), and must be filed with the Secretary, ordinarily not less than 90 days prior to the date of examination. It must be accompanied by the required documentation, application fee, and two recent, clear, unmounted, autographed photographs of the applicant, one of which should be attached to the application and the other unattached.

No member of the Board is authorized to give an opinion as to the eligibility of candidates. The determination of eligibility will be made only by the Board, after receiving full application information. Each candidate must comply with Board regulations in effect at the time the examination is taken and also those in effect at the time the certificate (if any) is issued, regardless of when his original application was filed.

An applicant declared ineligible for admission to examination may refile or reopen his application on the basis of new or additional information within two years of the filing date of his original application, without payment of an additional application fee.

An applicant declared eligible for admission to examination but who fails to submit to examination within three years of the date of the filing of his application is required to file a new application and to pay a new application fee.

Candidates failing the examination may, upon timely application and payment of appropriate fee, be admitted to reexamination within a specified period.

Candidates failing three examinations will not be admitted to subsequent examinations unless the Board so directs.

MULTIPLE CERTIFICATION

A person who has been certified in one affiliated specialty may apply for certification in another affiliated specialty; however, the applicant must meet in full the special requirements for each of the affiliated specialties in which he desires to be examined.

In determining whether the applicant meets such requirements, no period of training or experience, other than graduate study, will be taken into account if the same period shall have been taken into account in determining his eligibility for another affiliated specialty.

FEEES

(Applies to candidates making application subsequent to June 30, 1959, and; in the case of examination fees, to examinations taken subsequent to that date.)

The application fee is \$25. It must be submitted with application and is not refundable.

The examination fee is \$100. It is payable when applicant is notified of acceptance for examination; if paid prior thereto, it is not refundable after such notification has been given.

No additional fee is payable for the issuance of a certificate.

Re-examination fees are: each part taken, \$25; examination fees, additional affiliated specialty, each \$50.

*Applies to residencies undertaken on and after July 1, 1959.

EXAMINATIONS

Examinations will be held from time to time and in various places depending upon need as indicated by applications received. Examinations in some instances will be held in connection with the annual meetings of the nominating organizations and also may be held at other times and at other places so located geographically as to minimize travel for the applicants.

The written examination consists of two parts:

Part one is a comprehensive written examination designed to test the knowledge of the applicant in the basic principles of preventive medicine. Part two is a comprehensive written examination designed to test the knowledge of the applicant in the special field in which he requests certification.

An oral or practical examination is also required, which usually will be held at the completion of the written examination. An endeavor will be made to adapt the details of the oral or practical examination to each candidate's experience and practice.

Candidates for certification in a second or third affiliated specialty will be required to pass only that portion of the written examination relating specifically to such field.

The examiners will report upon each candidate to the assembled Board, by which the result of the examination will be considered.

AMERICAN BOARD OF PROCTOLOGY

H. R. REICHMAN, President, Salt Lake City
 A. W. MARTIN MARINO, President Elect, Brooklyn, N. Y.
 ROBERT J. ROWE, Vice President, Dallas, Texas
 HARRY E. BACON, Philadelphia
 FREDERICK B. CAMPBELL, Kansas City, Mo.
 WALTER A. FANSLER, Minneapolis
 CLIFFORD E. HARDWICK, Portland, Ore.
 M. O. HINES, New Orleans
 R. A. SCARBOROUGH, San Francisco
 STUART T. ROSS, Secretary, 520 Franklin Avenue, Garden City, N. Y.

QUALIFICATIONS AND REQUIREMENTS

General

All candidates shall comply with the following regulations:

1. A candidate shall possess moral, ethical, and professional qualifications acceptable to the Board.
2. He shall possess full citizenship in the country in which he practices.
3. He shall limit his practice to proctology, shall appear personally before the Board, and shall submit to the required examinations.
4. He shall deliver to the Board upon request an official record of patients hospitalized by him during the year prior to the date of submission of the application.
5. He shall submit a bibliography of papers and books published by him.

PROFESSIONAL QUALIFICATIONS

1. He shall be a graduate of a medical school approved by the Council on Medical Education and Hospitals of the American Medical Association.
2. He shall possess a license to practice medicine in the country of his residence.
3. He shall have completed an internship, preferably of the general rotating type, of not less than 12 months in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association.

SPECIAL PROFESSIONAL QUALIFICATIONS

1. He shall have completed a minimum of three years of an approved general surgical residency and one of the following:

- a. Two years of a proctologic residency approved by the Board; or
- b. Two years of a proctologic preceptorship approved by the Board.

2. Applicants who present evidence of exceptional training and experience in colonic and rectal surgery during their three years of training in general surgery may, upon special application and approval by the Board, be accepted for examination following one year of approved training in Proctology.

APPLICATIONS

Each candidate for examination shall submit an application prepared upon the prescribed form which may be obtained from the Secretary of the Board. It shall contain a record of the candidate's premedical and medical training, internships, residencies, preceptorships, other postgraduate study, hospital and dispensary appointments, teaching positions, service in the armed forces, service in federal, state or local government, membership in medical societies, and any additional information considered valuable by the Board.

The application shall be signed by two proctologists. It shall be accompanied by two unmounted autographed recent photographs of the candidate, letters of endorsement from appropriate sources and the application fee. It shall be filed with the Secretary not less than 90 days prior to the date of examination.

EXAMINATIONS

Examinations are conducted at times and places determined by the Board and are announced in THE JOURNAL of the American Medical Association.

Seventy-five per cent is the passing grade on all examinations.

Examination papers are identified only by numbers and the examiners do not know the identity of the examinees.

Part 1: This consists of a comprehensive written examination in the basic sciences, including anatomy, physiology, pathology, bacteriology, and biochemistry. The examination is held in the fall of the simultaneously in several cities of the United States.

Upon approval of the American Board of Proctology, candidates who have passed part 1 examinations of the American Board of Surgery and who have completed required training in proctology may not be required to take part 1 of the examinations of the American Board of Proctology.

Part 2: This is a practical examination which is held in the community in which the candidate conducts his professional activities. (It may be omitted at the discretion of the Board, in which case the candidate will be notified by the Secretary.) It is endeavored to arrange the examination at a time suitable to both the candidate and the examiner. The examination includes inspection of:

1. Surgical operations.
2. Hospital rounds.
3. Hospital and office records.
4. Office practice.

Part 3: This consists of comprehensive written and oral examinations on the theory and practice of proctology and includes roentgenologic interpretation. The examination is usually held in the fall of the year in one designated city of the United States. The candidate is not admitted to part 3 examinations until he has completed the requirements of part 2.

