Inguinal lymph node dissection (LND) (count sides)*	5
Inguinal sentinel lymph node (SND) (count patients)*	10
Debulking	
Complex/upper abdominal debulking (including diaphragm, spleen, stomach)	20
Total debulking (including complex)	40
Gastrointestinal Procedures	
Large bowel (including LAR)	10
Total – bowel resections	20
Ostomies	5
Chemotherapy/Targeted	100 cycles

*Includes Assistant

Procedural minima have now been set for gynecologic oncology fellowships. The Accreditation Data System (ADS) will be updated by August 1, 2025, and the new minimum numbers will be in effect immediately; however, they will not be enforced until review of the 2027 graduate data to give programs time to acclimate. While it is not anticipated that programs will have difficulty meeting the new minimum numbers, any challenges should be addressed in the Major Changes and Other Updates section of the ADS Annual Update.

After August 1, 2025, programs are advised to review the updated Case Log Instructions: Gynecologic Oncology document, available on the Documents and Resources page of the [Obstetrics and Gynecology](#) section of the ACGME website.

Email questions to Executive Director [Laura Huth](#).