The oral portion of the examination is conducted by members of the Board or its designated examiners. An attempt is made to ascertain the candidate's knowledge of current proctologic literature, his knowledge of the basic sciences, and the extent of his clinical experience and other qualifications.

FEEES

Application fee: A fee of \$25.00 shall accompany the application.

Examination fee: A fee of \$150.00 is due and payable when the candidate is notified that he has been approved for examination.

No fee shall be returned to the candidate without Board approval.

All fees shall be made payable to the American Board of Proctology and shall be sent to the secretary.

AMERICAN BOARD OF PSYCHIATRY AND NEUROLOGY

RUSSELL N. DEJONG, President, Ann Arbor, Mich.
PAUL I. YAKOVLEV, Vice-president, Boston, Mass.
HARVEY BARTLE JR., Philadelphia
C. H. HARDIN BRANCH, Salt Lake City
HENRY W. BROSON, Pittsburgh
HUGH T. CARMICHAEL, Chicago
L. M. EATON, Rochester, Minn.
KNOX H. FINLEY, San Francisco
FRANCIS M. FORSTER, Washington, D. C.
FRANCIS J. GERTY, Chicago
WILLIAM MALAMUD, Boston
DAVID A. BOYD JR., Secretary-Treasurer, 102 Second Ave.,
S. W., Rochester, Minn.

APPLICATION FOR CERTIFICATION

An application, in order to be considered at any meeting of the Board, must be in the hands of the Secretary of the Board not less than 90 days before the date of such meeting. A proper application form may be obtained from the Secretary. Application may be made for certification in psychiatry or in neurology or in both fields. Applications will be formally considered only when made on the official application blank in such form as may be adopted from time to time by the Board and when accompanied by an application fee in such amount as may be fixed by the Board.

The Secretary of the Board, upon receipt of an application, shall forthwith make inquiries from those to whom the candidate refers and from such other persons as the Secretary may deem desirable and shall verify the candidate's record from the biographical records of the American Medical Association, after which he shall forward the application to the Committee on Credentials. This Committee shall consider the application and other information available and notify the Secretary whether the application is accepted. The certification of a candidate in either psychiatry or neurology, or both, shall be approved by a majority of the members of the entire Board at any meeting held for such certification.

FORM OF CERTIFICATION

There shall be separate certification in psychiatry and in neurology and two certifications or a combined certification for those qualified in both fields. The certification shall be in such form as is approved by the Board of Directors.

General Requirements for Applicants. Each application for a certificate must establish that:

(a) He is a physician duly licensed by law to practice medicine.

(b) He is of acceptable ethical and professional standing.

(c) He is now a member of the American Medical Association. Exceptions to the foregoing may be made at the discretion of the Board for good and sufficient reasons.

(d) He has satisfactorily completed adequate training in psychiatry or neurology, or both, as a specialty.

CLASSES OF APPLICANTS

Class A

Applicants who graduated from an approved medical school before the foundation of the Board (1934) will not be held to the strict interpretation of the published requirements in formal graduate training. Under such circumstances the Board will consider the training and experience of the applicant and decide whether or not he will be admitted to the examinations. For such graduates the Board will consider 10 years of full-time acceptable experience in psychiatry or neurology in lieu of the formal training requirements. Should the candidate then apply for supplementary certification, the Credentials Committee will require five years of additional acceptable experience in the supplementary field.

Class B

Applicants who graduated from an approved medical school after 1934 shall fulfill the following special requirements.

PROFESSIONAL EDUCATION

1. Graduation from a medical school in the United States or Canada approved by the Council on Medical Education and Hospitals of the American Medical Association. In the case of an applicant whose medical training has been received outside the United States and Canada, such training must be satisfactory to the aforementioned Council.

2. Satisfactory completion of a year's internship approved by the same Council on general medicine, general surgery, pediatrics, or a rotating service.

3. The nine-month wartime internships will be accepted as an equivalent of one year.

SPECIALIZED TRAINING

Admission to the examination for certification in psychiatry or in neurology requires a total of five calendar years of training and experience, three years of which must be specialized training satisfactorily completed in approved training centers, plus two years of experience.

Admission to the examination for certification in both psychiatry and neurology requires a total of six calendar years of training and experience, five years of which must be specialized training satisfactorily completed in approved training centers, plus one year of experience. The specialized training may be subdivided into two and one-half years each in psychiatry and neurology or three years in one subject and two years in the other. The required years of experience should be spent in clinical practice with major responsibility for the care of patients.

All applicants who wish to qualify for examination for certification in psychiatry or neurology under the regulations relating to training credit and who began training on or after July 1, 1956, must show that at least 24 months of their residency training have been secured in residency training programs approved for at least two years of residency training in the specialty in which they seek certification.

The training for psychiatrists should include clinical work with psychoneurotic and psychotic patients, combined with the study of basic psychiatric sciences, medical and social psychology, psychopathology, psychotherapy, and the physiological therapies, including a basic knowledge of the form, function, and pertinent pathology of the nervous system. The training should be supervised and guided by teachers competent to develop skill and understanding in the utilization of such basic knowledge in dealing with patients. Mere factual knowledge is not sufficient. This training period should include instruction in the psychiatric aspects of general medical and surgical conditions and the behavior disorders of children and adolescents sufficient to develop practical ability to direct the treatment of such conditions. It should also include collaborative work with social workers, clinical psychologists, courts, and other social agencies. The training program of the candidate for certification in psychiatry should include sufficient training in neurology to enable him to recognize and to evaluate the evidences of organic neurological disease.

The training for neurologists should be based on clinical work with adults and children with neurological disorders, including the neurological complications of medical and surgical conditions. This should be combined with study of the basic neurological sciences, neuroanatomy, neurophysiology, neuropathology, and neurooentgenology. This training should be supervised and guided by teachers competent to develop skill and understanding in the utilization of such basic knowledge in dealing with patients. Mere factual knowledge is not sufficient. This training should include sufficient training in psychiatry to enable the candidate to recognize and evaluate the common psychiatric reactions.

The Board offers the foregoing two paragraphs as an outline of desirable training. If, however, the candidate has evidence of equivalent qualifications of training and experience not in the pattern here formulated, this evidence with appropriate documentary support may be included in his application for evaluation and possible approval by the Board.

Candidates seeking certification in both neurology and psychiatry, or supplementary certification in one after being certified in the other, must submit evidence satisfactory to the Board of an additional two years of full-time basic training in the supplementary specialty.

Thus, no candidate is eligible for examination by the Board until he has completed at least five years of special training and experience in neurology or in psychiatry for a single certificate, or at least six years of special training and experience in neurology and psychiatry for certification in both neurology and psychiatry.

The Board will give not more than six months of credit for not less than six months of training in an approved training center for Internal Medicine or Pediatrics in lieu of six months of experience to candidates for the certificate in psychiatry or neurology but not to candidates for certification in both psychiatry and neurology.

The Board will give credit for one year of training in Child Psychiatry providing it is the third year of the required three years of special training required by the Board and providing it is taken in a center approved by this Board for training in child psychiatry. After July 1, 1956, training credit for work in the field of child psychiatry may be gained only by participation in a hospital residency training program that is regularly approved. After that date, all independent training approval of psychiatric clinics for children is discontinued.

The lists of training programs approved by this Board and by the Council on Medical Education and Hospitals of the American Medical Association may be found in the current issues of the Educational Number of the Journal of the American Medical Association.

TRAINING IN THE ARMED FORCES

Training and experience credit toward requirements for examination will be granted for military duty in the Korean emergency under certain conditions. This policy relates to active military medic duty since July 1, 1950. One year of training credit will be granted for one year spent in full-time psychiatric and/or neurologic duties. Additional training credit will be granted for that amount of time spent in approved training programs. Experience credit will be granted for any remaining time spent in full-time psychiatric and/or neurologic assignments. Double credit will not be granted for any single period of time.

For military duty after January 1, 1954, only experience credit will be granted for full-time psychiatric and/or neurologic duties. Training credit will be granted for residency assignments in regularly approved training programs.

Training credit for full-time psychiatric and/or neurologic assignments in unapproved military programs or services between the dates of January 1, 1950 and January 1, 1954, will be terminated as of January 1, 1959.

EXAMINATIONS

Dates and places of examinations shall be set by the Board at its discretion and shall be announced in *THE JOURNAL of the American Medical Association*, in the *American Journal of Psychiatry*, in the *Journal of Nervous and Mental Diseases*, and in the *Archives of Neurology and Psychiatry*.

Though the purpose of the examination is to test the competence of the candidate in psychiatry or neurology or both, it must not be forgotten that both these medical disciplines constitute part of the broad field of general medicine. The Board requires some proficiency in neurology on the part of those it certifies in psychiatry, and vice versa, but it examines the candidate in accordance with the certificate he seeks. The examinations will be of such type that no adequately trained person will fail, and yet they will be sufficiently searching so that the specialist in fact may be separated from the specialist in name. The practical examination will include the examination of patients under the supervision of the examiner. The manner of examining patients, and the reasoning and deductions therefrom, will constitute an important part of the examination. Oral and practical examinations will be given in the basic sciences with special regard to their clinical implications. Written examinations may be given at the discretion of the Board. The examination for certification in psychiatry will differ from the examination for certification in neurology.

PAYMENT OF FEES

The candidate, upon filing his application, shall accompany it with an application fee of \$50.00, which is not returnable. If a preliminary written examination has been decreed, an additional \$25.00 fee will be required at the time of the applicant's acceptance. When notified by the Secretary that he is accepted for the oral and practical examination, the candidate shall send to the Secretary an examination fee of \$75.00. A candidate who has been certified in either psychiatry or neurology and who has been admitted to supplementary examination for the other certificate shall pay an additional examination fee of \$75.00.

A candidate who has failed in one examination is eligible for reexamination within one year upon payment of a reexamination fee of \$75.00. After the year has elapsed, he must submit a new application and pay new application and examination fees. If he fails the reexamination, he may, after two years have elapsed, submit a new application and \$50.00, present evidence of further training, and pay an examination fee of \$75.00.

A candidate who fails in one or two subjects is eligible for reexamination in those subjects within one year upon payment of a reexamination fee of \$50.00. After the year has elapsed he must submit a new application and pay new application and examination fees and repeat the entire examination. If he fails the reexamination, he may apply again for the complete examination after two years upon submission of evidence of further training and upon payment of an application fee of \$50.00. If admitted to the examination, he must pay a new examination fee of \$75.00.

Any candidate who finds himself unable to attend an examination to which he has been admitted and does not notify the Secretary at least three months before the date of the examination will forfeit his examination fee. Any candidate who fails to appear for examination within a period of three years following the date of notification of eligibility for examination shall be required to submit a new application and pay the attendant fee. If a candidate dies before his certificate is issued, all fees will be returned to his estate.

Beginning January 1, 1958, all unused examination fees or portions of examination fees on deposit in the Board Office will be forfeited by the candidate to the Board when the application lapses by going out of date. Further, all unused examination fees, or partial, unused examination fees, deposited before the date of January 1, 1952, will automatically be forfeited by the candidate to the Board on January 1, 1958.

AMERICAN BOARD OF RADIOLOGY

BERNARD P. WIDMANN, President, Philadelphia, Pa.
 LAURENCE L. ROBBINS, Vice-President, Boston, Mass.
 JAMES W. J. CARPENDER, Treasurer, Chicago
 ROBERT BARDEN, Philadelphia, Pa.
 JOHN D. CAMP, Los Angeles
 DONALD S. CHILDS, Syracuse, N. Y.
 C. ALLEN GOOD, Rochester, Minn.
 E. L. JENKINSON, Chicago
 TRAIAN LEUCUTIA, Detroit
 LESTER PAUL, Madison, Wis.
 F. W. O'BRIEN, Boston
 DOUGLAS QUICK, New York
 LEO G. RICLER, Los Angeles
 ERNEST H. WOOD, Chapel Hill, N. C.
 H. DABNEY KERR, Secretary, Kahler Hotel Bldg., Rochester, Minn.

CERTIFICATES

A certificate granted by this board does not of itself confer, or purport to confer, any degree, or legal qualifications, privileges, or license to practice radiology. Certificates of the board shall be issued in one of three categories:

1. *Radiology*: that branch of medicine which deals with the diagnostic and therapeutic application of radiant energy including roentgen rays, radium and radioisotopes.

2. *Diagnostic Roentgenology*: that branch of radiology which deals with the diagnostic application of roentgen rays.

3. *Therapeutic Radiology*: that branch of radiology which deals with the therapeutic application of roentgen rays, radium and radioactive isotopes.

4. *Radiological Physics*: that branch of physics which deals with the medical application of roentgen rays, gamma rays, radioisotopes, nuclear reactions, and particle accelerators.

5. *Roentgen-ray and Gamma-ray Physics*: that branch of radiological physics which deals with roentgen rays and gamma rays.

6. *Medical Nuclear Physics*: that branch of radiological physics which deals with radioisotopes, nuclear reactions and particle accelerators.

GENERAL REQUIREMENTS AND QUALIFICATIONS

Each applicant shall be required to present evidence that he has met the following standards:

1. Satisfactory moral and ethical standing in the profession.

2. A license to practice medicine in the state or county in which he resides.

3. Holds himself out to be a specialist in radiology or one of its branches as defined and devoted his time to the practice of radiology or one of its branches.

4. He is a citizen of the United States or Canada. A candidate from another country must be a permanent resident of that country and a citizen thereof.

PROFESSIONAL EDUCATION

1. Graduation from a medical school recognized by the Council on Medical Education and Hospitals of the American Medical Association.

2. Completion of an internship of not less than one year in a hospital approved by the same Council. After completion of the internship, there shall be a period of special training (length of time as indicated below) in an approved department of radiology.

Radiology: Those beginning their training before July 1, 1956, must have three years formal residency training in an approved department of radiology.

Those beginning their training on July 1, 1956, or thereafter must have three years formal residency training in an approved department of radiology plus an additional year of either further training or practice. The three-year training period must include the equivalent of six months (total) in pathology and isotopes.

Diagnostic Roentgenology: Those beginning their training before July 1, 1956, must have two and one-half years formal residency training in an approved department of radiology. The equivalent of six months of this time must have been devoted to Pathology.

Those beginning their training on July 1, 1956, must have two and one-half years formal residency training in an approved department of radiology (the equivalent of six months of which time must have been devoted to pathology) plus an additional year of either further training or practice.

Those beginning their training on July 1, 1957, or thereafter will be required to take three years formal residency training in an approved department of radiology—the first year of which must be spent in basic training (pathology, physics, and basic radiological techniques) followed by two years clinical training.

Therapeutic Radiology: Those beginning their training before July 1, 1956, must have two and one-half years formal residency training in an approved department of radiology. The equivalent of six months of this time must have been devoted to Pathology.

Those beginning their training on July 1, 1956, must have two and one-half years formal residency training in an approved department of radiology (the equivalent of six months of which time must have been devoted to pathology) plus an additional year of either further training or practice.

Those beginning their training on July 1, 1957 or thereafter will be required to take three years formal residency training in an approved department of radiology—the first year of which must be spent in basic training (pathology, physics, physics of isotopes, and basic radiologic techniques) followed by two years clinical training. They will also be required to take an additional year of either further training or practice.

Those applying for therapeutic radiology alone must show evidence of personal experience in the use of intracavitary and interstitial radium or equivalent sources, as well as proficiency in roentgen therapy.

Prior to July 1, 1960, those candidates desiring to be certified in either radiology or therapeutic radiology will be urged to take an examination in nuclear medicine.

Those candidates previously certified in roentgenology desiring to complete their certificates in radiology (including nuclear medicine) will be required to have the equivalent of six months full-time radium and isotope training in an approved department of radiology.

Prior to July 1, 1960, those candidates who have been previously certified in roentgenology and who do not desire to be examined in nuclear medicine must have the equivalent of three months full time radium training in an approved department of radiology.

EXAMINATIONS

Usually two examinations are held each year. At present, examinations are practical and oral. The examinations are designed to test the candidate's fitness to practice radiology or one of its branches as a specialty.

The examination consists of tests in film interpretation and an oral examination in pathology, physiology, radiophysics, and radiobiology, as well as the clinical application of roentgen rays, radium, and radioactive isotopes. The applicant is also examined in "professional adaptability," in an attempt to ascertain his attitude toward his fellow practitioners and his patients.

AMERICAN BOARD OF SURGERY

FRANK GLENN, Chairman, New York
 WILLIAM A. ALTEMEIER, Vice-chairman, Cincinnati
 CLETUS W. SCHWEGMAN, Associate Secretary, Philadelphia
 JOHN J. MCKEOWN JR., Assistant Secretary, Philadelphia
 FRANK F. ALBRITTEN JR., Kansas City, Kan.
 J. GARROTT ALLEN, Chicago
 JOEL W. BAKER, Seattle
 HOWARD H. BRADSHAW, Winston-Salem, N. C.
 OLIVER COPE, Boston
 MICHAEL E. DE BAKEY, Houston, Texas
 J. ENGLEBERT DUNPHY, Boston
 WILLIAM P. LONGMIRE JR., Los Angeles
 CARLETON MATHEWSON JR., San Francisco
 K. ALVIN MERENDINO, Seattle
 H. WILLIAM SCOTT JR., Nashville, Tenn.
 HARRIS B. SHUMACKER JR., Indianapolis
 WILLIAM H. SNYDER JR., Los Angeles
 HENRY SWAN, Denver
 ROBERT M. ZOLLINGER, Columbus, Ohio
 JOHN B. FLICK, Secretary-Treasurer, 1617 Pennsylvania Blvd., Philadelphia 3.

GENERAL QUALIFICATIONS

An ethical standing in the profession and a moral status in the community which are satisfactory to the Board.

Engagement in the practice of surgery.

PRELIMINARY TRAINING

Graduation from an approved medical school in the United States or Canada or from medical schools acceptable to the Board in other countries.

Completion of an internship (straight or rotating) of not less than one year in a hospital approved by the Council on Medical Education and Hospitals of the A. M. A. or its equivalent in the opinion of the Board.

SPECIAL TRAINING

The American Board of Surgery is guided by the evaluation of residency training programs made by the Conference Committee on Graduate Training in Surgery and does not itself conduct such surveys.

The Board interprets the term general surgery in a comprehensive manner and expects candidates to have knowledge of the basic principles applied in the treatment of fractures, head injuries, or other forms of trauma, and of the more common procedures in plastic, gynecologic, orthopedic, neurologic, thoracic, and urologic surgery.

Basic Sciences

It is fundamental to the concept of an approved residency in general surgery that the program provide for properly organized, integrated, and progressively graded clinical training in this specialty. This presupposes a continuity of clinical experience under the supervision of the surgical staff of the hospital or hospitals in which such training is conducted. Accordingly, while recognizing the value of formal courses in the study of surgery and the basic sciences at approved graduate schools of medicine, the Board will not accept these courses as part of a three or four-year residency program in lieu of clinical experience. Furthermore, the integration of basic sciences, particularly pathology, with clinical training is considered superior to formal courses in these subjects.

Senior Year

The most important single factor in the development of a surgeon is the opportunity under guidance and supervision to grow by progressive and succeeding stages to the stature of complete responsibility for the surgical care of patients. Major operative experience and senior responsibility are an essential part of surgical education and training. For this reason the Board cannot accept for examination candidates who have not had such experience in general surgery, regardless of the number of years in training.

Since a majority of residency training programs do not provide a sufficient accretion of operative experience and personal responsibility until the completion of the senior or final year, the Board requires that the candidate have had this senior year in order to become eligible for examination. Because it is recognized that some flexibility and well-considered experimentation are essential to progress in surgical, as well as other forms of education, the Examination Committee of the Board is prepared to give individual consideration to applicants whose training in general appears adequate although it may not meet all of the following specified requirements.

TYPES OF PROGRAMS

The requirements for examination may be fulfilled by either of two programs. These are considered to be minimal in attaining the purposes of the Board and do not preclude additional desirable educational experiences which may strengthen the individual residency training program.

The Board may, at its discretion, require that a member of the Board, or other designated diplomate, observe and report upon the clinical performance of the candidate before considering his eligibility for examination or certification.

The Board reserves the right to require a candidate to submit a list of the operative procedures performed by him during his training period.

Group 1 Program

Completion of a graded residency in general surgery of at least four years duration, including the senior year, in an institution or institutions acceptable to the Board and ap-

proved for four years of training by the Conference Committee on Graduate Training in Surgery is required.

An approved four-year residency may include a research project or an assignment to a basic science department such as pathology, physiology, or anatomy, provided this is an integral part of the program. The program must include at least three years of clinical surgery.

The Board accepts training of not more than one year duration in "affiliate hospitals" as part of its basic formal educational requirements. Such "affiliate hospital" training must have been part of the graded residency program of an institution approved for four years by the Conference Committee. The senior year must have been spent in the parent institution holding the approval of the Conference Committee, except in those instances where the senior year in the "affiliate hospital" is, in the opinion of the Conference Committee, equivalent in training value to the senior year in the parent institution and is under the same supervision.

The candidate who completes only four years of an approved program designed for more than four years, and thus does not have the senior or final year of the residency, may submit his qualifications for special consideration by the Examination Committee. The Committee can recommend acceptance of the candidate for examination in group 1 or group 2, provided the evidence indicates the candidate has had adequate operative experience and clinical responsibility as certified by the Chief of Service.

Residency credit will be granted for surgical internship to a candidate who has completed a prior year of acceptable internship when the surgical internship is part of a graded program approved for four years by the Conference Committee.

Group 2 Program

Completion of a graded residency in general surgery of at least three years duration, including the senior year, in an institution or institutions acceptable to the Board and approved for at least three years of training by the Conference Committee on Graduate Training in Surgery is the basic requirement.

Residency credit will not be granted for separate periods of time devoted exclusively to research or a preclinical discipline although the day to day integration of these disciplines with clinical surgery is highly desirable. The program must have included three years of clinical surgery and the final year must have been spent in the capacity of senior or chief resident in general surgery.

Two additional years of training beyond the three years of residency to complete a total of five are necessary to meet the requirements for examination.

These may include:

(a) Practice of surgery under acceptable supervision (preceptorship). By "acceptable supervision" is meant an arrangement with a preceptor acceptable to the Board who should inform the Board in writing of his willingness to assume responsibility for the candidate's further training. Before the candidate's eligibility for examination can be considered, he will be required to submit to the Board a list of the operative procedures performed by him during the period of supervised practice, and the preceptor will be requested to vouch for the candidate's integrity, surgical judgment, and technical skill. The acceptance of supervised practice in fulfillment of part of the Board's requirements will be contingent upon the candidate's having had adequate clinical opportunities to fortify residency training and considerable responsibility in the care of patients, including the performance of major operative procedures under supervision.

(b) The study of surgery and the basic sciences in an approved graduate school of medicine on a full-time basis and for a consecutive period of not less than nine months, or one school year. Training credit in excess of 12 months will not be granted in this category.

If provision has been made to study a single basic science such as pathology, physiology, or anatomy, up to six months credit may be granted for such study.

Credit may be granted for a maximum of 12 months spent in full-time surgical research under a responsible investigator who is acceptable to the Board. A candidate may not claim credit for both graduate study and research years.

(c) Further acceptable surgical residency or fellowship training, either in general surgery or in a recognized surgical specialty.

N.B.: Credit as outlined above under (a), (b), and (c) will be applicable only toward the two years of training which group 2 candidates must complete in addition to three years of approved residency in general surgery. It will not be considered as basic residency credit.

MILITARY CREDIT

Credit not to exceed one year may be granted to those candidates who have served in military hospitals other than those approved for residency training, provided that the candidate has had a satisfactory surgical assignment with adequate and diversified clinical material and provided further that his work in surgery is carried out under the supervision of a surgeon acceptable to the Board. Any such credit will be considered preceptorship credit toward group 2 requirements and not basic residency credit.

LICENSE TO PRACTICE

The Board requires, prior to issuance of a certificate, that candidates have a valid license to practice medicine except in those situations in the United States or Canada in which a license to practice is not required, such as the practice of surgery by commissioned officers in the Army, Navy, or Public Health Services of these countries.

REQUIREMENTS FOR FOREIGN BORN AND FOREIGN TRAINED CANDIDATES

Such candidates must meet the same requirements as citizens of the United States or Canada. The Examination Committee, however, after individual evaluation, may grant credit for foreign training.

APPLICATIONS

Prospective candidates for examination by the Board should carefully read the Board's requirements as set forth in this Booklet of Information. If, after becoming familiar with the requirements, a candidate needs advice about his training, or believes he has completed the requirements, he should submit a brief chronological outline of his training, including precise dates, using the Evaluation Form which will be furnished on request.

Application for Examination forms are not forwarded until candidates are within several months of completing their training requirements and appear to have met all other requirements of the Board.

Applications should be returned by August 1 if consideration is desired for examination in part 1 in December of the same year. Those desiring such consideration are urged to apply several months before completing their training requirements to enable the Board's office to process as many applications as possible before the August 1 registration deadline.

Candidates completing their training requirements after September 30 must await consideration for admission to the December part 1 examination one year later.

The Board's acceptance of candidates for examination is based not only upon an evaluation of their training, but also upon information available to the Board concerning their professional ability as surgeons and their ethical standing.

Candidates are notified of their eligibility for the part 1 examination when their applications have been approved, and subsequently are sent a list of examination centers from which to choose. Candidates are not eligible for the part 2 examinations until they have made a passing grade in part 1.

EXAMINATION

The qualifying examination is divided into part 1 (written) and part 2 (oral). In both of these a knowledge of the practical application of the sciences fundamental to surgery is required.

PART 1

The examination is given simultaneously in as many centers throughout the United States as the Board may determine suitable for the purpose and sometimes by special arrangement in certain centers abroad. It is held once annually on the first Wednesday of December.

The part 1 examination is of the objective, multiple-choice type, and is administered during a half-day session. This examination is designed to cover general surgical problems including the application of the sciences basic to surgery. Questions are of various types and are based upon the analysis of case histories, cause and effect relationships, and other pertinent situations. The examinations are composed by members of the Board with the technical assistance of the Educational Testing Service.

PART 2

Examinations usually are held in ten different centers in the United States each year from September to June inclusive. These examinations are conducted by members of the Board and selected diplomates acting as guest examiners.

The part 2 examination is oral and practical and requires the candidate's presence for one day. Candidates are examined in clinical surgery, including diagnosis, management of patients, and the application of anatomy, pathology, physiology, biochemistry, and bacteriology to surgical problems. In pathology, emphasis is placed on an understanding of disease processes and their clinical implications. The identification of gross and microscopic lesions and the interpretation of roentgenograms also may be included.

FEEES

The fee for examination is \$175.00 payable as follows: \$25.00 for registration, \$75.00 for part 1 and \$75.00 for part 2.

The fee for reexamination in part 1 or in part 2 is \$75.00.

The Board is a nonprofit organization. All fees will be used, after a reasonable amount is set aside for necessary expenses, to aid in improving existing opportunities for the training of surgeons. The members of the Board, except the Secretary-Treasurer, serve without remuneration.

CERTIFICATION IN THORACIC SURGERY

Diplomates of the American Board of Surgery wishing to become certified in thoracic surgery are advised to communicate with the Secretary of the Board of Thoracic Surgery, Dr. William M. Tuttle, 1151 Taylor Ave., Detroit 2. This Board is an affiliate of the American Board of Surgery.

BOARD OF THORACIC SURGERY

(An affiliate of the American Board of Surgery)

JOHN C. JONES, Chairman, Los Angeles
O. THERON CLAGETT, Vice-chairman, Rochester, Minn.
JOSEPH W. GALE, Madison, Wis.
EDWARD M. KENT, Pittsburgh
HIRAM T. LANGSTON, Chicago
HERBERT C. MAIER, New York
PAUL C. SAMSON, Oakland, Calif.
ROBERT R. SHAW, Dallas, Texas
JOHN W. STRIEDER, Boston
ROBERT H. WYLLIE, New York
WM. M. TUTTLE, Secretary and Treasurer, 1151 Taylor Ave., Detroit 2.

REQUIREMENTS FOR EXAMINATION

1. Certification by the American Board of Surgery.
2. Two years training in thoracic surgery approved by the Board of Thoracic Surgery, or meritorious contributions to thoracic surgery. One of these two years may be spent during the four years of training in surgery required by the American Board of Surgery.

3. Written and oral examination.

Definition of what is considered acceptable training in Thoracic Surgery.—To qualify for the examination in thoracic surgery, the candidate shall have had two years of training in an active, well-integrated thoracic surgical clinic or clinics, or the equivalent amount of thoracic surgical training, on a mixed service consisting of thoracic and non-thoracic surgical cases. Adequate training in both the tuberculous and nontuberculous aspects of thoracic surgery is expected. In order to obtain this objective, combined residencies between institutions of different types may be advantageous. It is also required that the candidate be familiar with the basic sciences as related to thoracic surgery. Under exceptional circumstances certain surgeons may, by virtue of recognized proficiency in the surgical treatment of thoracic diseases, qualify for the examination at the discretion of the Board.

APPLICATIONS

Prospective candidates desiring to apply for examination should consider whether they are able to meet the minimum requirements of the Board. They should then submit a letter to the secretary's office, outlining briefly their training and experience in thoracic surgery and ask for an application form. An application form will not be sent unless evidence is submitted in the letter indicating that the prospective applicant appears to meet the minimum requirements.

EXAMINATIONS

The qualifying examinations are divided into two parts. Part 1 is written, and part 2 is an oral examination in clinical surgery, x-ray interpretation, and pathology.

Part 1.—This examination will be given simultaneously at least once a year in as many centers throughout the country as the Board may determine suitable for this purpose.

Part 2.—In order to be eligible for part 2 a candidate must have successfully completed part 1. Examinations in part 2 are conducted in certain centers of the country selected by the Board.

Candidates examined by the American Board of Surgery in part 1 (written examination) on or after October 26, 1955, who are certified by the American Board of Surgery, will be required to take only the oral examination given by the Board of Thoracic Surgery.

Candidates examined by the American Board of Surgery in part 1 prior to October 26, 1955 will be required to take part 1 (written examination) of the Board of Thoracic Surgery before taking its oral examination.

REEXAMINATIONS

Those individuals who fail part 1 or part 2 will be required to wait one year before they can retake the part which they failed. Those who fail twice will be required to wait for a period of two years. Candidates who are unsuccessful at three attempts will be required to wait three years before requesting reconsideration. The Board may at its discretion deny the candidate the privilege of reexamination.

Candidates declared eligible but who fail to exercise the examination privilege within three years of the date of filing the application will be required to file a new and current application and pay a new examination fee. Also a candidate who has failed in an examination (part 1 or part 2) and who does not apply for reexamination within three years shall be required to make a new application and pay a new examination fee.

FEES

For the special examination in thoracic surgery and the issuing of a certificate the fee will be \$100.00. Fifteen dollars of this fee is to accompany the application and will be considered as a registration fee. It is nonreturnable to the applicant in case he is disapproved for examination.

The fee for reexamination will be \$50.00.

AMERICAN BOARD OF UROLOGY

EDGAR BURNS, President, New Orleans
 GRAYSON CARROLL, Vice-president, St. Louis
 THOMAS D. MOORE, Memphis, Tenn.
 RUBIN H. FLOCKS, Iowa City
 DONALD A. CHARNOCK, Los Angeles
 WILLIAM P. HERBST, Washington, D. C.
 FRANK C. HAMM, Brooklyn, New York
 WYLAND F. LEADBETTER, Boston
 WILLIAM NILES WISHARD JR., Secretary-Treasurer, 30 Westwood Road, Minneapolis 26.
 MRS. RUBY L. GRIGGS, Executive-secretary, 30 Westwood Rd., Minneapolis 26.

REQUIREMENTS

A. Application for certification must be made on a special form. This will be provided by the secretary and must be returned to him accompanied by other required data and credentials and by \$50 of the examination fee.

B. The applicant must have graduated from a medical school of the United States or Canada recognized by the Council on Medical Education and Hospitals of the American Medical Association and must have completed an internship of not less than one year in a hospital approved by the same council.

Requirements of graduates of foreign medical schools shall conform to and be similar to the requirements as demanded of the applicants for the accepted medical schools in the United States and Canada. Such applications will be considered by the full board on individual merits.

C. The applicant must establish in a manner satisfactory to this Board that he is a physician duly licensed by law to practice medicine and that he is of high ethical and professional standing.

D. The applicant must establish that he has received special graduate training as follows in this order:

1. An approved internship of at least one year.
2. One year in the basic sciences or clinical studies basic to urology, or one year residency in general surgery or internal medicine.
3. An approved graduated three-year residency in urology, leading to competency in all its phases.

E. Applicant must have an additional period of not less than two years in the practice of urology in the city of his office or place of practice.

F. The applicant must assure the Board that he is engaged in the full time practice of urology.

FEE

The examination fee is \$150. Fifty dollars must accompany the application. One hundred dollars must be paid when the application has been processed. Neither fee is returnable.

Applications for certification shall be examined by the credentials committee and reviewed by the board. When additional data are required to complete the application, these will be requested by the secretary.

REQUIREMENTS FOR CERTIFICATION

The requirements for certification include evidence of hospital practice including the presentation of report of 25 representative (not necessarily consecutive) major urologic cases from practice, which must contain all items essential for diagnosis, therapy, prognosis, results of treatment, etc; a written examination; and pathology and oral clinical examinations.

A. Evidences of Hospital Practice and Case Reports: An index, in consecutive order, of all major and minor urologic surgery (including endoscopy) done during the last two years of practice must be presented. This index must be verified by the various hospital administrators.

The candidate must present 25 records of major urologic cases completed since the candidate's residency training with hospitals, names, (or initials) and record numbers in which the candidate has had complete charge, responsibility and activity in all phases of the patient's care. These reports must be typewritten on 8½-by-11-in. paper and in duplicate but need not be on any special form. Please file the duplicate in your own office. This second copy will be called for when and if it is needed.

Complete index lists must accompany the reports. If they are obtained from more than one hospital a separate index list of each group should be provided. These lists must state the operator's name at the head of each page, the name (or initials) of the patient, the hospital number, and the name and date of operation. Statements from the administrators of the hospitals attesting that the candidate was the operator must be included.

The applicant must personally prepare the case reports, remembering that they are documentary evidence of his ability and that the material in them and the manner of presentation are important evidences of his competence as an urologist.

The case reports must be received on or before September 1.

B. Written Examination: The written examination is designed to test the candidate's preparation in and his knowledge of the whole field of urology, including the subjects: clinical urology, pathology, anatomy, physiology, embryology, bacteriology, physiological chemistry, and endocrinology. These may be held on certain dates simultaneously in different parts of the country at places convenient for candidates.

C. Pathology: The examination in pathology will consist of the identification of gross specimens and of sections of tissue observed through the microscope. It will be held at the time of the oral examination.

D. Oral-Clinical Examination: This will consist of discussions of urologic problems. The subjects forming the basis of this examination are urography; diseases of the genital organs, including the prostate and each portion of the urinary tract and the adrenals. It will ascertain the candidate's familiarity with recent literature, the breadth of his clinical experience, and his general qualifications for practice of urology.

The professional adaptability of each candidate will be investigated in an attempt to determine his ethical conduct and his attitude toward his patients and fellow practitioners.

NO SINGLE PANACEA FOR THE INTERNSHIP

GUEST EDITORIAL

Leland S. McKittrick, M.D.

AT THE recent meeting of the House of Delegates in San Francisco several resolutions were introduced which had as their objectives the supplying of certain hospital service functions through the means of interns. One resolution¹ suggested that since non-university affiliated hospitals were experiencing difficulty in obtaining interns in requisite number and caliber, the problem might be solved by having the American Medical Association take appropriate measures to investigate the feasibility of the use of senior medical students to replace first-year interns in affiliated hospitals, thereby making such interns available for the nonaffiliated institutions. Another resolution² pointed up the critical shortage of interns in community and municipal hospitals and proposed that medical schools adopt a policy of encouraging a reasonable percentage of graduates to seek a two-year rotating internship in such institutions. A third³ resolution indicated that the intern shortage interferes with the quality and

the quantity of service provided for patients in voluntary and municipal hospitals. It also categorically stated that "the two-year rotating internship is the best foundation for the practice of medicine, for further training in a specialty, and/or for training in the armed forces," and resolved that the American Medical Association should recommend the two-year rotating internship.

Throughout each of these resolutions the thread of emphasis is placed on supplying interns to certain hospitals for the purpose of covering the service needs of these institutions. This problem has confronted the House of Delegates and the Council on Medical Education and Hospitals ever since it was recognized that a period of hospital education and training beyond graduation from medical school is an essential experience before entering general practice or undertaking further preparation for specialty practice. It is clearly recognized that there is a need for augmentation in the number of physicians in keeping with population growth and the development of new specialty fields. Unfortunately, however, the so-called intern-shortage has been repeatedly utilized by individuals and organizations as one of the evidences of inadequate numbers of medical graduates to the point where it has confused the real issues. Those who advocate intern needs as a measure of physician requirements fail to remember that at no time have more than 12 to 15% of the hospitals in the nation been approved for intern education and training. Furthermore, those who imply that good medical care exists only where there are internships and/or other forms of graduate medical education forget that 85% of our hospitals do not have such programs. Such programs are no guarantee of high quality medical care unless the medical staff of a hospital and the hospital administration are exerting every effort to maintain high standards of graduate medical education wherever they are being conducted. High quality medical care is a responsibility that lies directly with the physician whenever a patient is hospitalized, regardless of the presence or absence of an intern or resident education and training program within the institution.

An editorial from THE JOURNAL which appeared in August, 1920,⁴ described "The Hospital Intern Problem" of that day in a manner that so nearly parallels the current scene that it merits full quotation, as follows:

As noted in the previous comment, 593 of the 6,440 hospitals in the United States require annually 3,420 interns, or about 400 more than are turned out this year by the medical schools. Nevertheless, these hospitals represent a very small proportion of all hospitals in the country, and the number seeking interns is increasing. It can be seen, therefore, that the number of students graduating annually is not sufficient to supply interns for all hospitals seeking them, far less to meet the demand if all general hospitals should desire to use them. This, meanwhile, is one of the bases for the claim that there is a dearth of physicians. It can readily be seen, however, that sufficient interns could not be provided for all hospitals even if the annual number of graduates exceeded by several times the normal output for this country. The intern

Chairman, Council on Medical Education and Hospitals.

1. Resolution No. 10 on Use of Senior Medical Students as Clinical Clerks to Replace First Year Interns, introduced at San Francisco Session of House of Delegates of A. M. A., June, 1958

2. Resolution No. 26 on Two-Year Rotating Internships in Community and Municipal Hospitals, introduced at San Francisco Session of House of Delegates of A. M. A., June, 1958.

3. Resolution No. 27 on Plan to Promote Improved Intern Education and to Correct the Shortage of Interns, introduced at San Francisco Session of House of Delegates of A. M. A., June, 1958.

4. The Hospital Intern Problem, Editorial, J. A. M. A. 75: 418 (Aug. 7) 1920.

5. Approved Internships—Directory of Approved Internships and Residencies, compiled by Council on Medical Education and Hospitals of the A. M. A., J. A. M. A. 168: 529 (Oct. 4), 1958.

6. Hospital Statistics, Hospitals 32: 352 (Aug. 1, pt. 2) 1958.

problem must be solved in some other way. Many hospitals, even now, are employing physicians as residents or house officers at increasing salaries or with gradually increasing privileges in the way of practice. Interns, also, should be relieved of much of the work required of them which should be done by orderlies employed for that purpose. History-writing and records, which have depended largely on intern service, can be kept up by staff physicians through the use of stenographers. It is certain that the increased demand for interns does not justify either the lowering of educational standards or a multiplication of medical schools.

Of the 6,946 hospitals in the United States today, only 867 have been approved by the Council on Medical Education and Hospitals⁵ (see this issue, page 529) for internship education and training. In 1958 these institutions offered a total of 12,325 internship positions. During that year there were 6,861 graduates from approved medical schools in the United States. However, between graduates of these schools and graduates of foreign medical schools, 10,198 of the total approved internship positions were filled. Thus in the 6,946 hospitals⁶ in the United States, territories, and possessions 867 or slightly over 12% offered internship training opportunities far in excess of the number of graduates of the medical schools. It is obvious from these figures that redistribution of interns, utilizing clinical clerks to replace interns in teaching institutions, or prolonging the internship to two years will not provide the type of panacea for supplying the extra pair of hands so keenly sought by many members of the medical profession and hospital administrators.

The whole area of medical education is undergoing transition in this rapidly changing and dynamic scene. The internship is just one facet of medical education which continues to be the focus of controversy, because its service aspects do involve medical care in those institutions where such programs have been developed. The next few years may see the disappearance of the internship in its traditional concept as further advances in keeping with knowledge and needs are made in the education of the physician. In the meantime we should not be deluded into the belief that there is some magic manipulation of the internship which can furnish the answer to meeting service functions which are the responsibility of the physician and the hospital administration when patients are admitted to hospitals for medical care.

ANNUAL REPORT AND DIRECTORY OF APPROVED INTERNSHIPS AND RESIDENCIES

The 32nd Annual Report on Internships and Residencies published in this issue of *THE JOURNAL* is based on a questionnaire issued one year ago to all hospitals with approved programs. Although these data apply to the year 1957-1958, they represent the situation on Sept. 1, 1957. The Directory of Approved Internships and Residencies contains data provided in the same questionnaire, but is an announcement of hospital programs available on July 1, 1959, for the year 1959-1960.

This 32nd Annual Report indicates that there was a modest increase in the number of approved internships and residencies offered on July 1, 1958, as compared with those announced for the previous year. The total number of hospitals now conducting approved programs has reached 1,400. Of this number, 10% (141) offer only intern training, 38% (537) offer only resident training, and 52% (722) offer both intern and resident training.

This annual report and directory serves two distinct groups of individuals. It is useful to the recent graduate in medicine who is planning his further graduate training program. It is of equal or greater use to training program directors and medical administrators dealing with broad aspects of graduate training and concerned with program trends and planning for the future.

The staff of the Council on Medical Education and Hospitals is now engaged in a study aimed at increasing the usefulness of the report and the directory. The standard questionnaire for the year 1958-1959 has been altered only to include a question on certification by the Educational Council for Foreign Medical Graduates. A supplemental questionnaire will also be used this year as a first step in this continuing study.

Among the subjects under study are a more thorough characterization of other areas of graduate training leading toward specialization such as fellowships, traineeships, and preceptorships; additional descriptive data on hospital training features such as percentage of private patients, average length of patient stay, average daily census of the individual specialty services, and the autopsy rate for each such service, and a more thorough study of the range of stipends in individual programs.

There will be a continuing effort to indicate combinations of training programs through the mechanism of the "indented listing." It may be possible to list the resident positions for each year of each program so that its vertical or pyramidal nature will be indicated.

There is now a functioning residency review committee for obstetrics and gynecology. Residency programs in pathology and thoracic surgery are still approved by concurrence of the Council and the Specialty Boards concerned. All other specialty programs as well as internships and general practice residencies are evaluated and approved by committees of leaders in each of the special fields of medicine.

While this report is prepared by the Council staff, it represents the combined efforts of the Review and Conference Committees, hospital administrators, medical educators, and the staff members of other national groups concerned with graduate medical education and training. The importance which this annual report will assume is related to the discrimination with which future questionnaire items are selected and the accuracy and completeness of the replies from hospital administrators.
